COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	5-BETTER THAN MINIMUM	12/29/2017
[Item 68] Deck Geometry Rating:	2-BASICALLY INTOLRBLE REQ	3/20/2002
[Item 69] Underclearance:	4-MEETS MINIMUM TOLERABLE	3/21/2003
Sufficiency Rating:	60.4%	2/26/2024
Deficiency:	FUNCTIONAL	3/20/2002
Funding Eligibility:	PARTIAL	----
Estimated New Structure Length:	187 FT.	----
Estimated Structure Cost:	$1,233,325	----
Estimated Total Project Cost:	$1,849,987	----
Year of Cost Estimate:	2024	----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	6-EQ TO PRESENT MIN CRITR	5/18/2001
[Item 68] Deck Geometry Rating:	6-EQ TO PRESENT MIN CRITR	11/17/2015
[Item 69] Underclearance:	4-MEETS MINIMUM TOLERABLE	3/21/2003
Sufficiency Rating:	93.0%	2/26/2024
Deficiency:	NOT DEFICIENT	11/17/2015
Funding Eligibility:		----
Estimated New Structure Length:		----
Estimated Structure Cost:		----
Estimated Total Project Cost:		----
Year of Cost Estimate:		----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

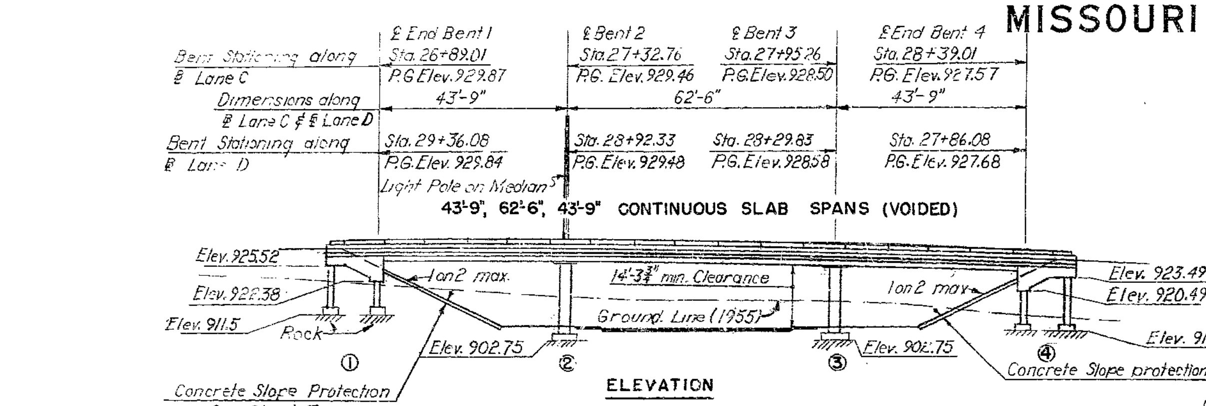
43'-9", 62'-6", 43'-9" CONTINUOUS SLAB SPANS (VOIDED)



ELEVATION

Note: All loose, shelly or disintegrated rock shall be removed and all footings placed on and at least 6" into hard, solid, undisturbed rock and cast against vertical faces of same. If soft rock or shale is encountered the footings shall be carried at least 18" into and cast against vertical faces of same. Footings of Bents 1 and 4 shall not be placed higher than elevations shown. Tops of footings of Bents 2 and 3 shall not be placed higher than 18" below the finished roadway section.

Note: Roadway excavation shall be completed on and adjacent to this site before structure is started. See Special Provisions.
See Road Plans for lower limits of roadway excavation.

ESTIMATED QUANTITIES

ITEM NO.	ITEM	UNIT	SUB-STRUCTURE	SUPER-STRUCTURE	TOTAL
1-G	Class I Excavation for Structures	Cu. Yd.	480		480
16-B	Class B Concrete	Cu. Yd.	67.3		67.3
16-B-1	Class B-1 Concrete	Cu Yd		1276.7	1276.7
17-B	Fabricated Structural Steel	lbs.		1100	1100
17-J	Aluminum Alloy Handrail	Lin. ft.		343	343
19-A	Reinforcing Steel	lbs.	6070	367,180	373,250 — 374,020
40-A	Lighting Conduit System	L.S.		1	1

367,950

NOTES:
All excavation for bridge will be paid for as Class I Excavation for Structures.
Estimated quantities of Class I Excavation for Structures includes only the amount of excavation below the limits of roadway Excavation. See Special Provisions.
Estimated quantity of Class "B" concrete substructure includes only concrete in footings. All other concrete is included in estimated quantity of Class "B-1" concrete superstructure.

GENERAL NOTES

Design specifications: A.A.S.H.O. 1953.
Construction Specifications: Missouri Standard Specifications for State Roads, Materials, Bridges, Culverts, and incidental Structures. (1955)
Design Loading: H20-S16-44 (Modified 24,000# Tandem Axle)
15#/sq. ft. future wearing Surface.
Concrete: Concrete stress: Class "B-1" 1400 psi. Class "B" 1200 psi. Concrete for superstructure shall be class "B-1" air entrained, see Special Provisions. Concrete for substructure shall be class "B" air entrained. If the Contractor desires he may use class "B-1" in lieu of class "B" for concrete in substructure with payment made on the basis of class "B" concrete.
Reinforcing steel: Allowable stress 20,000 psi.
All splices in reinforcing steel shall be 32 bar diameters: Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicated the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions. Minimum clear shall be 2" unless noted otherwise. All bending dimensions are from "out to out" of bars.
Joint Filler: Where joint filler is specified on the plans it shall conform with the requirements for gray rubber compound joints as given in Section 59-22 B of the Standard Specifications.
Paint; Shop, none; Field, contact surfaces of bolted connections (steel to steel) one coat of red lead and surfaces of steel in contact with concrete three coats of red lead. All other exposed surfaces, first coat red lead, second coat brown, third coat Aluminum. Payment for cleaning and all painting will be made under unit price bid for Fabricated Structural Steel.

Waterproofing of Decks: Superstructure decks to be waterproofed (See special provisions).
Welding: Qualification of welding operators to be required.
Utilities: All Utilities, unless shown otherwise, shall be removed and relocated by others. The Contractor will notify the owners of the utilities of his work schedule sufficiently in advance to allow time for the disposition of utilities.
Shipping: Permits must be obtained for all truck loads over legal length

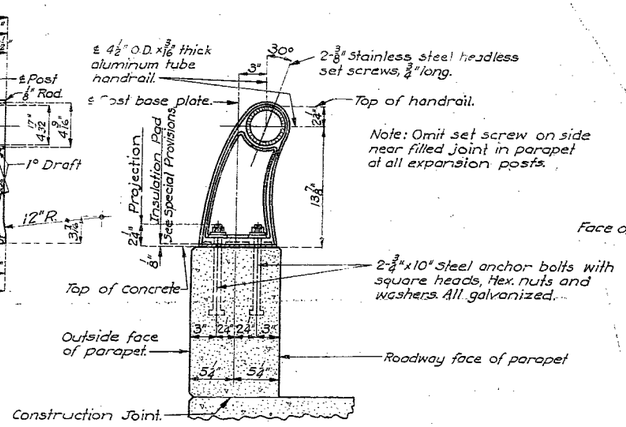
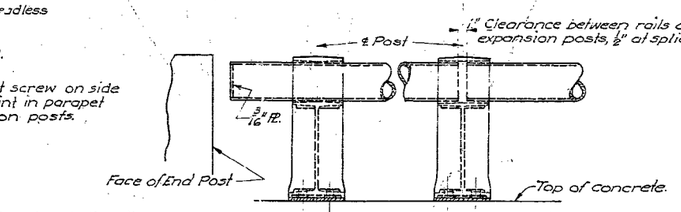
HANDRAIL POST



SECTION THRU HANDRAIL

SINGLE TUBE ALUMINUM RAILING



POST RAIL SPLICE OR EXP.

TYPICAL HANDRAIL DETAILS

Note: All handrail posts shall be set normal to grade.
Aluminum tube handrail shall be bent to conform to vertical and horizontal alignment of parapet.
Aluminum washer shims between Insulation Pad and post base may be used for adjusting handrail alignment. Maximun thickness of shims to be ⅛". Where more fitting of post is required for proper alignment, concrete bearing areas shall be ground down.
All parts of handrail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material. See Special Provisions.
The contract unit price per linear foot of "Aluminum Alloy Handrail" shall include furnishing and erecting the handrail complete with anchor bolts, shims and Insulation Pads.
All fillets ¼" except as noted.
All draft 3° except as noted.

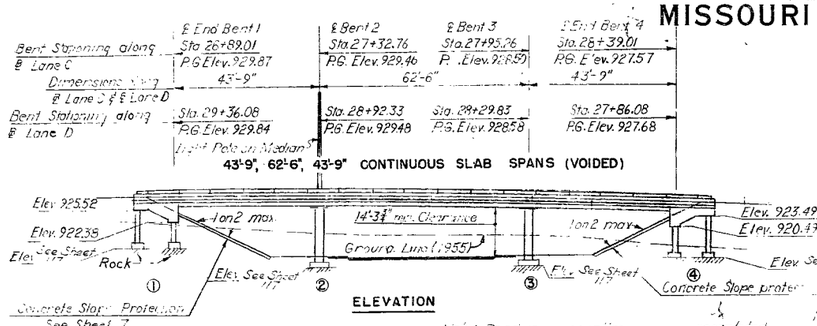
FINAL PLANS



ELEVATION

Note: All loose, shelly or disintegrated rock removed and all footings placed on and at least 6" into hard, solid, undisturbed rock and cast against vertical faces of same. If soft rock or shale was encountered the footings were carried at least 18" into and cast against vertical faces of same. Footings of Bents 3 and 4 not placed higher than elevations shown. Tops of footings of Bents 2 and 5 not placed higher than 18" below the finished roadway section.

Note: Roadway excavation completed on and adjacent to this site before structure started. See Special Provisions.
See Road Plans for lower limits of roadway excavation.

ESTIMATED QUANTITIES

ITEM NO.	ITEM	UNIT	SUB-STRUCTURE	SUPER-STRUCTURE	TOTAL
1-G	Class 1 Excavation for Structures	Cu. Yd.	381		381
16-B	Class B Concrete	Cu. Yd.	67.3		67.3
16-B-1	Class B-1 Concrete	Cu. Yd.		1280.0	1280.0
17-B	Fabricated Structural Steel	Lbs.		1130	1130
17-J	Aluminum Alloy Handrail	Lin. ft.		343	343
19-A	Reinforcing Steel	Lbs.	6070	367,950	374020
40-A	Lighting Conduit System	L.S.		1	1
	Contingent Class 1 Excavation + 25%	Cu. Yd.	37.5		37.5
	Contingent Test Holes	Lin. ft.	102		102

NOTES:
All excavation for bridge paid for as Class 1 Excavation for Structures.
Estimated quantities of Class 1 Excavation for Structures includes only the amount of excavation below the limits of roadway Excavation. See Special Provisions.
Estimated quantity of Class 'B' concrete substructure includes only concrete in footings. All other concrete is included in estimated quantity of Class "B-1 concrete superstructure.

GENERAL NOTES

Design specifications: A.A.S.H.O. 1953.
Construction Specifications: Missouri Standard Specifications for State Roads, Materials, Bridges, Culverts, and Incidental Structures. (1955)
Design Loading: H20-S16-44 (Modified 24,000# Tandem Axle)
15"/sq. ft. future wearing surface
Concrete: Concrete strength Class 'B-1' 1400 psi. Class 'B' 1200 psi. Concrete for superstructure Class 'B-1' air entrained, see Special Provisions. Concrete for substructure Class 'B' air entrained. If the Contractor desires he may use Class 'B-1' in lieu of Class 'B' for concrete in substructure with payment made on the basis of Class 'B' concrete.
Reinforcing steel: Allowable stress 20,000 psi.
All splices in reinforcing steel 32 bar diameters. Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicated the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions. Minimum clear shall be 2" unless noted otherwise. All bending dimensions are from "out to out" of bars.
Joint Filler. Where joint filler is specified on the plans it shall conform with the requirements for pre-molded bituminous joint as given in Section 59-22.5 of the Standard Specifications.
Paint; Shop, none; Field, contact surfaces of bolted connections (steel to steel) one coat of red lead and surfaces of steel in contact with concrete three coats of red lead. All other exposed surfaces first coat red lead, second coat brown, third coat Aluminum. Payment for cleaning and all painting will be made under unit price bid for fabricated structural steel.
Waterproofing of Decks: Superstructure deck waterproofed (See special provisions)
Welding: Qualification of welding operators to be required
Utilities: All Utilities, unless shown otherwise, removed and relocated by others. The Contractor will notify the owner of the utilities of his work schedule sufficiently in advance to allow time for the disposition of utilities.
Shipping: Permits must be obtained for all truck loads over legal length

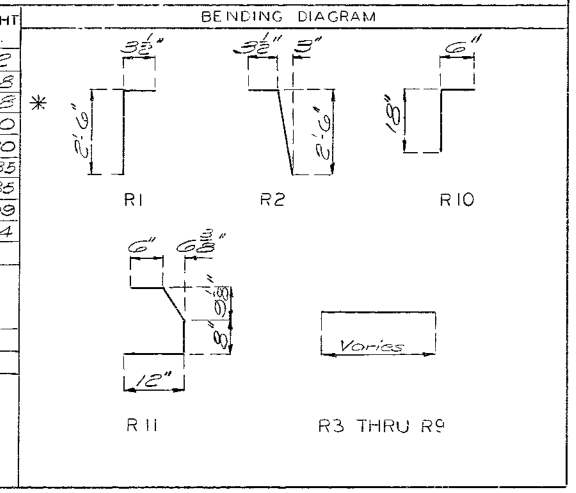
7	5 R9	32'-0"	234	
—	5 R10	23"	—	
—	5 R11	2'-11"	—	



All reinforcing steel shall be epoxy coated.

All dimensions for R-bars are out to out.

Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for Detailing Reinforced Concrete Structures stirrup and tie dimensions.

Actual lengths of reinforcing bars are measured along centerline bar and to the nearest inch.

NOTES:

Design Specifications: A.A.S.H.T.O. 1977 and Interims thru 1982

Design Unit Stresses:

Class B1 Concrete $f'_c = 4000$ psi

Reinforcing Steel (Grade 60) $f_y = 60{,}000$ psi

Joint Filler: All joint filler shall meet the requirement of Std. Spec. 1057.2.4 except as noted.

Reinforcing Steel: Minimum clearance to reinforcing steel shall be 1½" unless otherwise shown.

Traffic: Traffic over structure to be maintained during construction.

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars.

Taper roadway surfacing at bridge ends to match 1½" ± bridge overlay. (Roadway Item)

Construction Clearance: A minimum vertical clearance of 13'-6" from crown of existing lanes and a minimum lateral clearance of 32'-0" normal to ℄ 11th street centered on existing lanes shall be maintained during construction.

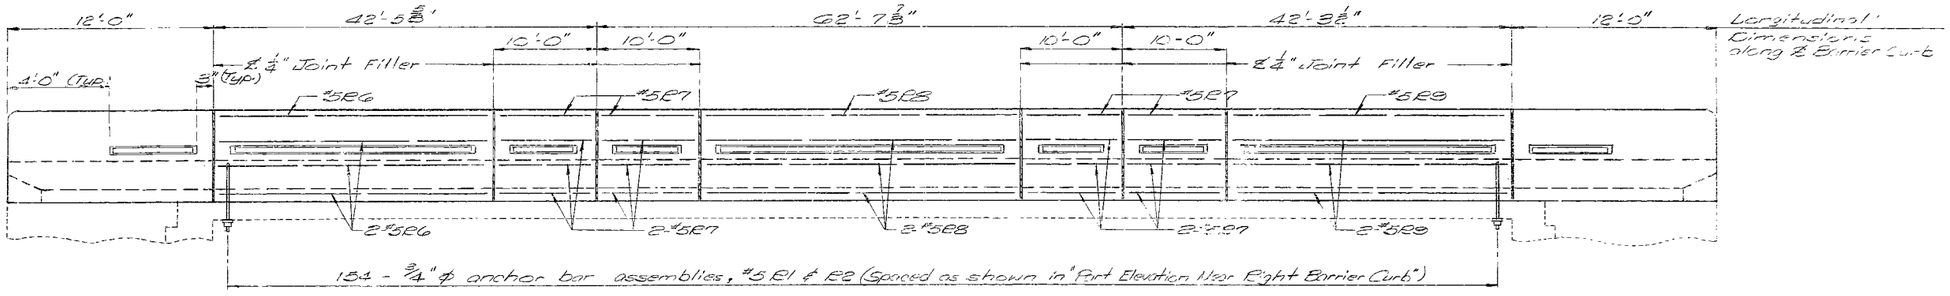
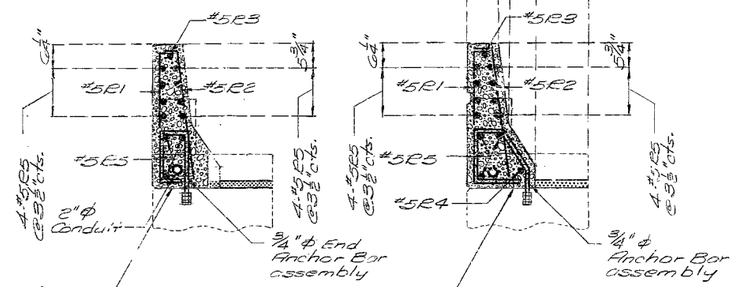
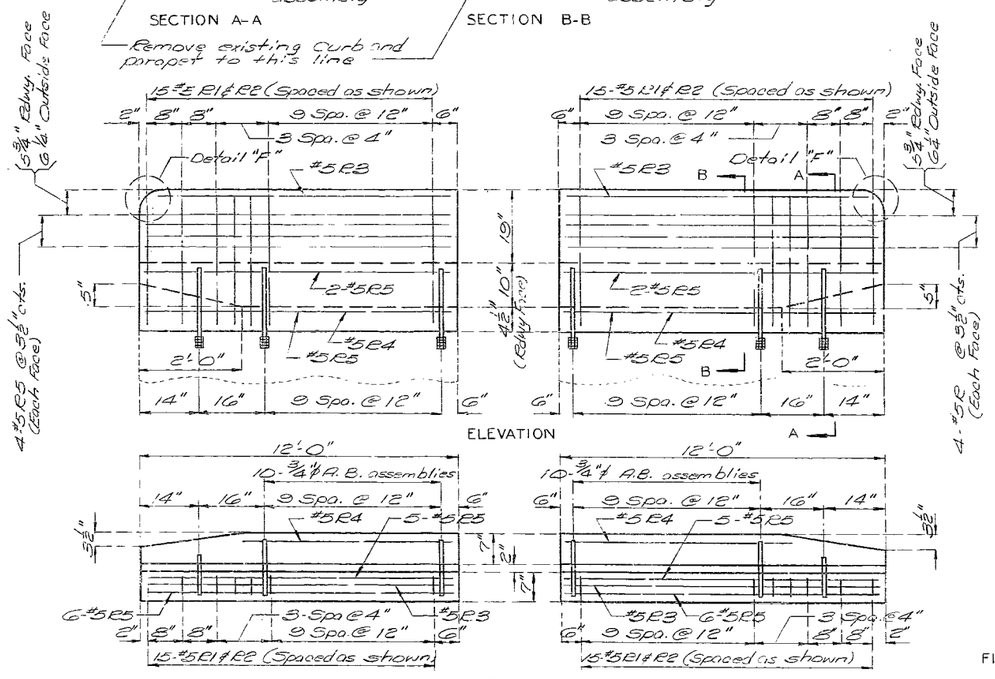
5	MO.		19	23	



Longitudinal Dimensions along ℄ Barrier Curb

ELEVATION NEAR RIGHT BARRIER CURB





Notes: Top of barrier curb to be built parallel to grade with barrier curb joints (except at end bents) normal to grade.
All exposed edges of barrier curb shall have ½" radius or ⅜" bevel unless otherwise noted.
When the barrier curb is bid by linear feet, the contract unit price shall include the cost of all concrete and reinforcement.
Concrete in the safety barrier curb shall be Class B1.
Use a minimum lap of 17" for #5 horizontal barrier bars.

Minimum clearance to reinforcing steel and anchor bars shall be 1½" unless otherwise shown.
Holes for ¾" ϕ anchor bar may be slanted slightly to miss slab reinforcement.
Concrete anchors shall be the cone expansion type for hot-dipped galvanized bolts and have a concrete pull-out strength (ultimate load) of at least 9,600 lbs. in 3000 psi concrete.
Cost of furnishing and installing concrete anchors shall be included in price bid per lin. ft. of barrier curb.
Each anchor bar (A.S.T.M. A-36) on slab deck shall be furnished with a ¼" x 2½" ℄ (A.S.T.M. A-36) cut heavy hex nut (A.S.T.M. A-307).
The entire assembly shall be galvanized in accordance with A.S.T.M. A-123 and A-153.
After the concrete in the barrier curb has set, the plate, washer and nut shall be installed and the nut tightened snug tight and the threads burred.
Cost of furnishing and installing anchor bar assemblies shall be included in the price bid per lin. ft. of barrier curb.

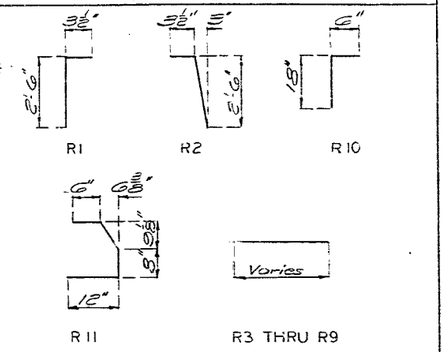
BENDING DIAGRAM



All reinforcing steel shall be epoxy coated.
All dimensions for E-bars are out to out.
Hooks and bends shall be in accordance with the CRSI Manual of Standard Practice for Detailing Reinforced Concrete Structures stirrup and tie dimensions.
Actual lengths of reinforcing bars are measured along centerline bar and to the nearest inch.

NOTES:

Design Specifications: AASHTO. 1977 and Interims thru 1983

Design Unit Stresses:

Class B1 Concrete f'_c = 4000 psi

Reinforcing Steel (Grade 60) f_y = 60,000 psi

Joint Filler: All joint filler shall meet the requirement of Std. Spec. 1057.2.4 except as noted.

Reinforcing Steel: Minimum clearance to reinforcing steel shall be 1½" unless otherwise shown.

Traffic: Traffic over structure to be maintained during construction.

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.
Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars.

Taper roadway surfacing at bridge ends to match 12" ± bridge overlay. (Roadway Item)

Construction Clearance: A minimum vertical clearance of 13'-6" from crown of existing lanes and a minimum lateral clearance of 32'-0" normal to 11th Street centered on existing lanes shall be maintained during construction.

PART PLAN OF SLAB SHOWING TITANIUM MESH CATHODIC PROTECTION SYSTEM

DENOTATIONS

- TITANIUM ANODE MESH
- SYSTEM NEGATIVE CONNECTION
- REFERENCE CELL
- GROUNDS
- EXISTING CONDUIT
- ACCESS HOLE
- EXISTING JUNCTION BOX/ ACCESS FITTING

ESTIMATED QUANTITIES	For information only	
ITEM	UNIT	QUANTITY
Titanium Anode Mesh (Elgard 210)	Sq. Feet	8608
Reference Cells	Each	3
Thermite Welds	Each	9

Note: No direct payment shall be made for any additional conduit, junction boxes, access fittings, additional material, labor and modification to existing conduit.

NOTE:

For Section B-B, typical zone layout and partial electrical schematic, see sheet no. 3.

Reference cells are to be placed at approximate ℄ of zone length as determined by the engineer.

Current Distribution Bars (C.D. Bar) to be placed near 1/4 point of Zones.

Existing overlay and cathodic protection system shall be removed and the original deck scarified prior to installation of new Cathodic Protection System (see special provisions).

NOTE:

Replace existing R/C Cabinet with new enclosure, mounted on existing apron and meeting required manufacturer's specifications and all local electrical codes.

Use existing conduit and appurtenances, with the approval of the Engineer, as shown on the plans. All existing conduit and appurtenances not used with the new Cathodic Protection System shall be removed from the Structure.

All existing wiring in the deck and conduits shall be removed and replaced with new wiring.

The anode leads, system negative return leads, reference cell and reference cell ground lead shall be routed in one of the existing conduits.

The telephone cable shall be routed into the rectifier through one of the unused existing conduits.

The reference cell ground lead shall be welded to the top rebar within 12" of the reference cell.

Anode assembly number must match zone number.

Existing access holes through deck not used with the new cathodic protection system shall have its plastic sleeve and silicone sealant removed, hole cleaned and plugged with a nonmetallic expansive mortar in accordance with Std. Spec. 1066.

TITANIUM ANODE MESH DETAILS

Notes for New Conduit and Appurtenances (if required by Engineer):
Conduit shall be schedule 40 heavy wall PVC (Polyvinyl Chloride Plastic). Each section of conduit shall bear the underwriters laboratories, inc. (UL) label.

Conduit shall be secured to concrete with clamps (galvanized/AASHTO M111) at abt. 5'-0" cts. Concrete anchors for clamps shall meet federal specification FF-S-325, group II, type 4, class 1 and shall be galvanized in accordance with ASTM A-153, B695-91 class 50 or stainless steel. Minimum embedment in concrete shall be 1 3/4". The supplier shall furnish a manufacturer's certification that the concrete anchors meet the required material and galvanizing specifications.

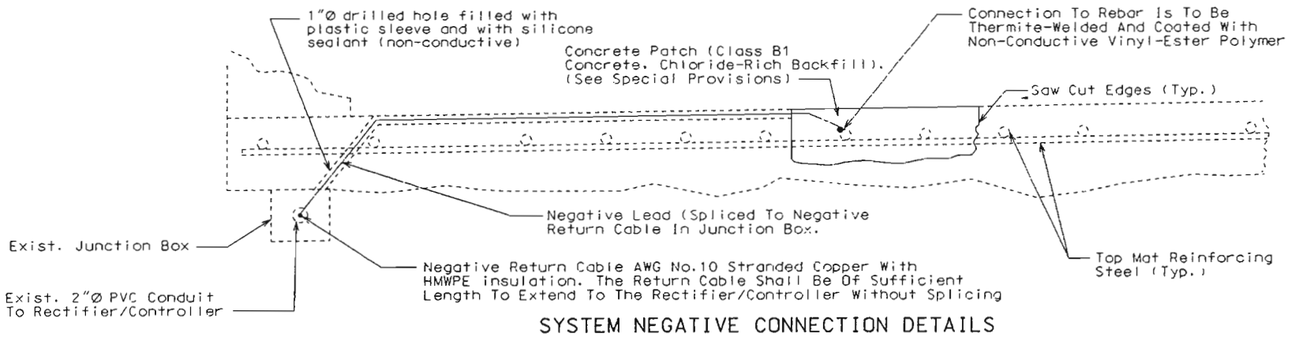
Weepholes shall be provided at appropriate locations to drain any moisture in the conduit lines.

Expansion couplings shall be installed on conduit lines between all junction boxes and access fittings as approved by the engineer.

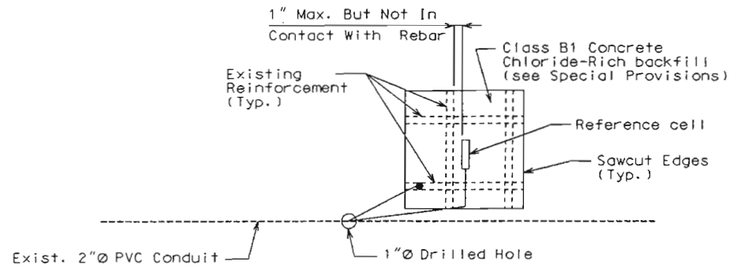
The location and direction of conduit may be shifted to meet field conditions as directed by the engineer.

All junction boxes shall be PVC molded, surface mounted, size 8" x 8" x 7" and equal to Carlon Electrical Construction products or Triangle Conduit and Cable company Inc.. The terminations shall be permanent or seperable.

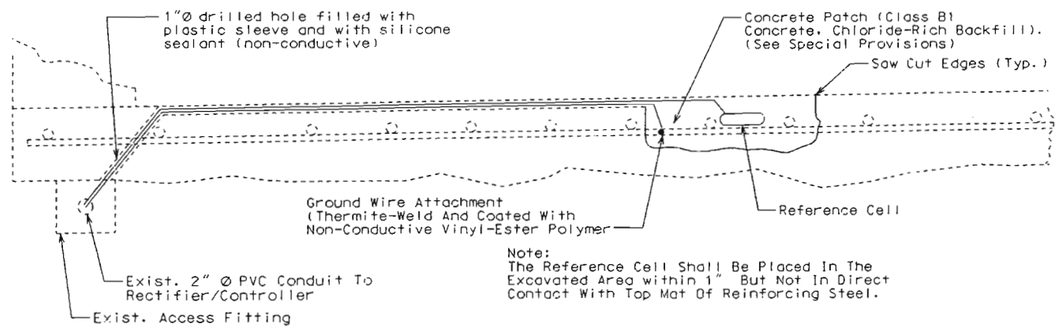
The terminations and covers shall be of watertight construction.



SYSTEM NEGATIVE CONNECTION DETAILS



PLAN OF REFERENCE CELL



REFERENCE CELL DETAILS

Note: The 3/4"Ø ground rod shall be of sufficient length to extend a minimum of 10'-0" below bottom of concrete pedestal. (Use existing if approved by the engineer).
Ground wire shall be AGW No.6 minimum (Use existing if approved by the engineer).
Knockouts or drilled holes shall be provided in cabinets for all conduit. Locations of these holes are the responsibility of the contractor and cabinet manufacturer.

Note:
All concrete removal shall be intiated by saw cutting the first 1/2".

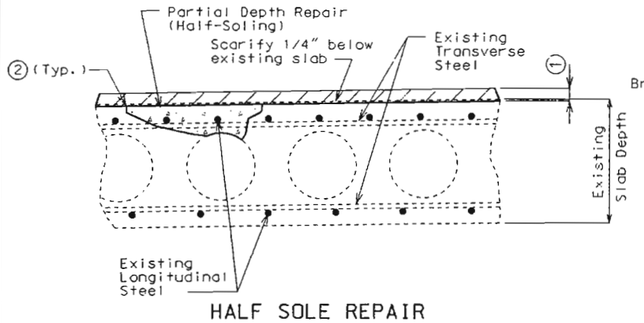
L = 424.66'



HALF SOLE REPAIR

① Install 2 1/4" (Min.) Low Slump Concrete Wearing Surface.

② Saw cut or vertically chip first 1/2" of all deck repair. (Hydroblasting allowed by special provisions.)

ESTIMATED QUANTITIES

ITEM		TOTAL
Removal of Cathodic Protection System	lump sum	1
Parapet Removal (Bridges)	linear foot	171
Asphalt Removal (Bridges)	sq. foot	7644
Protective Coating	lump sum	1
Curb Blockout	linear foot	171
Repairing Concrete Deck (Half-Soling)	sq. foot	150
Low Slump Concrete Wearing Surface	sq. yard	849
Cathodic Protection System	lump sum	1

GENERAL NOTES:

DESIGN SPECIFICATIONS:

AASHTO-1996 and Interims thru 2002

DESIGN UNIT STRESSES:

Reinforcing Steel (Grade 60) fy = 60,000 psi
Class B1 Concrete (Curb Blockout and End posts) f'c = 4000 psi

TRAFFIC HANDLING:

Maintain two lanes of traffic on structure during construction (see Rdwy. Plans.)

REINFORCING STEEL:

Minimum clearance to reinforcing steel shall be 1½", unless otherwise shown.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

JOINT FILLER:

All joint filler shall meet the requirements of Section 1057.2.4. of the Missouri Standard Specifications, except as noted.

CURB BLOCKOUTS:

Cost of Concrete and Reinforcement in End Posts shall be considered completely covered in the contract unit price for Curb Blockout per linear foot.

Cost of any concrete curb removal and/or repair shall be considered completely covered in the contract unit price for Curb Blockout per linear foot.

Cost of removing existing parapet and aluminum bridge rail shall be considered completely covered in the contract unit price for Parapet Removal (Bridges) per linear foot.

MISCELLANEOUS:

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work

Roadway surfacing adjacent to bridge ends to match top of concrete wearing surface (Rdwy. Item).

Contractor shall verify all dimensions and stations in field before ordering new material.

In order to maintain grade and a minimum thickness of overlay as shown on plans it may be necessary to use additional quantities of overlay at various locations throughout the structure. No payment will be allowed for additional labor, materials or equipment for variations in thickness of overlay.

SPECIAL REPAIR ZONES:

Any repair in the remainder of the bridge that is within 3'-0" of Zone A shall be completed before removing old concrete in Zone A.

Zones with the same letter designation may be repaired at the same time. Sequence of repairs follows Zone A. Zone B then Zone C.

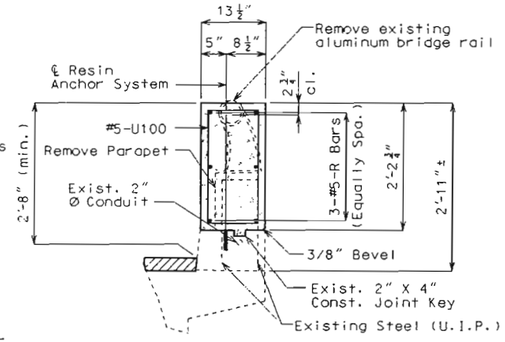
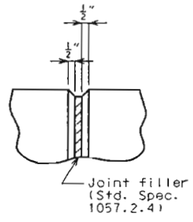
PART SECTION NEAR CURB BLOCKOUT



SECTION A-A



FILLED JOINT DETAIL

DETAILS OF CURB BLOCKOUT

NOTES FOR CURB BLOCKOUT:

All reinforcement shall be epoxy coated.

Concrete in curb blockout shall be Class B1 with f'c = 4,000 psi

Measurement of curb blockout is to the nearest linear foot measured along the top of outside edge of existing curb from end of wing to end of wing.

All exposed edges of curb blockout shall have either a 1/2" radius or a 3/8" bevel, unless otherwise shown.

Payment for concrete, reinforcing steel, resin anchor systems and any other work incidental to the curb blockout and end posts, complete in place, shall be included in the contract unit price for Curb Blockout per lin. foot.

Use a minimum lap of 2'-11" for #5 horizontal Curb Blockout bars.

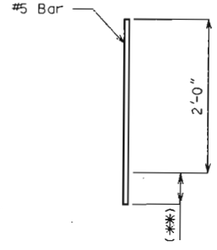
NOTES FOR RESIN ANCHOR SYSTEM:

The contractor shall use one of the resin anchor systems listed in the job special provisions. These resin anchor systems shall be installed according to the manufacturer's specifications, except as modified by the job special provisions. Contractor shall avoid damage to any exist. conduit in curb.

The 5/8" diameter resin anchor systems shall have a minimum ultimate pullout strength of 15,500 lbs. in concrete with f'c = 4,000 psi (See Special Provisions).

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for Curb Blockout.

An epoxy coated #5 Grade 60 reinforcing bar shall be substituted for the 5/8 "Ø threaded rod stud.



(Install in Curb)

NOTE: (**) Manufacturer's embedment length. (6" Max.)

PART PLAN OF SLAB SHOWING TITANIUM MESH CATHODIC PROTECTION SYSTEM

ESTIMATED QUANTITIES	For information only	
ITEM	UNIT	QUANTITY
Titanium Anode Mesh (Elgard 210)	Sq. Feet	7644
Reference Cells	Each	4
Thermite Welds	Each	12

Note: No direct payment shall be made for any additional conduit, junction boxes, access fittings, additional material, labor and modification to existing conduit.

NOTE:

For Section B-B, typical zone layout and partial electrical schematic, see sheet no. 6.

Reference cells are to be placed at approximate ℄ of zone length as determined by the engineer.

Current Distribution Bars (C.D. Bar) to be placed near 1/4 point of Zones.

Existing overlay and cathodic protection system shall be removed and the original deck scarified prior to installation of new Cathodic Protection System (see special provisions).

NOTE:

Replace existing R/C Cabinet with new enclosure, mounted on existing apron and meeting required manufacturer's specifications and all local electrical codes.

Use existing conduit and appurtenances, with the approval of the Engineer, as shown on the plans. All existing conduit and appurtenances not used with the new Cathodic Protection System shall be removed from the Structure.

All existing wiring in the deck and conduits shall be removed and replaced with new wiring.

The anode leads, system negative return leads, reference cell and reference cell ground lead shall be routed in one of the existing conduits.

The telephone cable shall be routed into the rectifier through one of the unused existing conduits.

The reference cell ground lead shall be welded to the top rebar within 12" of the reference cell.

Anode assembly number must match zone number.

Existing access holes through deck not used with the new cathodic protection system shall have its plastic sleeve and silicone sealant removed, hole cleaned and plugged with a nonmetallic expansive mortar in accordance with Std. Spec. 1066.

TITANIUM ANODE MESH DETAILS

Notes for New Conduit and Appurtenances (if required by Engineer):
Conduit shall be schedule 40 heavy wall PVC (Polyvinyl Chloride Plastic). Each section of conduit shall bear the underwriters laboratories, inc. (UL) label.

Conduit shall be secured to concrete with clamps (galvanized/AASHTO M111) at abt. 5'-0" cts. Concrete anchors for clamps shall meet federal specification FF-S-325, group II, type 4, class 1 and shall be galvanized in accordance with ASTM A-153, B695-91 class 50 or stainless steel. Minimum embedment in concrete shall be 1 3/4". The supplier shall furnish a manufacturer's certification that the concrete anchors meet the required material and galvanizing specifications.

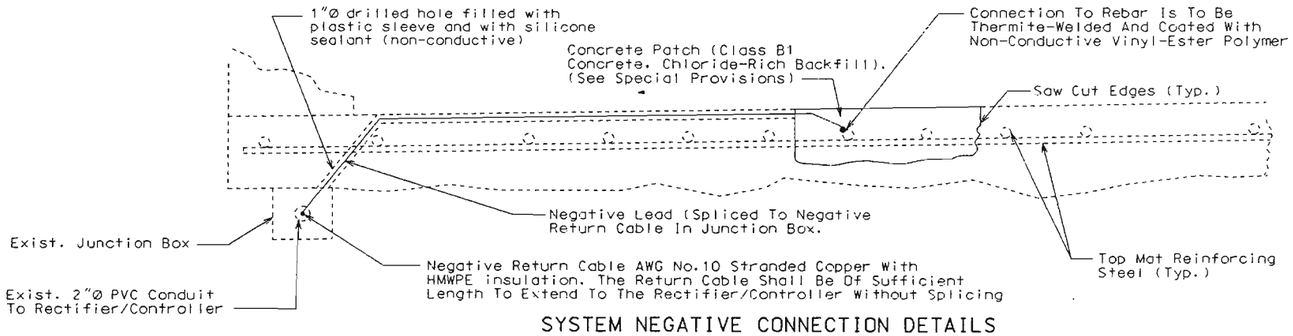
Weepholes shall be provided at appropriate locations to drain any moisture in the conduit lines.

Expansion couplings shall be installed on conduit lines between all junction boxes and access fittings as approved by the engineer.

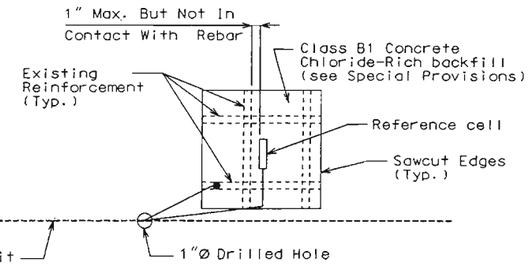
The location and direction of conduit may be shifted to meet field conditions as directed by the engineer.

All junction boxes shall be PVC molded, surface mounted, size 8" x 8" x 7" and equal to Carlon Electrical Construction products or Triangle Conduit and Cable company Inc.. The terminations shall be permanent or seperable.

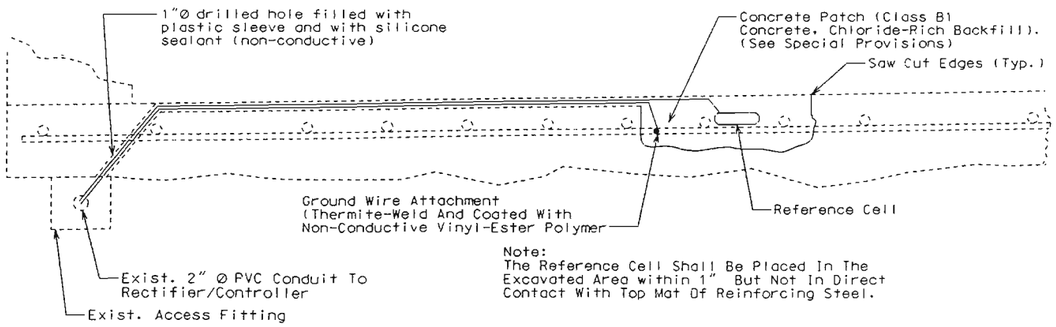
The terminations and covers shall be of watertight construction.



SYSTEM NEGATIVE CONNECTION DETAILS



PLAN OF REFERENCE CELL



REFERENCE CELL DETAILS

Note: The 3/4"Ø ground rod shall be of sufficient length to extend a minimum of 10'-0" below bottom of concrete pedestal. (Use existing if approved by the engineer).
Ground wire shall be AGW No.6 minimum (Use existing if approved by the engineer).
Knockouts or drilled holes shall be provided in cabinets for all conduit. Locations of these holes are the responsibility of the contractor and cabinet manufacturer.

Note:
All concrete removal shall be intiated by saw cutting the first 1/2".

HALF SOLE REPAIR

① Install 2 1/4" (Min.) Low Slump Concrete Wearing Surface.

② Saw cut or vertically chip first 1/2" of all deck repair. (Hydroblasting allowed by special provisions.)

FINAL QUANTITIES

ITEM		TOTAL
Removal of Cathodic Protection System	lump sum	1
Parapet Removal (Bridges)	linear foot	171
Asphalt Removal (Bridges)	sq. foot	7644
Protective Coating	lump sum	1
Curb Blockout	linear foot	171
Repairing Concrete Deck (Half-Soling)	sq. foot	1211
Low Slump Concrete Wearing Surface	sq. yard	849
Cathodic Protection System	lump sum	1

GENERAL NOTES:

DESIGN SPECIFICATIONS:

AASHTO-1996 and Interims thru 2002

DESIGN UNIT STRESSES:

FINAL PLANS

Reinforcing Steel (Grade 60) fy = 60,000 psi
Class B1 Concrete (Curb Blockout and End posts) f'c = 4000 psi

TRAFFIC HANDLING:

Maintain two lanes of traffic on structure during construction (see Rdwy. Plans.)

REINFORCING STEEL:

Minimum clearance to reinforcing steel shall be 1½", unless otherwise shown.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

JOINT FILLER:

All joint filler shall meet the requirements of Section 1057.2.4. of the Missouri Standard Specifications, except as noted.

CURB BLOCKOUTS:

Cost of Concrete and Reinforcement in End Posts shall be considered completely covered in the contract unit price for Curb Blockout per linear foot.

Cost of any concrete curb removal and/or repair shall be considered completely covered in the contract unit price for Curb Blockout per linear foot.

Cost of removing existing parapet and aluminum bridge rail shall be considered completely covered in the contract unit price for Parapet Removal (Bridges) per linear foot.

MISCELLANEOUS:

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work

Roadway surfacing adjacent to bridge ends to match top of concrete wearing surface (Rdwy. Item).

Contractor shall verify all dimensions and stations in field before ordering new material.

In order to maintain grade and a minimum thickness of overlay as shown on plans it may be necessary to use additional quantities of overlay at various locations throughout the structure. No payment will be allowed for additional labor, materials or equipment for variations in thickness of overlay.

SPECIAL REPAIR ZONES:

Any repair in the remainder of the bridge that is within 3'-0" of Zone A shall be completed before removing old concrete in Zone A.

Zones with the same letter designation may be repaired at the same time. Sequence of repairs follows Zone A, Zone B then Zone C.

FINAL PLANS

I CERTIFY THAT THIS PLAN SHEET ACCURATELY DEPICTS THE CONFIGURATION AND LOCATION OF THE ROADWAY AND ALL ITS APPURTENANT FEATURES. TO THE BEST OF MY KNOWLEDGE, AS I AND MY STAFF HAVE OBSERVED THE CONTRACTOR'S CONSTRUCTION OF THIS PROJECT. I SPECIFICALLY DISCLAIM ANY RESPONSIBILITY FOR THE DESIGN OF THIS PROJECT, EXCEPT AS I AND MY STAFF MAY HAVE MODIFIED OR AUTHORIZED THE MODIFICATION OF THE PROJECT DESIGN DURING ITS CONSTRUCTION; AND I DISCLAIM RESPONSIBILITY FOR THE CONTRACTOR'S ACTUAL CONSTRUCTION OF THE PROJECT, EXCEPT AS I AND MY STAFF MAY HAVE DIRECTED OR ORDERED THAT THE PROJECT BE CONSTRUCTED.

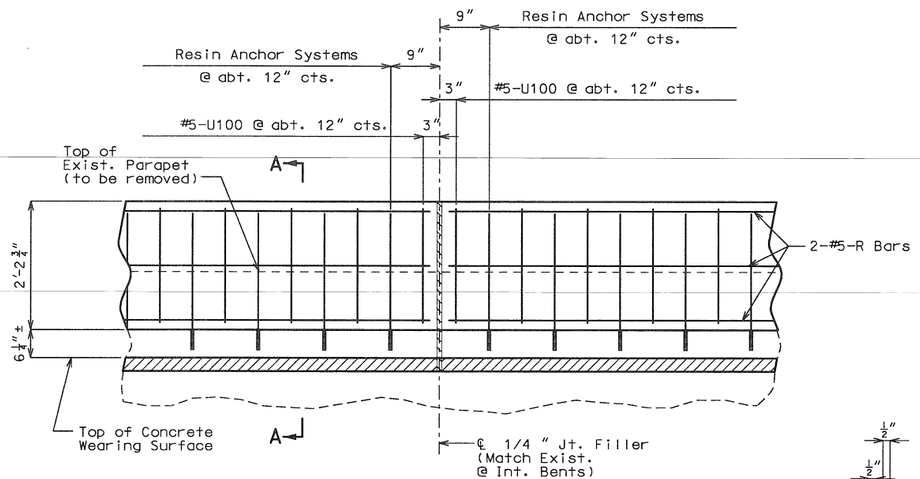
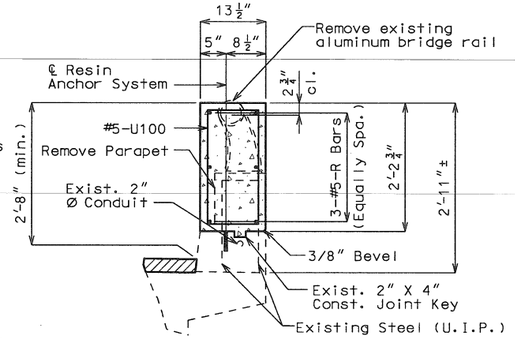
SECTION NEAR CURB BLOCKOUT

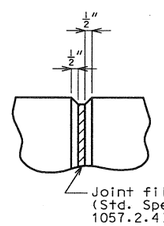
* Horizontal arc dimension along the top of outside edge of existing Curb.



PART SECTION NEAR CURB BLOCKOUT



SECTION A-A



FILLED JOINT DETAIL

NOTES FOR CURB BLOCKOUT:

All reinforcement shall be epoxy coated.

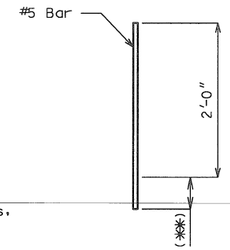
Concrete in curb blockout shall be Class B1 with f'c = 4,000 psi

Measurement of curb blockout is to the nearest linear foot measured along the top of outside edge of existing curb from end of wing to end of wing.

All exposed edges of curb blockout shall have a 1/2" radius, unless otherwise shown.

Payment for concrete, reinforcing steel, resin anchor systems and any other work incidental to the curb blockout and end posts, complete in place, shall be included in the contract unit price for Curb Blockout per lin. foot.

Use a minimum lap of 2'-11" for #5 horizontal Curb Blockout bars.



(Install in Curb)

NOTE: (**) Manufacturer's embedment length. (6" Max.)

DETAIL OF RESIN ANCHORS

NOTES FOR RESIN ANCHOR SYSTEM:

The contractor shall use one of the resin anchor systems listed in the job special provisions. These resin anchor systems shall be installed according to the manufacturer's specifications, except as modified by the job special provisions. Contractor shall avoid damage to any exist. conduit in curb.

The 5/8" diameter resin anchor systems shall have a minimum ultimate pullout strength of 15,500 lbs. in concrete with f'c = 4,000 psi (See Special Provisions).

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid for Curb Blockout.

An epoxy coated #5 Grade 60 reinforcing bar shall be substituted for the 5/8 "Ø threaded rod stud.

PART PLAN OF SLAB SHOWING TITANIUM MESH CATHODIC PROTECTION SYSTEM

FINAL QUANTITIES	For information only	
ITEM	UNIT	QUANTITY
Titanium Anode Mesh (Elgard 210)	Sq. Feet	7644
Reference Cells	Each	4
Thermite Welds	Each	12

Note: No direct payment shall be made for any additional conduit, junction boxes, access fittings, additional material, labor and modification to existing conduit.

NOTE:

For Section B-B, typical zone layout and partial electrical schematic, see sheet no. 6.

Reference cells are to be placed at approximate ℄ of zone length as determined by the engineer.

Current Distribution Bars (C.D. Bar) to be placed near 1/4 point of Zones.

Existing overlay and cathodic protection system shall be removed and the original deck scarified prior to installation of new Cathodic Protection System (see special provisions).

NOTE:

Replace existing R/C Cabinet with new enclosure, mounted on existing apron and meeting required manufacturer's specifications and all local electrical codes.

Use existing conduit and appurtenances, with the approval of the Engineer, as shown on the plans. All existing conduit and appurtenances not used with the new Cathodic Protection System shall be removed from the Structure.

All existing wiring in the deck and conduits shall be removed and replaced with new wiring.

The anode leads, system negative return leads, reference cell and reference cell ground lead shall be routed in one of the existing conduits.

The telephone cable shall be routed into the rectifier through one of the unused existing conduits.

The reference cell ground lead shall be welded to the top rebar within 12" of the reference cell.

Anode assembly number must match zone number.

Existing access holes through deck not used with the new cathodic protection system shall have its plastic sleeve and silicone sealant removed, hole cleaned and plugged with a nonmetallic expansive mortar in accordance with Std. Spec. 1066.

State	Proj. No.	Sheet No.
MO	021213-402	B20

FEDERAL PROJECT# I-70-1(175)

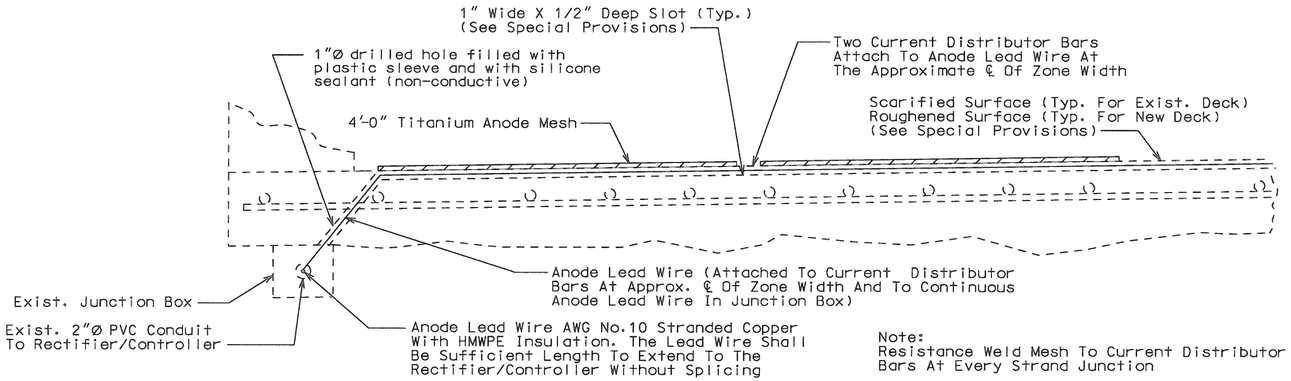
FEDERAL PROJECT# I-70-1(175)

FINAL PLANS



TITANIUM ANODE MESH DETAILS

Notes for New Conduit and Appurtenances (if required by Engineer):
Conduit shall be schedule 40 heavy wall PVC (Polyvinyl Chloride Plastic). Each section of conduit shall bear the underwriters laboratories, inc. (UL) label.

Conduit shall be secured to concrete with clamps (galvanized/AASHTO M111) at abt. 5'-0" cts. Concrete anchors for clamps shall meet federal specification FF-S-325, group II, type 4, class I and shall be galvanized in accordance with ASTM A-153, B695-91 class 50 or stainless steel. Minimum embedment in concrete shall be 1 3/4". The supplier shall furnish a manufacturer's certification that the concrete anchors meet the required material and galvanizing specifications.

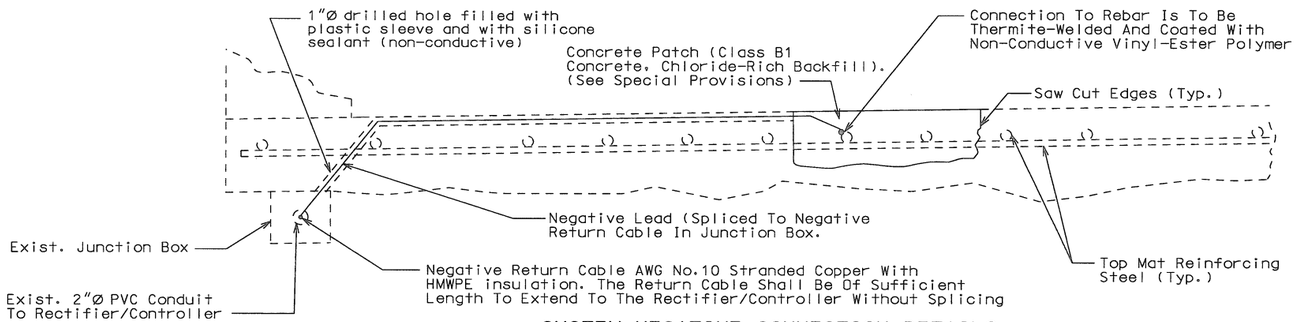
Weepholes shall be provided at appropriate locations to drain any moisture in the conduit lines.

Expansion couplings shall be installed on conduit lines between all junction boxes and access fittings as approved by the engineer.

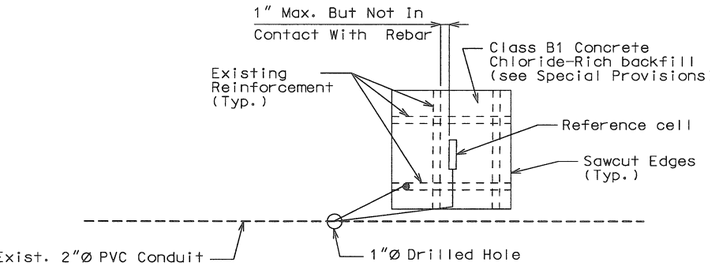
The location and direction of conduit may be shifted to meet field conditions as directed by the engineer.

All junction boxes shall be PVC molded, surface mounted, size 8" x 8" x 7" and equal to Carlon Electrical Construction products or Triangle Conduit and Cable company Inc.. The terminations shall be permanent or seperable.

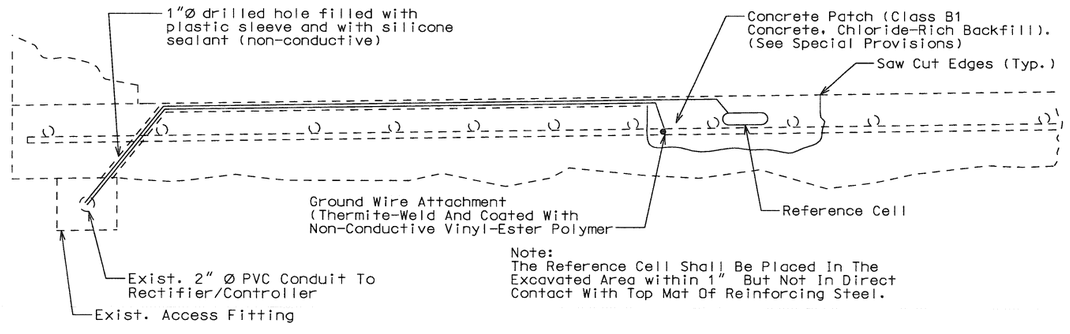
The terminations and covers shall be of watertight construction.



SYSTEM NEGATIVE CONNECTION DETAILS



PLAN OF REFERENCE CELL



REFERENCE CELL DETAILS

Note:
All concrete removal shall be intiated by saw cutting the first 1/2".

Note: The 3/4"Ø ground rod shall be of sufficient length to extend a minimum of 10'-0" below bottom of concrete pedestal. (Use existing if approved by the engineer).
Ground wire shall be AGW No.6 minimum (Use existing if approved by the engineer).
Knockouts or drilled holes shall be provided in cabinets for all conduit. Locations of these holes are the responsibility of the contractor and cabinet manufacturer.
