

### Wing Plow Hose Relocation

#### Description and Benefit

This innovation fixes the safety issue with trying to attach the wing plow to the truck. Prior to this, employees had to lay down on the ground and try to push the hydraulic couplers on. With the new trucks that have been coming in, there wasn't a safe way to make this connection because of the DPF filter being so large and possibly burning your arm. With the hydraulic hose connection being conveniently moved closer to the outside of the truck, this enables anyone to make the connection between the wing and truck much safer.
