## Freightliner Free Flow

### Description and Benefit

A problem our shed kept running into was the freightliners we were using were not allowing the defrost or heat to work correctly, leading to a buildup of ice on our windshields. Using PVC guttering, we came up with an innovation that free flows air, designed to keep ice from blocking your cab air intake so the defroster will work. This innovation has improved our safety by keeping the windshield from frosting over, giving us a good view of the road.
