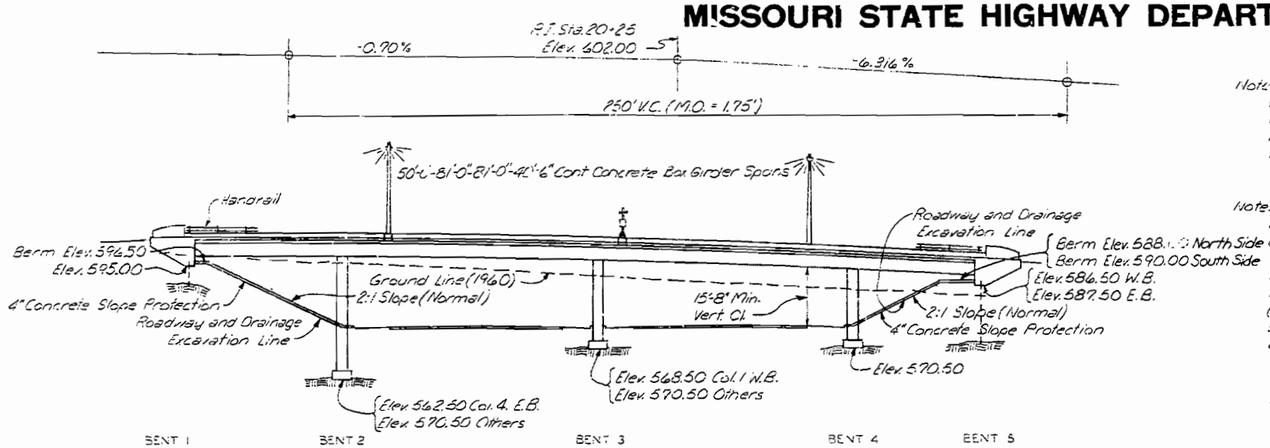
MISSOURI STATE HIGHWAY DEPARTMENT

FED. ROAD DIST. NO.	STATE	FED. AID PROJ. NO.	FISCAL YEAR	SHEET NO.	TOTAL SHEETS
5	MO.		19	12,3	



ELEVATION
(Normal to ℄ Bents)

Note: Compacted roadway fill (full roadway width) shall be placed up to the elevation of bottom of Bent 5 in front of and not less than 25'-0" in back of Bent 5 before steel piles are driven.

Note: Concrete Slope Protection shall be in accordance with Standard Specification 83.50.

Concrete Protection on front slopes at End Bents to be included under roadway items. Provide 1" Joints (Standard Specification 157.1.7) between slope protection pavement and End Bents and columns of intermediate bents. Provide ½" Joints (Standard Specification 157.1.7) between slope protection and roadway curb.

BENCH MARKS
(U.S.G.S. Datum)

#14 Spike in ½ Root 30" Elm 60' N. & 20' E. of junct. of Sessions Ave. & Spellman Ave. Elev. 610.76.

#15 Top of ℄ Bolt on Fire Hyd. at S.W. Cor. of Spellman Ave. & Big Bend Elev. 624.95.

#16 Spike in base 30" W.O. 100' N. of Companion Garden Cemetery marker & 10' W. of Marshal, Mary & William Moore marker. Elev. 615.18.

GENERAL NOTES

SPECIFICATIONS: Missouri State Highway Commission Standard Specifications, 1961 Edition.

DESIGN LOADING: In accordance with Division I of the A.A.S.H.O. Standard Specifications for Highway Bridges, 1961 Edition and 1961 thru 1964 Interim Specifications.
Live Load: H-S 20-44
Dead Load: Provision is made for a future wearing surface of 15 pounds per square foot of roadway surface.
Earth Weight: 120 lbs. per cu. ft.; Equivalent Fluid Pressure 30 lbs. per cu. ft.

DESIGN UNIT STRESSES:
Concrete in Flexure: Class B Concrete f_c = 1,200 lbs. per sq. in.
Class B1 Concrete f_c = 1,400 lbs. per sq. in.
Reinforcing Steel f_s = 20,000 lbs. per sq. in.
Steel Piles (A.S.T.M. A36) f_b = 9,000 lbs. per sq. in.

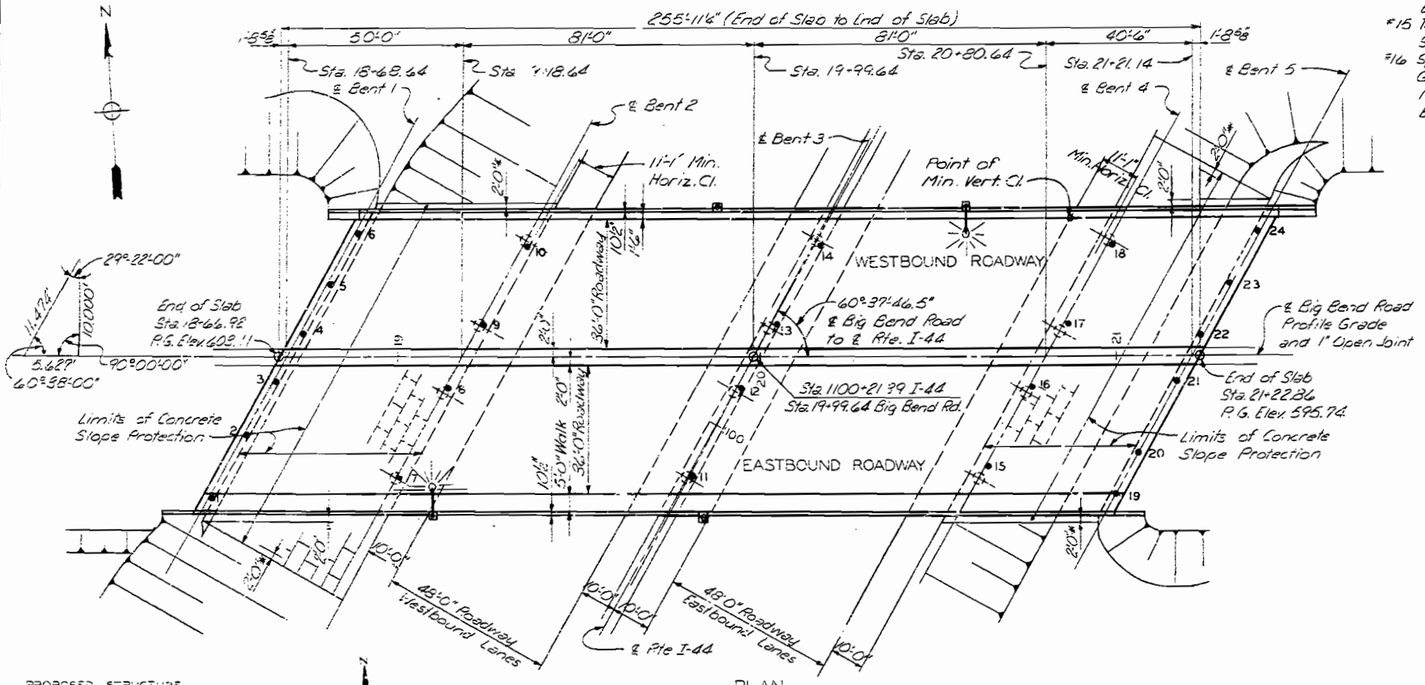
CONCRETE: Concrete for Superstructure shall be Class B1.
Concrete for Substructure (Footings of Bents 2, 3 and 4) shall be Class B.

FILLED JOINTS: Where joint filler is specified on the plans it shall conform to Standard Specification 157.2.4.

SURFACE SEALING: Superstructure deck to be surface sealed.

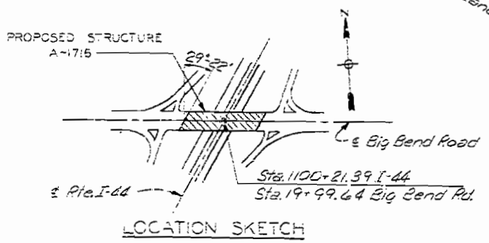
REINFORCEMENT: All dimensions to reinforcing steel on detail drawings are to center line of bar except where the clear distance is noted from the face of concrete. All reinforcing steel shall be lapped a minimum of 24 bar diameters.

PAINTING: Structural Steel access doors shall receive three coats of paint. They shall be cleaned and painted in the field or may be cleaned and painted one coat of red lead in the shop with intermediate crown coat and final coat applied in the field. Final coat on access doors and frames shall be gray. In lieu of painting, the contractor may, if he prefers, galvanize this material. All galvanizing shall be done after fabrication. Cost of painting or galvanizing to be included in price bid for other items.



PLAN

Note: • Indicates borings. For Log of Borings, see Sheet 2.
* Raise edge 3" in 2'-0".
Dimensions shown are measured horizontally.



LOCATION SKETCH

CONDUIT SYSTEM NOTES

½"φ Drain holes shall be provided at low points of conduit and junction boxes.

Payment for furnishing and placing conduit, expansion fitting, junction boxes and anchor bolts for light standards and traffic detectors shall be included in the contract lump sum price bid for "Conduit System on Structures."

Light standards, traffic detectors, wiring and fixtures to be furnished and installed by others.

All conduit to be rigid galvanized steel.

Shift reinforcing steel in field where necessary to clear conduit and junction boxes.

All junction boxes shall be flush mounted and similar or equal to O.Z. Mfg. Co. Type "YR" for parapets and Type "YT" for sidewalk.

Anchor bolts to be furnished with 2 Galvanized Std. Hex Nuts and 2 Galvanized Washers per bolt.

POURING SEQUENCE

POURING NOTES

Numbers in circles indicate the basic pouring sequence.

Longitudinal joints in roadway slabs, unless specifically on plans, will not be permitted.

The contractor shall use an approved oscillating screed type, self-propelled mechanical finishing machine and shall pour roadway slabs at a rate of not less than 25 cubic yards per hour. He shall observe the basic pouring sequence unless he can demonstrate to the engineer that he can pour and satisfactorily finish the superstructure concrete at a rate which will permit the combining of such of the basic pours as may be specifically designated by the engineer as being compatible with design. Finishing machine loads will not be permitted on concrete less than 48 hours old.

With use of forms and basic falsework meeting the approval of the engineer, the girder webs and diaphragms may be poured with the bottom slab sections on which they bear.

All forms shall be removed from the interior of box girders, except top slab forms which may be left in place.

NOTES

Work this sheet with Sheets 9 & 10.
For Slab Notes, access doors and air inlets see Sheet 7.

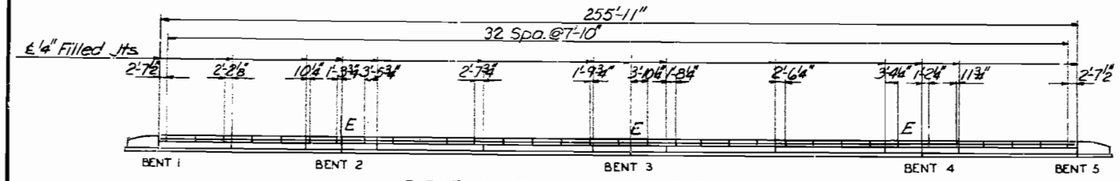
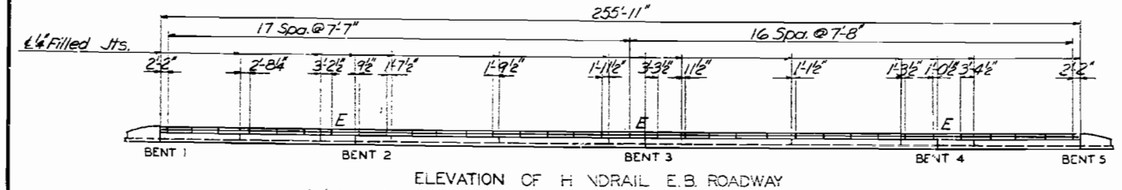
ELEVATION AT END RAIL POST

TWO-TUBE ALUMINUM RAIL



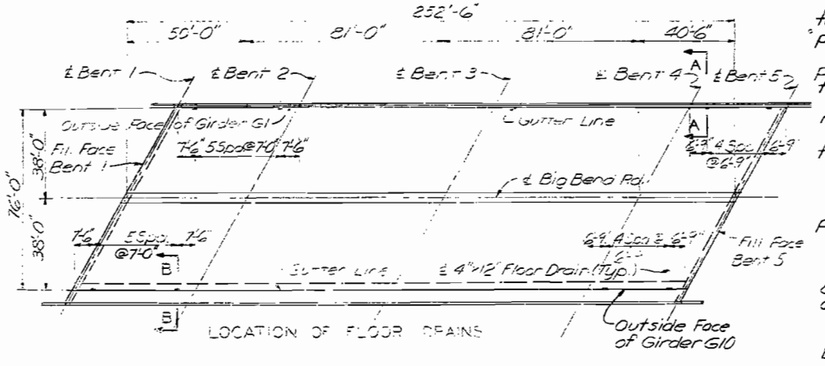
ELEVATION OF HANDRAIL W.B. ROADWAY

Note: All longitudinal dimensions are measured horizontally along outside face of parapet.
'E' indicates expansion Jt. in rail.

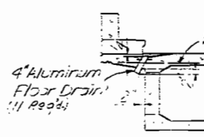


ELEVATION OF HANDRAIL E.B. ROADWAY

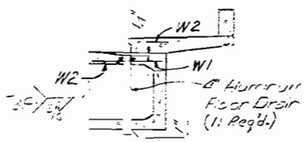
Note: All longitudinal dimensions are measured horizontally along outside face of parapet.
'E' indicates expansion Jt. in rail.



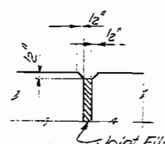
LOCATION OF FLOOR DRAINS



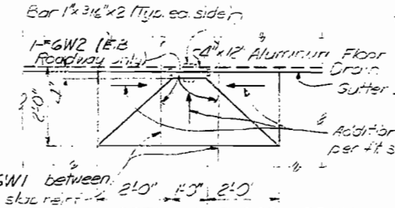
SECTION A-A



SECTION B-B



Note: Use bevel as shown for all exposed edges of joints. DETAIL OF BEVEL FOR FILLED JOINTS



TYPICAL DETAIL AT FLOOR DRAIN

DRAIN NOTES

Cut or shift transverse reinforcement in floor and shift longitudinal reinforcement to clear receiving drains.

Floor drains shall be welded ¾" aluminum sheets, A.S.T.M. B209 alloy 3003-H14 or 6061-T6.

Payment for furnishing and placing 4"x12" Aluminum Floor Drains and 4½"x12" sleeves shall be included in prime bid for other items.

Provide 4½"x12" sleeve in bottom slab under gutter. Place drains during top slab pour.

GENERAL NOTES:

All handrail posts shall be set normal to grade.

Aluminum tube handrail shall be bent to conform to vertical alignment of parapet.

Top of curbs and parapets to be built parallel to grade. Concrete end post to be vertical.

Curb and parapet joints (except at end posts) to be normal to grade.

All outside corners of aluminum posts to have ⅛" radius except as noted.

All fillets ¼" except as noted.

All drafts 3° except as noted.

Rail to be fabricated in two or three panel lengths unless otherwise approved.

All rail splices shall be located near a ¼ point between rail posts.

If the contractor desires, he may use drive fit cast aluminum end caps in lieu of welded aluminum closure plates.

See Special Provisions.

All exposed edges of end posts shall have ½" bevel. All exposed edges of curbs and parapets shall have ½" radius or ⅜" bevel.

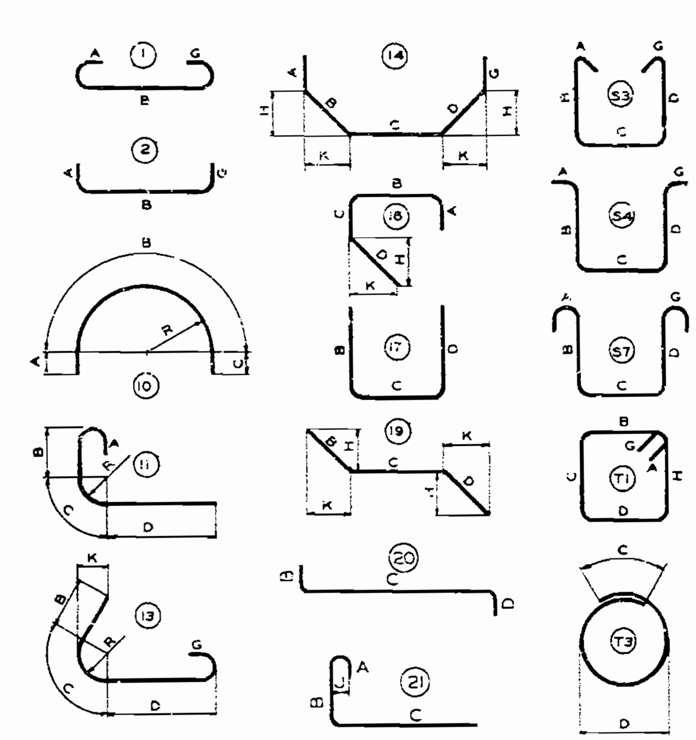
STANDARD BAR TYPES



NOTES

Bending dimensions may be considered as approximate not necessarily adding to exact total length of bars.

All dimensions are out to out, except "R" which is to inside of bend.

All bends shown are bent around a standard mandrel, except where radius "R" is indicated.

Figures in circles indicate standard bar types from A.C.I. "Manual of Standard Practice for Detailing Reinforced Concrete Structures."

Dimensioning, bending and hooks for bent bars shall conform to recommendations indicated in A.C.I. "Manual of Standard Practice for Detailing Reinforced Concrete Structures."

A dash in the appropriate dimension column indicates that a hook or portion of a standard bar type is to be omitted.

Bars marked "SP" in the type column require special bending, see detail.

Work this sheet with Sheet 14.

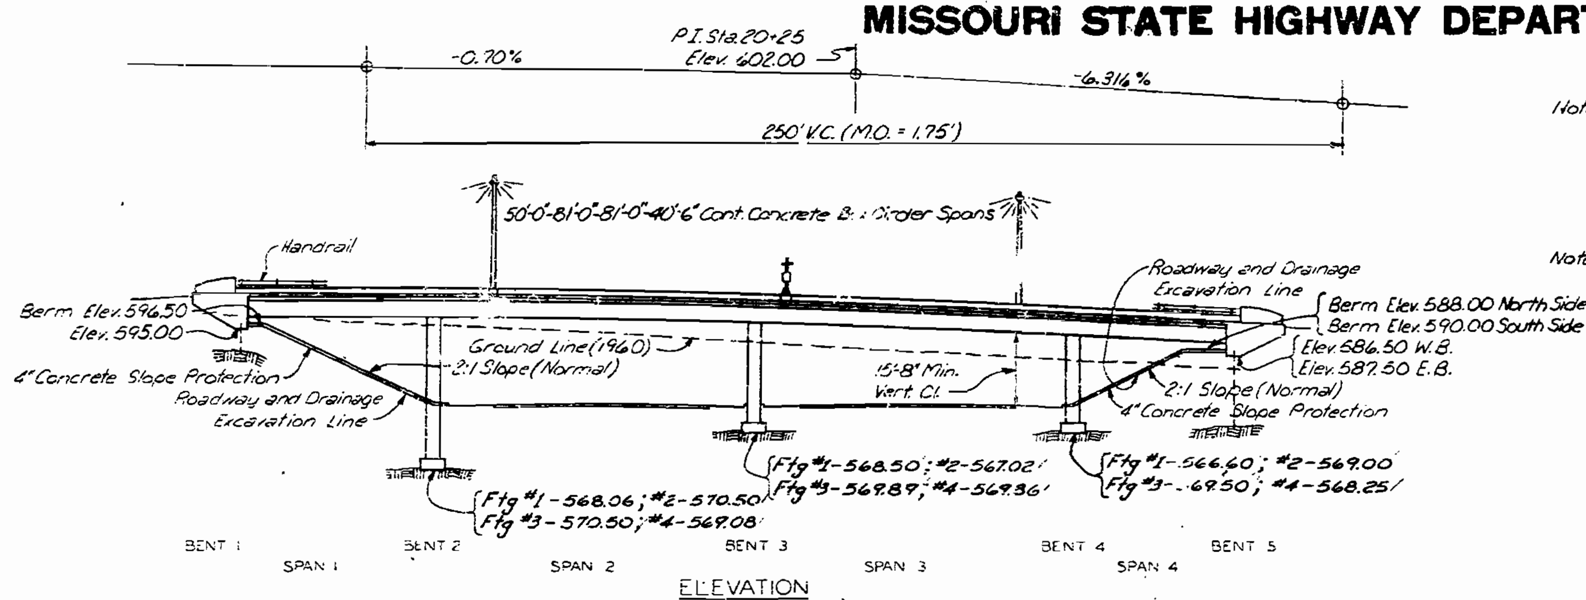
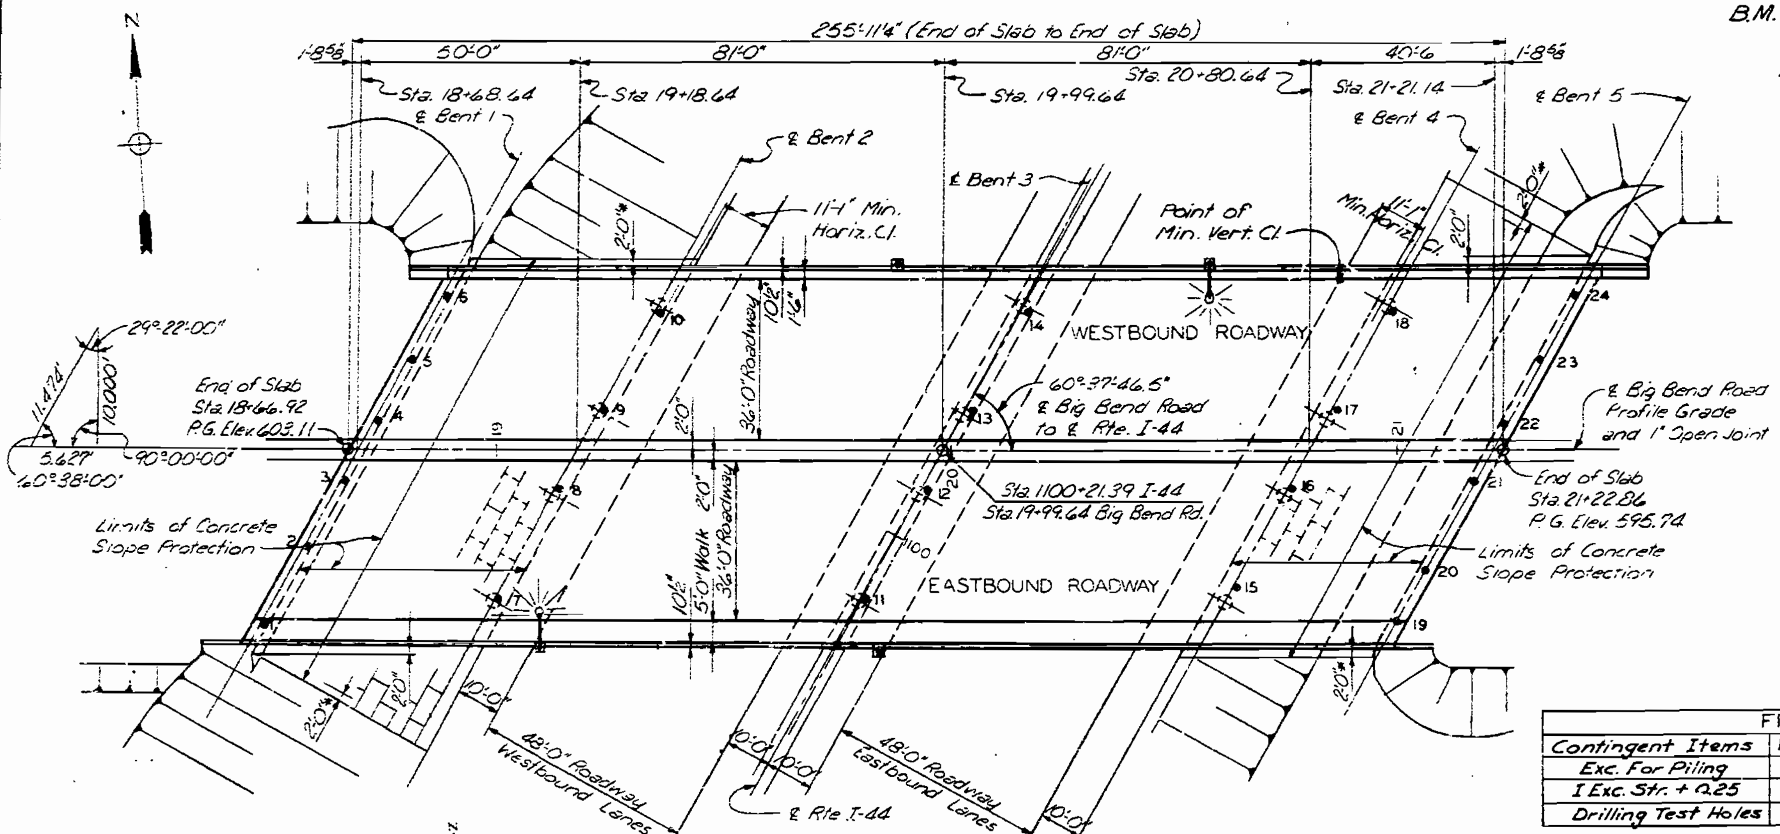
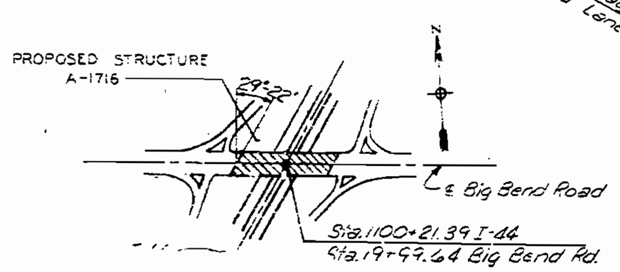
FINAL PLANS



ELEVATION
(Normal to ℄ Bents)



PLAN



LOCATION SKETCH

Note: Compacted roadway fill (full roadway width) was placed up to the elevation of bottom of Bent 5 in front of and not less than 25'-0" in back of Bent 5 before steel piles were driven.

Note: Concrete Slope Protection was in accordance with Standard Specification 83.50.
Concrete Protection on front slopes at End Bents was included under roadway items. Provide 1" Joints (Standard Specification 157.1.7) between slope protection pavement and End Bents and columns of intermediate bents. Provide ½" Joints (Standard Specification 157.1.7) between slope protection and roadway curb.

BENCH MARKS
(U.S.G.S. Datum)

GENERAL NOTES

FINAL PLANS

SPECIFICATIONS: Missouri State Highway Commission Standard Specifications, 1961 Edition.

DESIGN LOADING: In accordance with Division I of the A.A.S.H.O. Standard Specifications for Highway Bridges, 1961 Edition and 1961 thru 1964 Interim Specifications.
Live Load: H.S 20-44
Dead Load: Provision is made for a future wearing surface of 16 pounds per square foot of roadway surface.
Earth Weight: 120 lbs. per cu. ft.; Equivalent Fluid Pressure 30 lbs. per cu. ft.

DESIGN UNIT STRESSES:
Concrete in flexure: Class B Concrete — f_c = 1,200 lbs. per sq. in.
Class B1 Concrete — f_c = 1,600 lbs. per sq. in.
Reinforcing Steel — f_s = 20,000 lbs. per sq. in.
Steel Piles (A.S.T.M. A36) — f_b = 9,000 lbs. per sq. in.

CONCRETE: Concrete for Superstructure was Class B1. Concrete for Substructure (Footings of Bents 2, 3 and 4) was Class B.

FILLED JOINTS: Where joint filler is specified on the plans it was conform to Standard Specification 157.2.4.

SURFACE SEALING: Superstructure deck was surface sealed.

REINFORCEMENT: All dimensions to reinforcing steel on detail drawings are to center line of bar except where the clear distance is noted from the face of concrete. All reinforcing steel was lapped a minimum of 24 bar diameters.

PAINTING: Structural Steel access doors did receive three coats of paint. They were cleaned and painted one coat of red lead in the shop with intermediate brown coat and final coat applied in the field. Final coat on access doors and frames was gray.

Cost of painting was [illegible] included in price bid for other items.

FOOTING AND PILE DATA							
	Bent No.		1	2	3	4	5
SPREAD FOOTINGS	Foundation Material		—	Rock	Rock	Rock	—
	Design Bearing Tons / Sq. Ft.		—	10	10	10	—
BEARING PILE	Pile Size		10BP42	—	—	—	10BP42
	Number Required		11	—	—	—	11
	Approximate Length	Ft	20	—	—	—	20
	Design Bearing	Tons	55	—	—	—	50
	Hammer Energy Required	Ft.-Lbs.	12,400	—	—	—	11,200

Note: Bearing Piles did conform to A.S.T.M. A36-66.
* Minimum energy requirement of hammer based on plan length and design bearing value of piles. Increase by the factor (W+w)/2W when the weight of the ram (W) is less than the weight of the pile (w).
All piles were driven to practical refusal.
Footings were carried 18" into soft rock and cast against vertical faces of same.

FINAL QUANTITIES				
Contingent Items	Westbound Br.	Eastbound Br.	Total	
Exc. For Piling	—	719.09	719.09	
I Exc. Str. + 0.25	20.2 c.y.	6.8 c.y.	27.0 c.y.	
Drilling Test Holes	79.0 ft.	45.0 ft.	124.0 ft.	

Note: • Indicates borings. For Log of Borings, see Sheet 2.
* Raise edge 3" in 2'-0".
Dimensions shown are measured horizontally.

Note: All concrete and reinforcement above footings was included in superstructure quantities.
No payment for excavation was allowed at Bent 5.

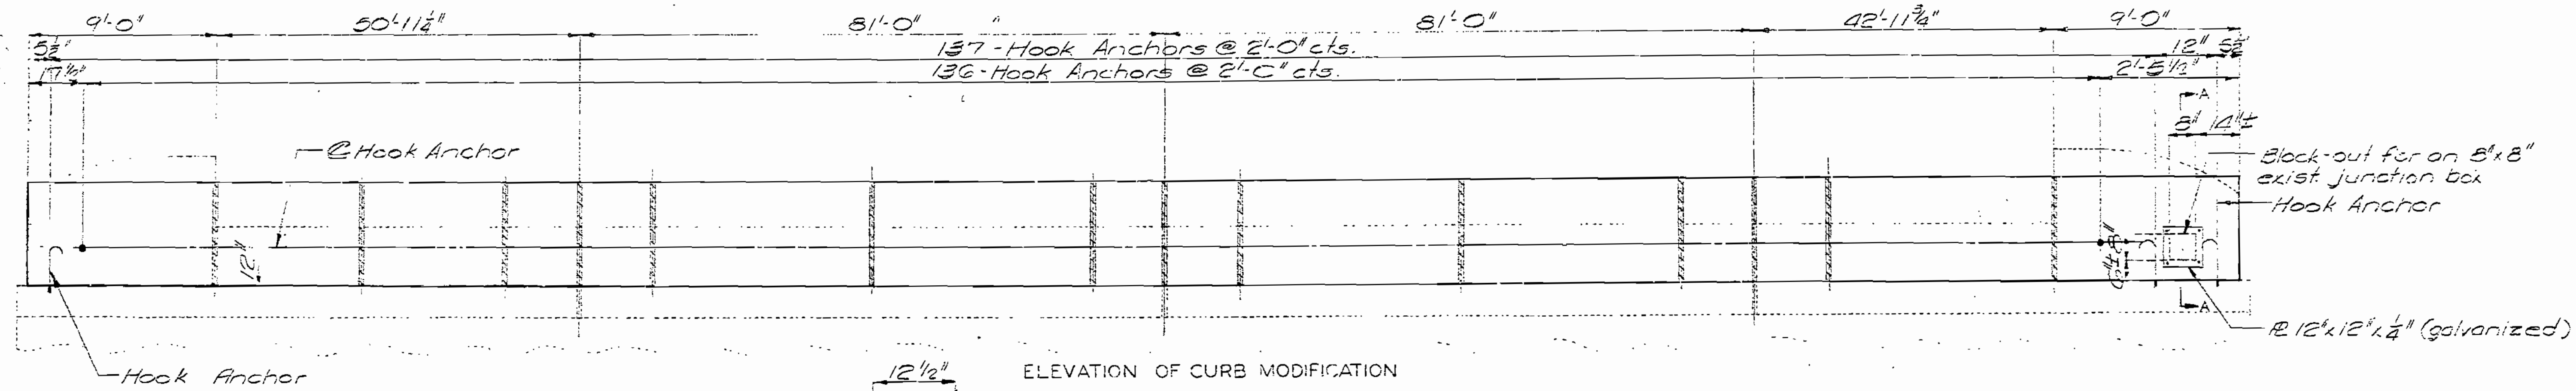
PART PLAN SHOWING CURB MODIFICATION

Note: At the option of the contractor one of the following anchor systems may be substituted for the self drilling expansion system noted on the plans: 1) Molly Parabond Capsule Anchors or 2) Hilti NVA Adhesive Anchors.
These optional anchor systems shall be installed according to the manufacturer's specifications with the following exception: A straight ¾" ⌀ reinforcing bar projecting 10" into new concrete may be substituted for the anchor bolt shown.



ELEVATION OF CURB MODIFICATION

Note: Anchors shall be of the self drilling expansion type, made of casehardened and drawn carburized steel, with self-cutting ... grooves.
Cost of furnishing and installing hook anchor bolt assemblies shall be included in price bid for curb modification.

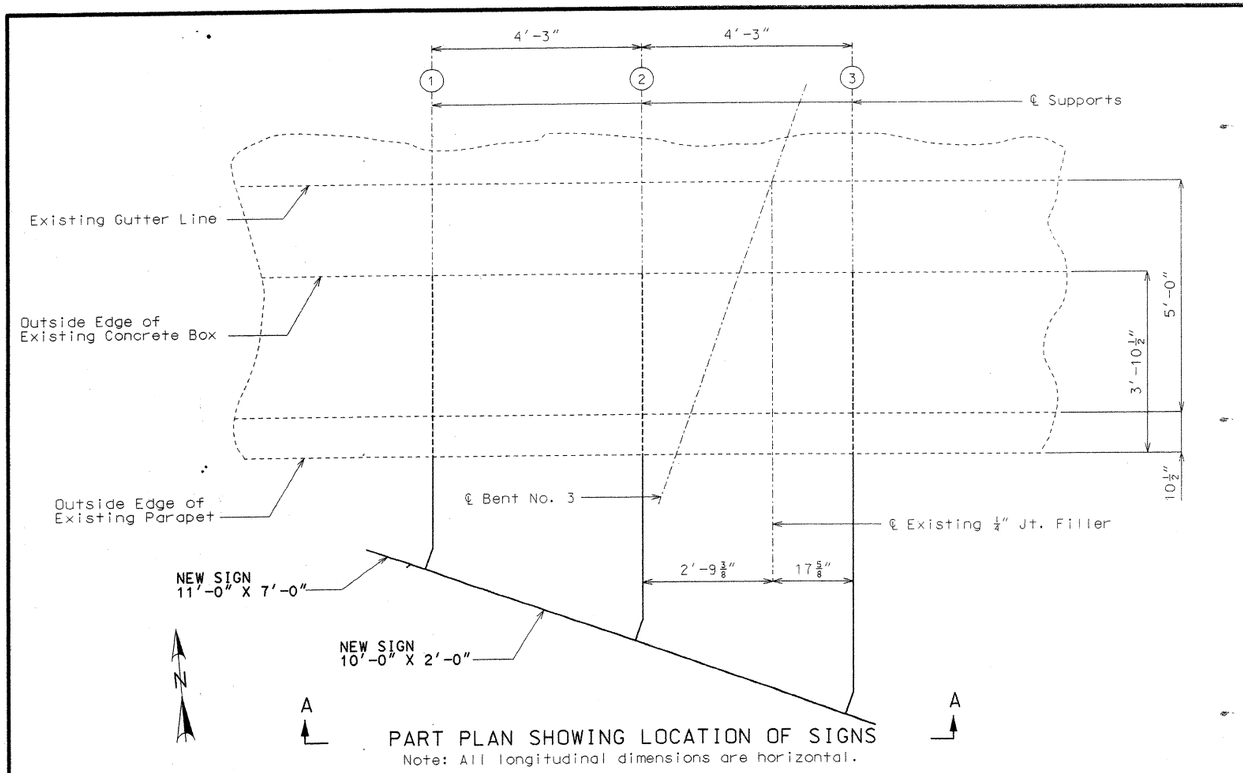
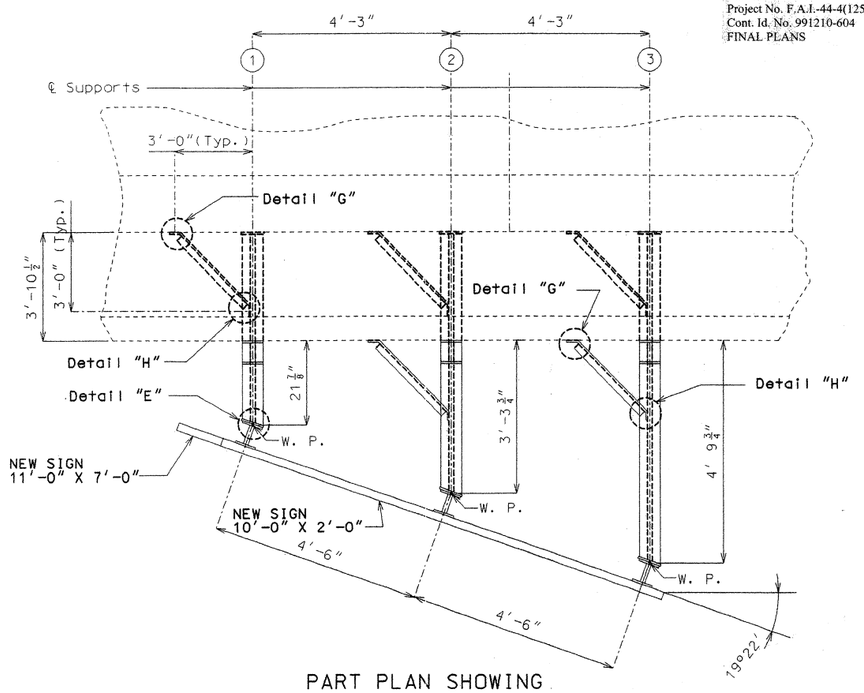
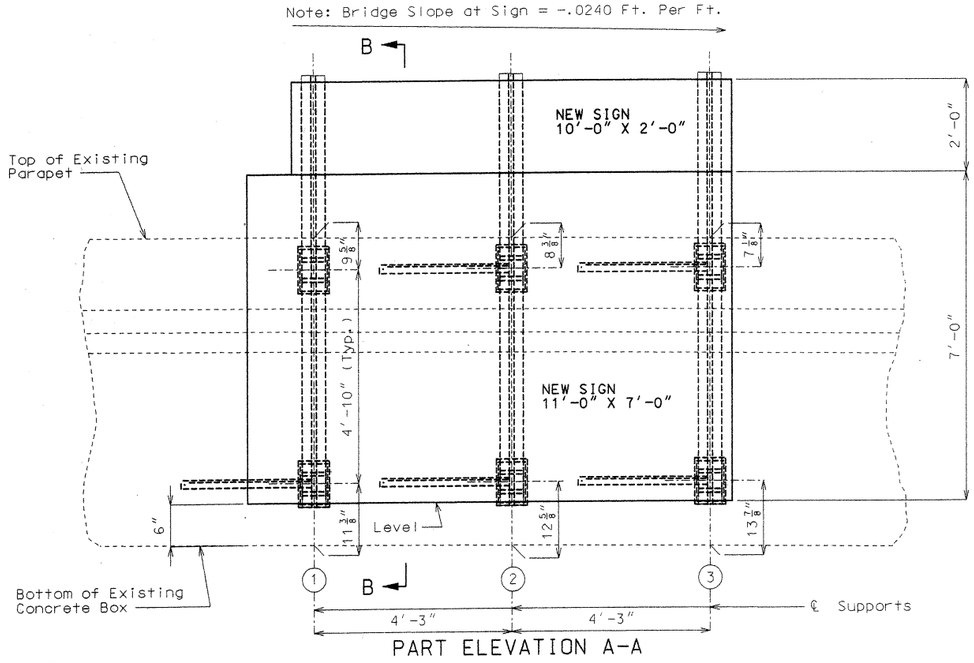
Project No. F.A.I.-44-4(125)
Cont. Id. No. 991210-604
FINAL PLANS



PART PLAN SHOWING LOCATION OF SIGNS
Note: All longitudinal dimensions are horizontal.



PART PLAN SHOWING
DIMENSIONS AND HORIZONTAL BRACING
Note: For Section B-B and Detail "E", "G" and "H" see sheet No. 2.



PART ELEVATION A-A
Note: This drawing is not to scale. Follow dimensions.

GENERAL NOTES:

Level signs on brackets.

All bolts, nuts and washers shall be galvanized.

All structural steel shall be A.S.T.M. A709, Grade 36, galvanized.

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Concrete anchors shall be the non-drilling expansion type. They shall have a certified concrete pullout strength (ultimate load) of at least 12,100 pounds in 4000 PSI concrete. The hole shall be pre-drilled with a conventional carbide masonry bit.

The contractor shall verify all dimensions in field before ordering new steel.

The cost of furnishing and erecting the sign supports shall be paid for as "Fabricated Sign Support Brackets" per pound (Rdwy. Item).

FINAL PLANS
I certify that this plan sheet accurately depicts the configuration and location of the roadway and all its appurtenant features, to the best of my knowledge, as I and my staff have observed the contractor's construction of this project. I specifically disclaim any responsibility for the design of this project, except as I and my staff may have modified or authorized the modification of the project design during its construction; and I disclaim responsibility for the contractor's actual construction of the project, except as I and my staff may have directed or ordered that the project be constructed.

FINAL PLANS

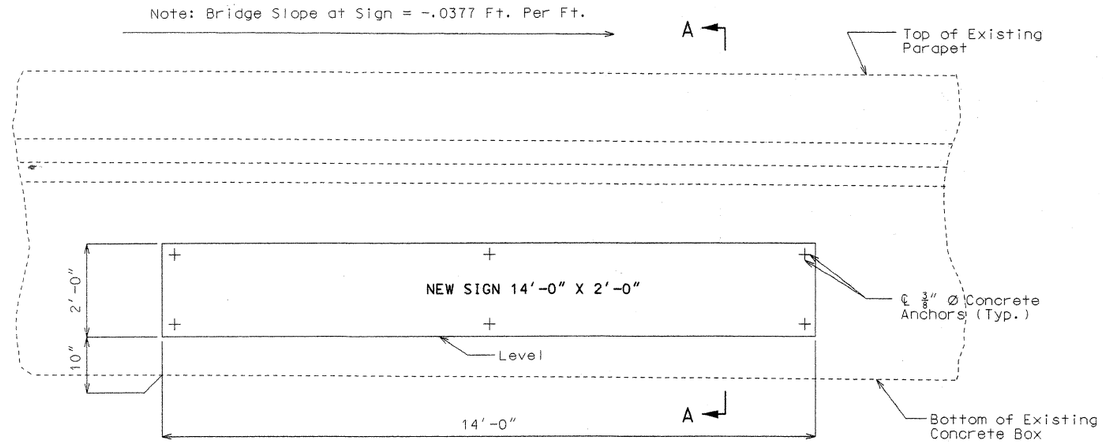
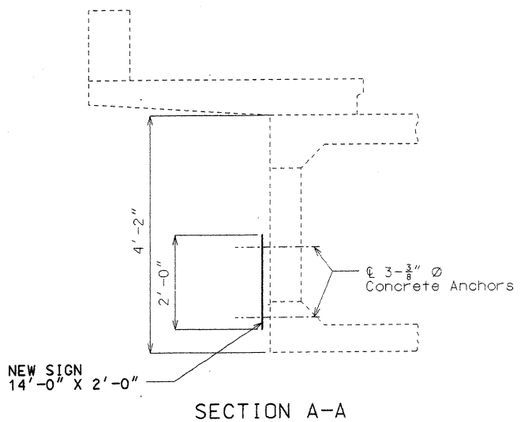
PART PLAN SHOWING LOCATION OF SIGN

Note: All longitudinal dimensions are horizontal.



PART ELEVATION B-B



SECTION A-A

GENERAL NOTES:

Center and level sign.

All bolts, nuts and washers shall be galvanized.

A 3/16 inch thick plastic washer, 7/8 inch outside diameter shall be placed on each side of the sign at all concrete anchor connections.

Concrete anchors shall be the non-drilling expansion type. They shall have a certified pullout strength (Ultimate Load) of at least 3,900 pounds in 4000 PSI concrete. The hole shall be pre-drilled with a conventional carbide masonary bit.

Existing vertical clearance sign to be removed.

See Special Provisions for removal of existing sign.

If any concrete is damaged when removing sign bracket it shall be restored with special mortar.

The existing steel not utilized shall be cut off one inch below the exposed face of the concrete.

All holes existing after sign brackets have been removed shall be filled with special mortar.

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

The contractor shall verify all dimensions in field before erecting the sign.

The cost of furnishing and erecting the sign including the concrete anchors complete-in-place, shall be paid for as "Bridge Mounting Signs Without Brackets" per each (Rdwy. Item)

FINAL PLANS
I certify that this plan sheet accurately depicts the configuration and location of the roadway and all its appurtenant features, to the best of my knowledge, as I and my staff have observed the contractor's construction of this project. SECTION THRU SLAB

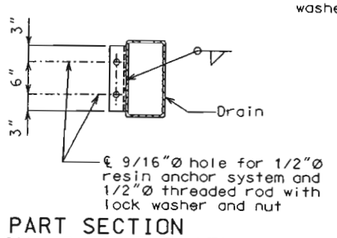
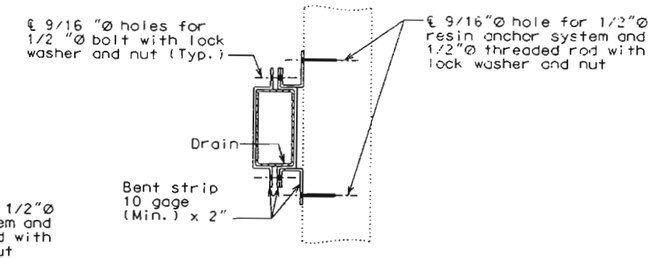
DETAIL "A"



PART SECTION SHOWING BENT PLATE



PART SECTION SHOWING BRACKET ASSEMBLY

Slab drains may be fabricated of either 1/4" welded sheets of ASTM A709 Grade 36 steel or from 1/4" structural steel tubing ASTM A500 or A501.

Slab drain bracket assembly shall be ASTM A709 Grade 36 steel.

Outside dimensions of drains are 14" x 6".

The drains and bracket assembly shall be galvanized in accordance with ASTM A123.

All bolts, hardened washers, lock washers and nuts shall be galvanized in accordance with ASTM A153.

Shop drawings will not be required for the slab drains and the bracket assembly.

The contractor shall use one of the qualified resin anchor systems in accordance with Sec 1039.

Cost of furnishing and installing the resin anchor system complete-in-place will be considered completely covered by the contract unit price for Slab Drain Extensions.

The 1/2" diameter resin anchor systems shall have a minimum ultimate pullout strength of 2500 lbs. in concrete with f'c = 4,000 psi.

General Notes:

Design Specifications:
2002-AASHTO 17th Edition
Bridge Deck Rating = 7

Verify Dimensions:
Contractor shall verify all dimensions in field before ordering materials.

Traffic Control:
See roadway plans for traffic control during construction.

Miscellaneous:
Outline of old work is indicated by dashed lines. Heavy lines indicate new work.

"Sec" refers to the sections in the standard and supplemental specifications unless specified otherwise.

Estimated Quantities

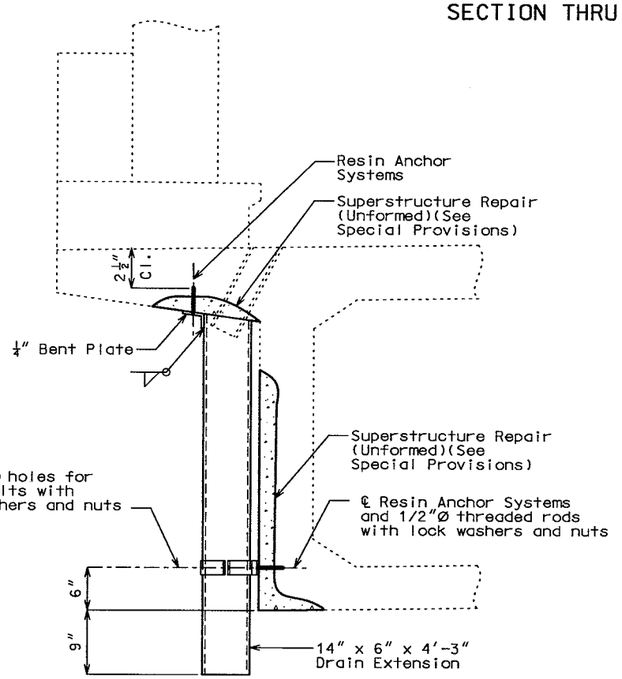
SECTION THRU SLAB



DETAIL "A"

Slab drains may be fabricated of either 1/4″ welded sheets of ASTM A709 Grade 36 steel or from 1/4″ structural steel tubing ASTM A500 or A501.

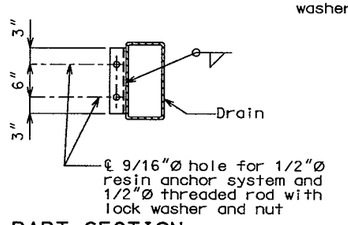
Slab drain bracket assembly shall be ASTM A709 Grade 36 steel.

Outside dimensions of drains are 14″ x 6″.

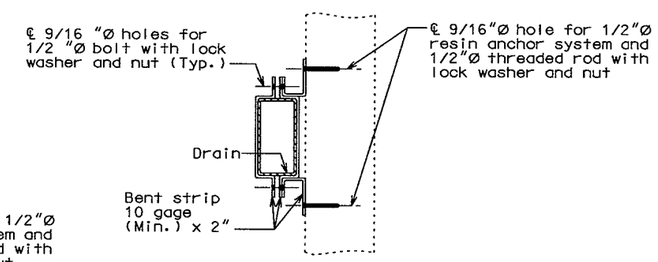
The drains and bracket assembly shall be galvanized in accordance with ASTM A123.

All bolts, hardened washers, lock washers and nuts shall be galvanized in accordance with ASTM A153.

Shop drawings will not be required for the slab drains and the bracket assembly.



PART SECTION SHOWING BENT PLATE



PART SECTION SHOWING BRACKET ASSEMBLY

The contractor shall use one of the resin anchor systems listed in the job special provisions. These anchor systems shall be installed according to the manufacturer's specifications, except as modified by the job special provisions.

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for Slab Drain Extensions.

The 1/2″ diameter resin anchor systems shall have a minimum ultimate pullout strength of 2500 lbs. in concrete with f′c = 4,000 psi, see Special Provisions.
