

# Historic Bridge Available for Adaptive Reuse:

## Washington Bridge (K0969) Franklin and Warren Counties, Missouri

The Washington Bridge (K0969) carrying Route 47 over the Missouri River in eastern Missouri may be available for adaptive reuse within the next 5 years. The bridge will be offered to potential recipients who must agree to accept title, preserve the bridge and features which make it historic, assume legal and financial responsibility, and hold the State and Federal agencies harmless in any liability action. If the bridge (or parts thereof) is transferred to another party, deed covenants may require the new owner to maintain or re-erect the bridge in accordance with established standards for historic bridges. **Description:** Built during the Great Depression (1934-36), this National Register of Historic Places-eligible bridge is a steel, five-span rigid-connected cantilever through-truss with a Warren web, and Warren deck-truss approach spans. It measures 2,562 feet in length with a roadway width of 22 feet curb-to-curb. The substructure consists of concrete abutments and spill-through piers with Moderne detailing.
