

181214-H02 Pre-Bid Meeting

Meeting Summary

Meeting Date: 11-28-2018

Meeting Time: 2:00 p.m.

An optional, virtual Pre-Bid Meeting was held on November 28, 2008.

Topics discussed included the following:

1. Welcome and Logistics
 - a. MoDOT Staff participants included staff members from both Central Office Design and Bridge Divisions and Southeast District from the Divisions of Design and Construction.
2. Project overview
 - a. Overview of each of the 5 Projects was provided
 - b. Pertinent Bridge and Culvert items were reviewed
 - i. Alternate Structures Bidding for Project J9S3280 Bridge A8682 (Section 0006 – Alternate A Prestressed Alternate, Section 0007 – Alternate B Steel Alternate, Wide-Flange, and Section 0008 - Alternate C Steel Alternate, Plate Girder)
 1. Although there are only two sets of Bridge Plans for the alternate structures for Bridge A8682, there are three alternates.
 2. Do not bid more than one alternate – Bidder that bid on more than one alternate will be declared irregular.
 3. Do not place a value in any of the line items for the alternates that the bidder is not bidding. Any value other than 0 that is placed in any field for the alternates the bidder is not bidding is cause to be declared irregular.
3. Contractor comments or concerns, not previously addressed:
 - a. There was a concern expressed by a contractor about the number of calendar days provided for J9P3126.
 - i. The work was inadvertently listed as Bridge Deck Replacement in the advertisement and the proposal. The project scope is actually to remove and replace the wearing surface and to do bridge repair. An addendum to correct the description of work in the proposal is being prepared. The number of calendar days provided per the JSP is 45 days and was based upon the proposed scope of work. The Bridge Division conducted an independent review of the workday study,

which indicated that the number of days was tight but within reason. The District is interested in minimizing the impacts to traffic on this facility. No adjustment to the number of work days for the project is anticipated at this time.
