PROJECT DETAILS

Why is MoDOT planning changes?

The supporting elements of the bridge, built in 1961, are in good condition. However, the driving surface has deteriorated to a point where deck replacement is necessary. The new deck will span 22 feet (the existing structure is 20 feet). In addition, all four corners of the bridge will have new guardrail installed.

How will traffic be impacted?

The contractor will close the bridge to all traffic during construction, which is expected to take roughly 12 weeks.

What is the cost of the project?

The anticipated total construction and engineering cost for this project is \$1.2 Million. This is subject to change.

When is MoDOT planning to make the improvements?

At this time, the project is expected to be part of MoDOT's February 2024 letting when contractors may submit competitive bids.

Construction is anticipated to take place in 2024, however the exact schedule has not yet been determined.

As with all projects that are in the planning stage, these dates are subject to change.
