Concrete Mixing Trailer

<https://youtu.be/pCVkUX6gg38>

Description and Benefit

This innovation is a concrete mixing trailer that we are using when it would take longer for a concrete truck to come to the bridge where we have the job. By having this trailer, we have the job done faster and cheaper, because sometimes there are not that many square feet to fix on the bridge. On this trailer we used a few things that were available just from other equipment that didn't cost MoDOT anything extra to build this trailer.
