Please note the following:

On page five of the bid document, under section 2.3 Specific Task Requirements, letter E, Item 2 it is noted that shampooing and deep cleaning of carpets must be completed with a steam cleaner. Further clarification regarding the definition of steam cleaning was requested and may be found below:

Though commonly called "Steam Cleaning", no actual steam is involved in the hot water extraction cleaning process, apart from steam that may escape incidentally from hot water. When the cleaning solution comes in contact with the carpet/rug, it is anywhere between 50-120 degrees Celsius, according to the heat available from the cleaning unit. For instance, in a modern truck-mounted carpet cleaning machine, water can be heated to 150+ degrees Celsius, but after passing through high pressure steel braided hose and several manifolds, the water loses much of its heat.

Professional machines range from portable machines, which use electricity to heat the water and power the water pump and vacuum motors, to larger truck mounted machines. Truck mounts are normally stationary gas/diesel engine or PTO powered machines installed in a van or truck. The portable machine is able to access difficult to reach buildings and high story floors, while the truck
