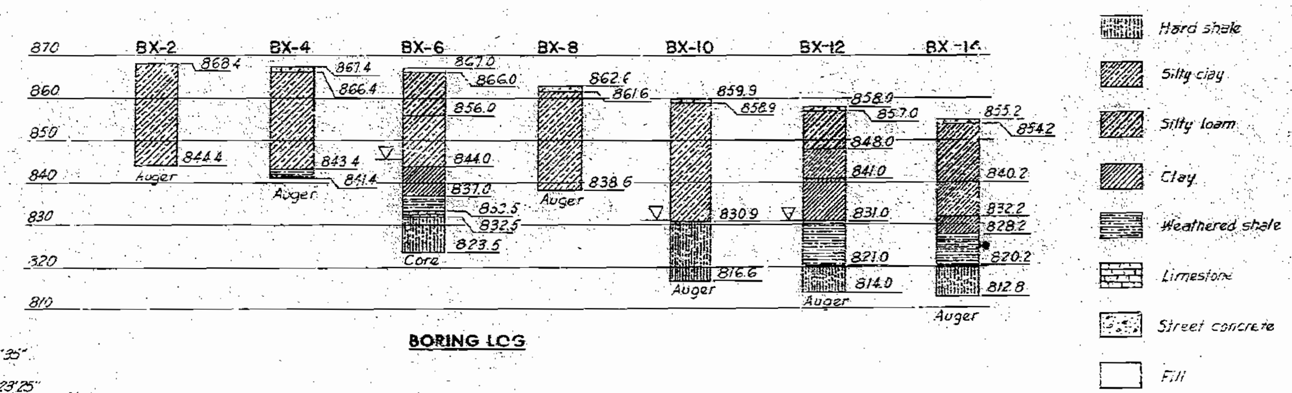
LOCATION SKETCH



BORING LOG

BORING LEGEND

Notes:
Boring log locations are noted thus: BX-2
Elevation shown at top of boring is top of ground.
Bottom elevations of borings BX-2, BX-4, BX-6, BX-12 and BX-14, are top of limestone refusal, and borings BX-6 and BX-10 are bottom in shale.
▽ indicates water level.
E. denotes East Column and W. denotes West Column.
Concrete slope protection is to be included under roadway contract. For details see sheet 14.

Bench Mark:
BM #6 - "X" Cut on S. bolt top of hydrant N.W. corner Truman Road and Charlotte Street. Elev. 856.19

GENERAL PLAN AND ELEVATION

SHEET 1 OF 14

251

GENERAL NOTES

DESIGN SPECIFICATIONS:

A.A.S.H.O. 1957 with tentative revisions for 1958 and 1959.

DESIGN LOADING

H20-44. 15 lbs. per sq. ft. future wearing surface.

CONCRETE

Concrete Stress - Class B 1 fc = 1,600 psi.
Class B fc = 1,200 psi.
Concrete for superstructure shall be Class B 1 air-entrained. Concrete for pedestal piles and substructure shall be Class B air-entrained.

REINFORCING STEEL

Allowable stress = 20,000 psi. All splices in reinforcing steel shall be 32 bar diameters.

Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.

Dimensions shown on the plans from the reinforcing steel to outside edge of concrete are all clear dimensions.

All bending dimensions are from "out to out" of bars.

SEALING OF DECKS:

Superstructure deck to be surfaced sealed. See Special Provisions.

UTILITIES:

All utilities, unless shown otherwise, shall be removed or relocated by others. The Contractor will notify the Owner of the utilities of his work schedule sufficiently in advance to allow time for disposition of utilities.

SHIPPING:

Permits must be obtained for all truck loads over legal length.

JOINT FILLER

Where joint filler is specified on the plans, it shall conform with the requirements for Gray Sponge Rubber Compound Joints as given in Section 137.2.4 of the Standard Specifications.

METAL CONDUITS:

Expansion fittings shall be required in metal conduit at all expansion joints. Expansion fittings shall be O.Z. Electrical Manufacturing Company Type AX125 with AJ bonding jumper or equal.

PILING

All piles shall conform with details and notes on Sheet No. 14.

All piles shall be driven to or into solid rock, boulders, shale, or cemented gravel, or to not less than full length authorized, and to sustain a load of at least 37 tons per pile for 10 BP 42.

All piles shall be driven with a power hammer. See Section 52.4.7 of Standard Specifications for required painting of steel piles.

WELDING:

Qualifications of welding operators will be required.

EXCAVATION TO ROCK

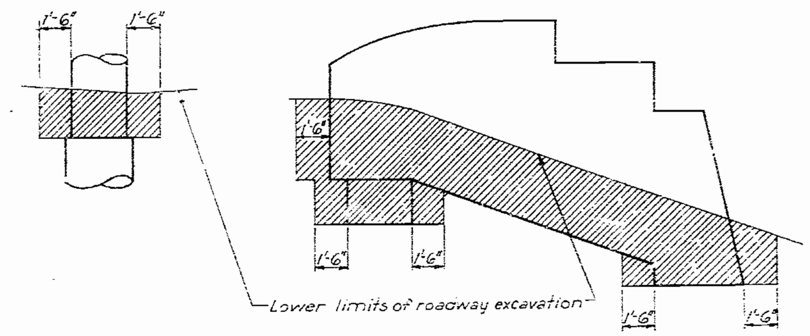
All loose, shelly or disintegrated rock shall be removed and footings or pedestal piles placed on hard, solid, undisturbed rock. If soft rock or shale is encountered the pedestal piles shall be carried at least 18" into and cast against vertical faces of same. In no case shall the pedestal piles be placed higher than elevations shown.
The maximum ultimate presumptive bearing value of 10 tons/sq. ft. was used in design of 42"φ pedestal piles on rock, and 50 tons/sq. ft. was used in design of 36"φ pedestal piles on rock.

ESTIMATED QUANTITIES

ITEM	UNIT	SUB-STRUCTURE	SUPER-STRUCTURE	TOTAL
Class 1 Excavation for Structure	Cu. Yd.	190		190
36"φ Pedestal Pile	Lin. Ft.	45.7		45.7
42"φ Pedestal Pile	Lin. Ft.	113.5 (101.3 △1)		113.5
Steel Piles in Place (10BP42)	Lin. Ft.	541		541
Steel Pile Cut-Offs (10BP42)	Lin. Ft.	84		84
Class B Concrete (Substructure)	Cu. Yd.	120.1 (121 △1)		120.1
Class B 1 Concrete	Cu. Yd.		1,162.1	1,162.1
Reinforcing Steel	Lbs.	24,150 (△1 24,820)	457,920	482,070
Fabricated Structural Steel Bearings	Lbs.		2,130	2,130
Bridge Rail (Two Tube Type)	Lin. Ft.		785	785
Conduit System (On Structure)	L. Sum			1

Revised values noted beside table: 458,890 △2; 456,[illegible] △2; △1 482,740; 482,340 △2; 483,710 △3

All excavation shall be paid for as Class 1 Excavation for Structures. Sketches below show limits of excavation for pay purposes.



All concrete and reinforcement of intermediate bents above top of pedestal piles are included in superstructure quantities.
Reinforcement in pedestal piles is included in substructure quantities.
Estimated quantity of Class B Concrete (substructure) includes all concrete in end bents. All other concrete, except for pedestal piles, is included in estimated quantity of Class B 1 Concrete.

The estimated quantities shown on plans for piles are based on the following lengths: 20' at end bent 1 and 23' at end bent 7. These lengths are approximate only. Proper lengths to give required bearing and/or penetration will be authorized by the Engineer.

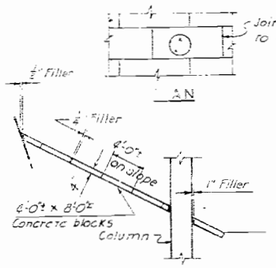
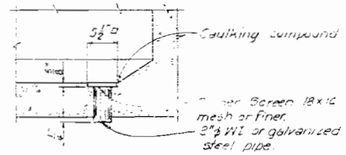
DIAPHRAGM DETAILS



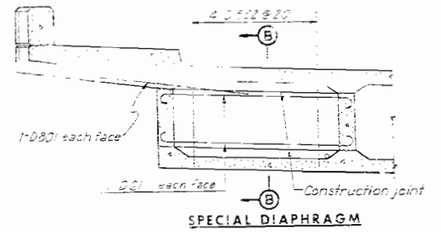
Note:
See Section 157.1.7 of Standard Specifications for filler.

SLOPE PROTECTION

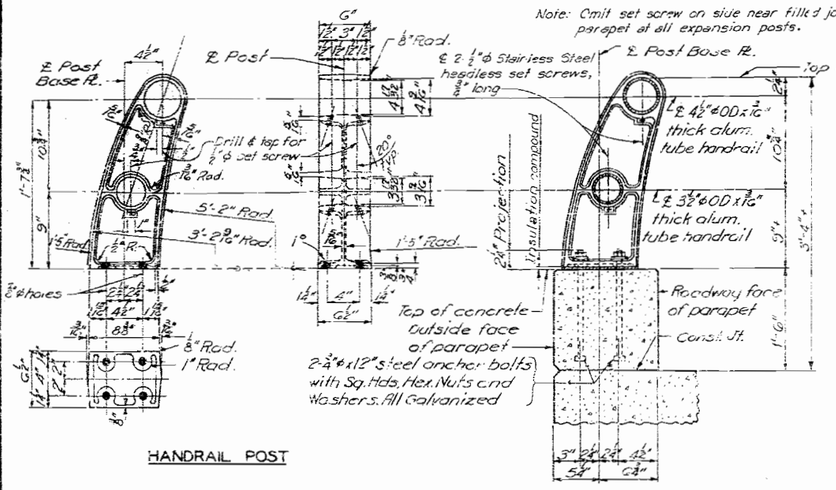


Note:
If galvanized steel pipe is used, the screen shall be aluminum.
Cost of furnishing and placing pipe, screen, and caulking compound shall be included in price bid for other items of work.

BOTTOM SLAB DRAIN



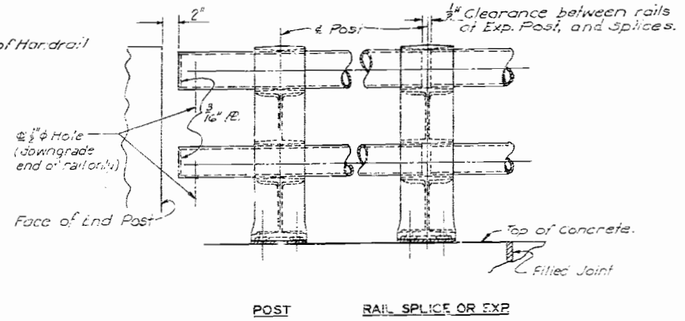
SPECIAL DIAPHRAGM



Note: Omit set screw on side near filled joint in parapet at all expansion posts.

HANDRAIL POST **SECTION THRU HANDRAIL**

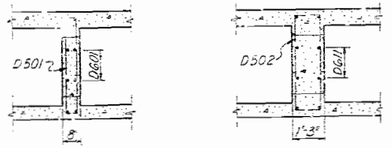
DOUBLE TUBE ALUMINUM RAILING



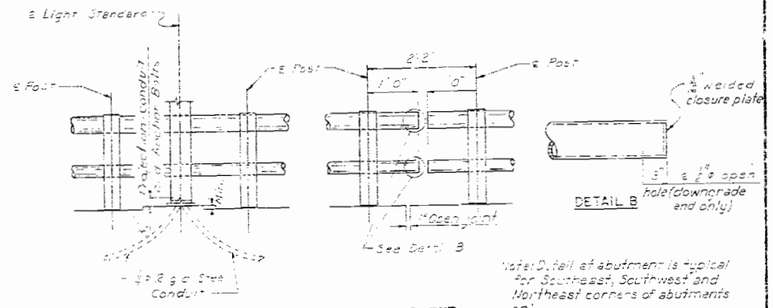
POST **RAIL SPLICE OR EXP**

TYPICAL HANDRAIL DETAILS

Note: All handrail posts shall be set normal to grade.
Aluminum tube handrail shall be bent to conform to vertical and horizontal alignment of parapet.
Aluminum washer shims between top of parapet and post base may be used for adjusting handrail alignment. Maximum thickness of shims to be ¼". Where more fitting of post is required for proper alignment, concrete bearing areas shall be ground down.
All parts of handrail except anchor bolts, nuts, washers and set screws are to be of aluminum material.
The contract unit price per linear foot of Bridge Rail shall include furnishing and erecting the handrail complete with anchor bolts, shims and insulating compound.
All fillets ¾" except as noted.
All draft 3° except as noted.
Rails to be fabricated in two or more panel lengths unless otherwise approved.
For handrail post spacing see sheet 13.



SECTION A-A **SECTION B-B**



AT STANDARD **AT ABUTMENT**

Note: Detail at abutment is typical for Southeast, Southwest and Northeast corners of abutments only.

TREATMENT OF HANDRAIL

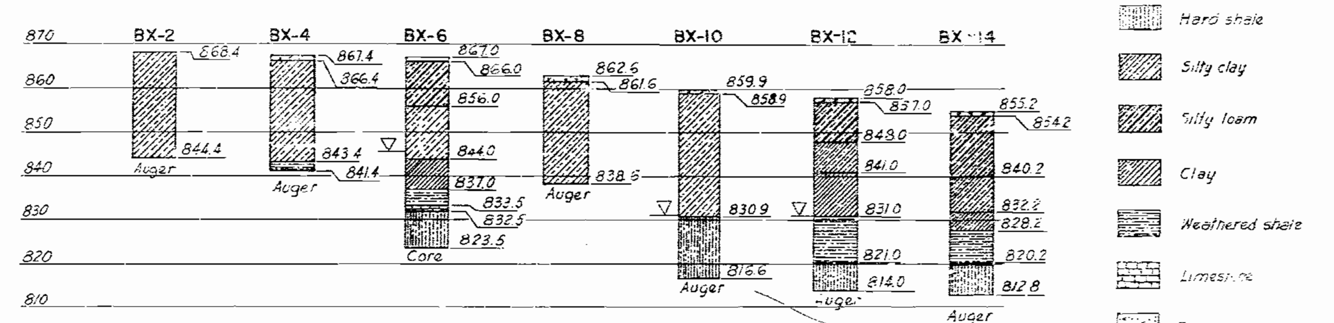
PLAN



BORING LOG

Notes:
Boring log locations are noted thus: BX-2
Elevation shown at top of boring is top of ground.
Bottom elevations of borings BX-2, BX-4, BX-8, BX-12 and BX-14, are top of limestone refusal, and borings BX-6 and BX-10 are bottom in shale.
▽ indicates water level.
E. denotes East Column and W. denotes West Column.
Concrete slope protection included under roadway contract. For details see sheet 14.
Bench Mark:
BM Northeast corner of Northwest wingwall sidewalk fillet Bent #1 Bridge A-825 Elev. 868.29.

FINAL PLANS

GENERAL NOTES

DESIGN SPECIFICATION:

A.A.S.H.O. 1957 with tentative revisions for 1958 and 1959.

DESIGN LOADING

H20-44. 15 lbs. per sq. ft. future wearing surface.

CONCRETE

Concrete Stress - Class B 1 fc = 1,600 psi.
Class B fc = 1,200 psi.
Concrete for superstructure Class B 1 air-entrained. Concrete for pedestal piles and substructure Class B air-entrained.

REINFORCING STEEL

Allowable stress = 20,000 psi. All splices in reinforcing steel 32 bar diameters.

Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.

Dimensions shown on the plans from the reinforcing steel to outside edge of concrete are all clear dimensions.

All bending dimensions are from out to out of bars.

SEALING OF DECKS:

Superstructure deck surfaced sealed. See Special Provisions.

UTILITIES:

All utilities, unless shown otherwise, removed or relocated by others. The Contractor will notify the Owner of the utilities of his work schedule sufficiently in advance to allow time for disconnecting utilities.

SHIPPING:

Permits obtained for all truck loads over legal length.

JOINT FILLER

Where joint filler is specified on the plans, it conform with the requirements for Gray Sponge Rubber Compound Joints as given in Section 157.2.4 of the Standard Specifications.

METAL CONDUITS:

Expansion fittings required in metal conduit at all expansion joints. Expansion fittings O.Z. Electrical Manufacturing Company Type AX125 with AJ bonding jumper or equal.

PILING

All piles conform with details and notes on Sheet No. 14.

All piles driven to or into solid rock, boulders, shale, or cemented gravel, or to not less than full length authorized, and to sustain a load of at least 37 tons per pile for 10 BP 42.

All piles driven with a power hammer. See Section 52.4.7 of Standard Specifications for required painting of steel piles.

WELDING:

Qualifications of welding operators required.

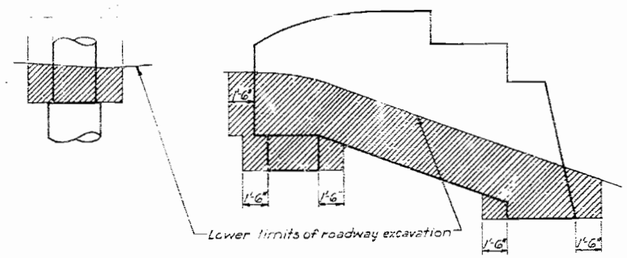
EXCAVATION TO ROCK

All loose, shelly or disintegrated rock removed and footings or pedestal piles placed on hard, solid, undisturbed rock. If soft rock or shale is encountered the pedestal piles carried at least 12" into and cast against vertical faces of same. In no case shall the pedestal piles be placed higher than elevations shown. The maximum ultimate presumptive bearing value of 10 tons/sq. ft. was used in design of 42"ϕ pedestal piles on rock, and 50 tons/sq. ft was used in design of 36"ϕ pedestal piles on rock.

QUANTITIES

ITEM	UNIT	SUB-STRUCTURE	SUPER-STRUCTURE	TOTAL	
Class 1 Excavation for Structure	Cu.Yd.	192		192	
36"ϕ Pedestal Pile	Lin.Ft.	75.9		75.9	
42"ϕ Pedestal Pile	Lin.Ft.	106.7		106.7	
Steel Piles in Place (10BP42)	Lin.Ft.	664		664	
Steel Pile Cut-Offs (10BP42)	Lin.Ft.	9		9	
Class B Concrete (Substructure)	Cu.Yd.	121		121	
Class B 1 Concrete	Cu.Yd		1164.3	1164.3	
Reinforcing Steel	Lbs.	28,050	463,440	491,490	
Fabricated Structural Steel Bearings	Lbs.		2130	2130	
Bridge Rail (Two Tube Type)	Lin.Ft.		785	785	
Conduit System (On Structure)	L. Sum			1	
15% Added Cement	Cu.Yd	96		96	Contingent
Drilled Test Holes	Lin.Ft.	76		76	Contingent

All excavation paid for as Class 1 Excavation for Structures. Sketches below show limits of excavation for pay purposes.



All concrete and reinforcement of intermediate bents above top of pedestal piles are included in superstructure quantities.
Reinforcement in pedestal piles included in substructure quantities.
Estimated quantity of Class B Concrete (substructure) includes all concrete in end bents. All other concrete, except for pedestal piles, is included in estimated quantity of Class B 1 Concrete.

The estimated quantities shown on plans for piles are based on the following lengths: 20'at end bent 1 and 25'at end bent 7. These lengths are approximate only. Proper lengths to give required bearing and/or penetration authorized by the Engineer.

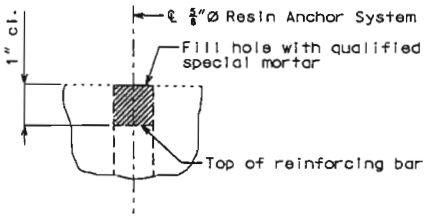
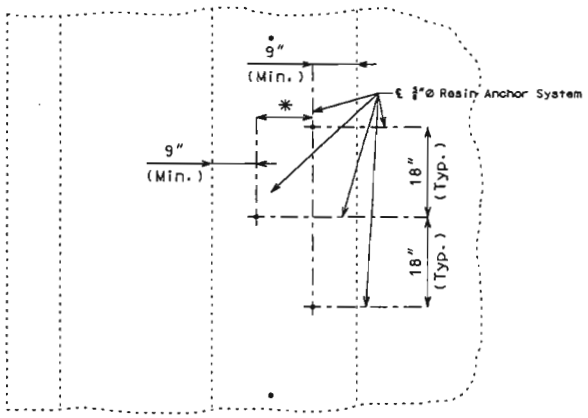
PART SECTION SHOWING RESIN ANCHORS



DETAIL "A"

Estimated Quantities			
Item		Estimated Quantities	Final Quantities
Resin Anchor System (Slab Bridges)	each	1,383	
Silicone Joint Sealant	linear foot	2,069	



PART PLAN SHOWING RESIN ANCHORS

* This dimension may be reduced to 0" to avoid rebar and voids in the slab.

GENERAL NOTES:

See Roadway Plans for traffic control.

Temporary weight shall be placed on the sidewalk in line with the resin anchors. This temporary weight shall be sufficient to balance the cantilevered sidewalk. It shall remain in place until the epoxy bonding agent is cured.

Resin Anchors:
The contractor shall use one of the qualified resin anchor systems in accordance with Sec 1039.

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for Resin Anchor System (Slab Bridges) including the qualified special mortar to cap the resin anchor.

The minimum ultimate pullout strength shall be in accordance with Sec 1039 with f'c = 4,000 psi.

An epoxy coated #5 Grade 60 reinforcing bar shall be substituted for the ⅝"Ø threaded rod stud.

The epoxy bonding agent shall extend the full length of reinforcing bar.

The Silicone Joint Sealant will be measured to the nearest linear foot. Silicone Joint Sealant, including all materials, equipment, labor and any other incidental work necessary to complete this work, will be paid for at the contract unit price for Silicone Joint Sealant.
