**April 2023**

Prepared by Transportation Planning  
Missouri Department of Transportation

## Safety Assessment For Every Roadway (SAFER)

### Description and Benefit

The SAFER tool was developed to facilitate the safety discussion throughout all phases of a project. It is not an all-inclusive list, but it is intended to serve as a reminder of some of the most common safety considerations that should be looked at on a project. As we are seeing high turnover this is attempting to be a first step in trying to fill the gap of what some newer employees may not know to consider and act as a reminder to those with more experience. The SAFER tool furthers safety by starting the discussion about various safety considerations on projects. It prompts those using it to consider things they might not have previously considered. This innovation should prompt more discussion about safety on projects and have some of those considerations included.
