BRIDGE MEMORANDUM

Job No.: JNW0013 **Bridge No.:** A18021
County: Linn **Route:** B (Low Volume) over Parsons Creek

Final Layout:	U.I.P., Redeck & Make Composite Existing (40'-52'-40') Continuous Wide Flange Beam Spans
Roadway Width:	26'-0" plus 16" Type D Barriers each side
Alignment:	Tangent
Skew:	33° L.A.
Profile Grade:	Match existing ±
Loading:	H15-44 (1965), HS20-44 (New construction)
Begin Station:	364+47.50± (match existing)
Traffic Handling:	Structure to be closed during construction. Traffic to be maintained on other routes during construction. See roadway plans for traffic control.
Traffic Information:	AADT = 97 (2023), Truck = 14.6% = 14 AADT = 121 (2043), Truck = 14.6% = 18
Existing Bridge:	Redeck A1802 and use in place.
Condition Ratings:	Deck = 3, Superstructure = 6, Substructure = 7
Load Posting:	No posting required (to be maintained)

General Notes:

- Remove existing bridge deck including curbs, rails and top of wings.
- Install 6¾" CIP sliding slab with 3/16" cross slope (without precast panels), stay-in-place forms permitted.
- Increase existing haunch 1" to match existing profile grade.
- Make End Bents No. 1 & 4 semi-integral.
- Install 16" wide, Type D Barriers.
- Install Slab Drains as required.
- Install Shear Connectors to make composite.
- Apply Gray Epoxy-Mastic Primer on sides & bottom of top flange & entire bottom flange for whole length of bridge.
- Clean & Recoat existing bearings at Int. Bents No. 2 & 3.
- Clean & Recoat existing piles at Intermediate Bents No. 2 & 3 with Aluminum Epoxy-Mastic Primer.
- Install 20' Bridge Approach Slab (Minor) at End Bents No. 1 & 4.
- No conduit, lighting, utility supports, or sidewalks are to be included in the final plans.
- Existing paint system is System S over System A (lead based).
- Bridge deck may be finished with a vibratory screed. Include note B3.25 on plans.

Special Notes:

- Provide object markers at each corner of bridge (Roadway Item).
- Remove existing Bridge Approach Pavement (Roadway Item).
- Roadway surfacing adjacent to bridge ends to match top of bridge deck (Roadway Item).
- Rubblized existing bridge deck may be used on spill slopes (Roadway Item).
- An asbestos and lead inspection has been performed on this structure (A1802). Results indicate that both asbestos and lead are present. The Bridge Division will include this report in the electronic deliverables folder when submitting contract documents to the Design Division for the letting (Bridge Item).
- Girders to be recoated in a future, paint-only contract (Estimated cost of $46,300).

Estimated Working / Calendar Days = **30** / **45**
FY26 Estimated Construction Cost[1] = $407,000

[1]Does not include STIP inflation from Planning

Bridge contact is Ted Koester, SPM 573-751-4229

District contact is Brian Rosenthal, TPM 816-387-2499

GENERAL NOTES:

All handrail posts shall be set normal to grade.

Aluminum tube handrail shall be bent to conform to vertical and horizontal alignment of parapet.

Aluminum washer shims between top of parapet and post base may be used for adjusting handrail alignment. Maximum thickness of shims to be ⅛". Where more tilting of post is required for proper alignment, concrete bearing areas shall be ground down.

All parts of handrail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.

The contract unit price per linear foot of "Bridge Rail" shall include furnishing and erecting the handrail complete with anchor bolts, shims and Insulating compound.

All fillets ¼" except as noted.

All drafts 3° except as noted.

Pipe rail to be fabricated in two or three panel lengths unless otherwise approved.

Omit set screw on side near filled joint in parapet at all expansion posts.

Top of curbs and parapets to be built parallel to grade with curb and parapet joints (except at end posts) normal to grade.

Concrete end posts to be vertical.

All exposed edges of end posts, parapets and curbs shall have ½" radius.

If the contractor desires, he may use drive fit cast aluminum end caps in lieu of welded aluminum closure plates.

Integrally cast test coupons and a coat of clear lacquer specified in Std. Spec. 56.2.4 and 56.3.5 respectively will not be required for these rail posts.

COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	5-BETTER THAN MINIMUM	1/25/2005
[Item 68] Deck Geometry Rating:	6-EQ TO PRESENT MIN CRITR	3/2/2023
[Item 69] Underclearance:	N-NOT APPLICABLE	5/18/2001
Sufficiency Rating:	73.0%	3/2/2023
Deficiency:	STRUCTURAL	2/3/2015
Funding Eligibility:		----
Estimated New Structure Length:		----
Estimated Structure Cost:		----
Estimated Total Project Cost:		----
Year of Cost Estimate:		----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

OUTFALL INSPECTION INFORMATION

 # OUTFALLS: **INSPECTOR:**

STATUS: **DATE:**

NOTES:

BRIDGE MEMORANDUM

Job No.: JNW0013 **Bridge No.:** P08911
County: Linn **Route:** U (Low Volume) over Long Branch

Final Layout:	U.I.P., Redeck & Make Composite Existing (35'-35'-35') Simple Wide Flange Beam Spans
Roadway Width:	22'-0" plus 16" Type D Barriers each side
Alignment:	Tangent
Skew:	15° R.A.
Profile Grade:	Match existing ±
Loading:	H10-44 (1953), HS20-44 (New construction)
Begin Station:	325+47.00± (match existing)
Traffic Handling:	Structure to be closed during construction. Traffic to be maintained on other routes during construction. See roadway plans for traffic control.
Traffic Information:	AADT = 298 (2023), Truck = 21.6% = 64 AADT = 372 (2043), Truck = 21.6% = 80
Existing Bridge:	Redeck P0891 and use in place.
Condition Ratings:	Deck = 4, Superstructure = 5, Substructure = 6
Load Posting:	Posted for 15 tons (to be removed)

General Notes:

- Remove existing bridge deck including curbs, rails and top of wings.
- Install 6½" CIP sliding slab with 3/16" cross slope (without precast panels), stay-in-place forms permitted.
- Increase existing haunch 1/4" to match existing profile grade.
- Install concrete diaphragms at Int. Bents No. 2 & 3 to make continuous.
- Make End Bents No. 1 & 4 semi-integral.
- Install 16" wide, Type D Barriers.
- Install Slab Drains as required.
- Install Shear Connectors to make composite.
- Install cover plates to strengthen existing beams to remove load posting.
- Clean & Recoat existing piles at Intermediate Bents No. 2 & 3 with Aluminum Epoxy-Mastic Primer.
- Install 20' Bridge Approach Slab (Minor) at End Bents No. 1 & 4
- No conduit, lighting, utility supports, or sidewalks are to be included in the final plans.
- Existing paint system is System C (not lead based).
- Bridge deck may be finished with a vibratory screed. Include note B3.25 on plans.

Special Notes:

- Provide object markers at each corner of bridge (Roadway Item).
- Remove existing Bridge Approach Pavement (Roadway Item).
- Roadway surfacing adjacent to bridge ends to match top of bridge deck (Roadway Item).
- Rubblized existing bridge deck may be used on spill slopes (Roadway Item).
- An asbestos and lead inspection has been performed on this structure (P0891). Results indicate that asbestos is not present and lead is present. The Bridge Division will include this report in the electronic deliverables folder when submitting contract documents to the Design Division for the letting (Bridge Item).
- Girders to be recoated in a future, paint-only contract (Estimated cost of $37,000).

Estimated Working / Calendar Days = **30** / **45**
FY26 Estimated Construction Cost[1] = $275,000

[1]Does not include STIP inflation from Planning

Bridge contact is Ted Koester, SPM 573-751-4229

GENERAL ELEVATION

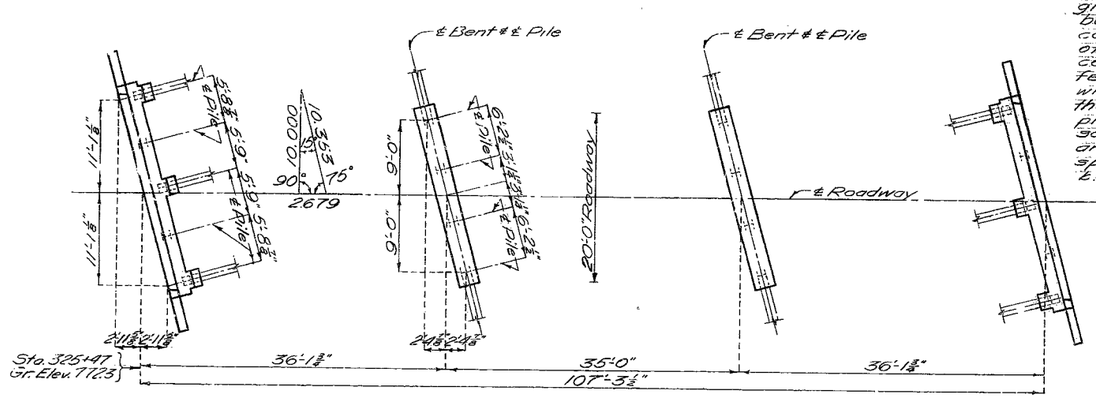
Note: Old roadway fill shall be removed to elevation 765.0 at Bent No. 4. Payment for this excavation outside the limits of excavation for substructure will be made at unit contract price for Roadway Excavation.

Note: All piling shall be 10" Bearing Piles @ 42 lbs. and shall conform with details and notes on sheet No. 2 of design plans. Estimated quantities shown on plans are based on the following lengths: 5 @ 35'-0" and 13 @ 45'-0". These indicated lengths are approximate only. Proper lengths to give required bearing and/or penetration will be authorized by the Engineer.

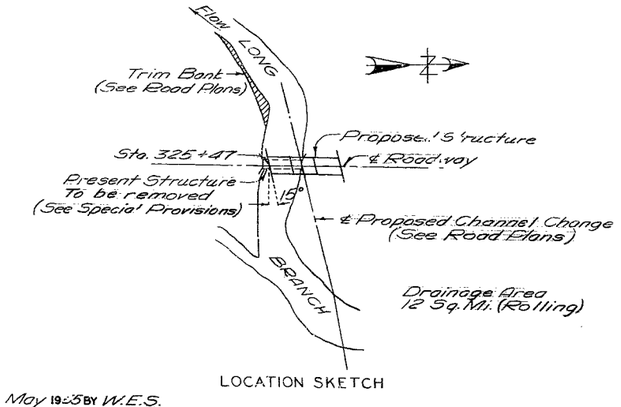
All piles shall be driven to or into solid rock, boulders, shale, or cemented gravel, or to not less than full length authorized and to sustain a load of at least 30 tons per pile.

A gravity hammer may be used for driving if desired.

Note: Steel Piles of End Bent No. 1 shall be coated with a heavy coating of an approved bituminous mastic paint from the bottom of the concrete cap to a point 3 feet below the existing ground line. Steel piles of End Bent No. 4 shall be so coated from the bottom of the concrete cap to a point 3 feet below the cap. Steel piles of Intermediate Bents No. 2 and 3 shall be so coated from a point 1 foot above to a point 3 feet below finished ground line. In no case will it be required to place the coating below the water line. Payment for excavating around piles below present ground line and backfilling same, furnishing bituminous mastic paint and cleaning and painting steel surfaces specified will be included in the unit price bid for other items.



PLAN



LOCATION SKETCH

GENERAL NOTES:

Design Specifications A.A.S.H.O. 1953
Loading H 10-44
Structural Steel Stress 18,000 #/a."
Reinforcing Steel Stress 18,000 #/a."
Class "B" Concrete Stress 1,000 #/a."
All concrete shall be Class "B."

Paint: Shop, none; Field, contact surfaces of bolted field connections one coat of red lead and surfaces inaccessible after erection three coats of red lead. No other paint to be applied by Contractor except as noted for steel piles. Red lead required shall be furnished by Contractor. Payment for cleaning and painting such surfaces will be included in unit price bid for Fabricated Structural Steel.

Where joint filler is specified on the plans it shall conform with the requirements of Section 38-19(1) h of the Standard Specifications for Premoulded Material for Filler.

For requirements on welding electrodes see Special Provisions. Qualification of welding operators will be required.

Rivets ⅞" ø, holes 15/16" ø except where otherwise noted.

Field connections shall be riveted except as noted in handrail details. If the Contractor desires to eliminate all field riveting on this project he may use machine bolts except for the ⅞" rivet head bolts specified for handrail. Heads and nuts of machine bolts shall be American Standard Regular.

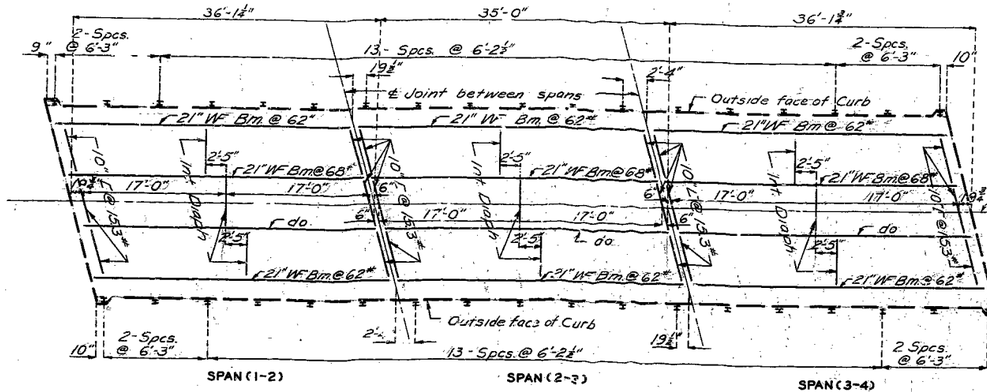
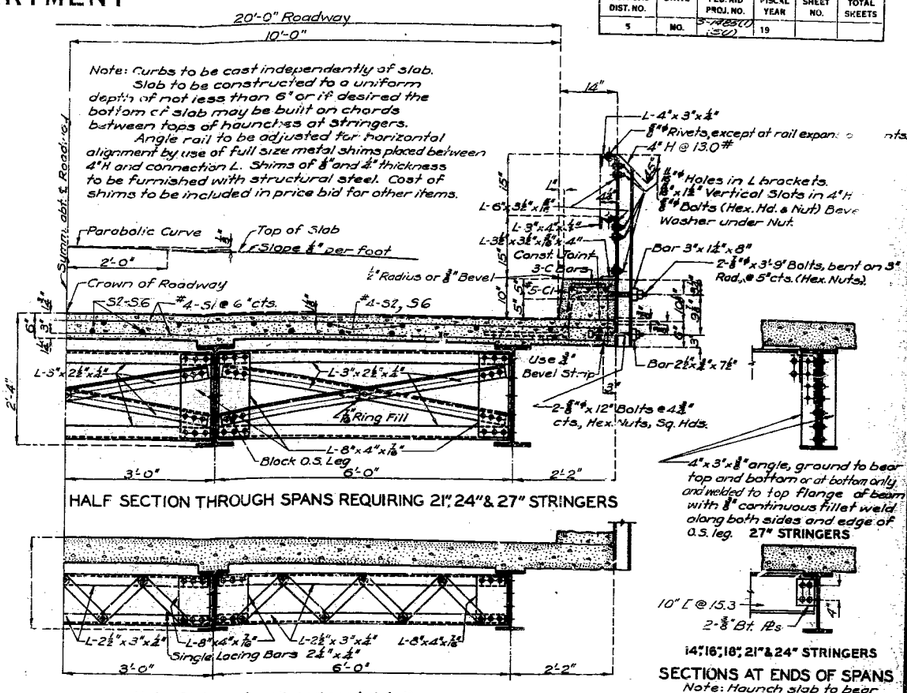
PLAN OF SLAB SHOWING REINFORCEMENT



PLAN OF STRUCTURAL STEEL



HALF SECTION THROUGH SPANS REQUIRING 21", 24" & 27" STRINGERS

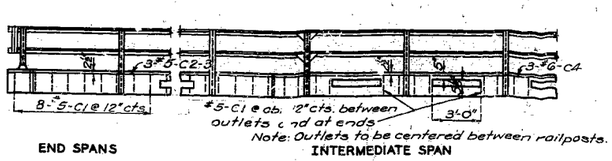
14", 16", 18", 21" & 24" STRINGERS

Note: Slab, curb, rail and post details same as shown in section for 24" stringers.

HALF SECTION THROUGH SPANS REQUIRING 14", 16" & 18" STRINGERS

SECTIONS AT ENDS OF SPANS

Note: Haunch slab to bear on [separators.

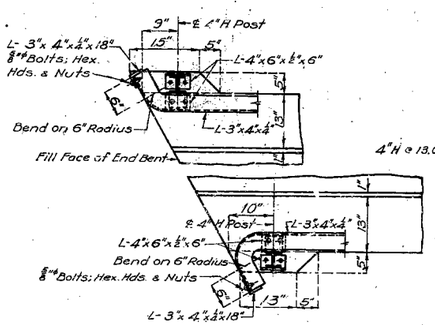


END SPANS — INTERMEDIATE SPAN

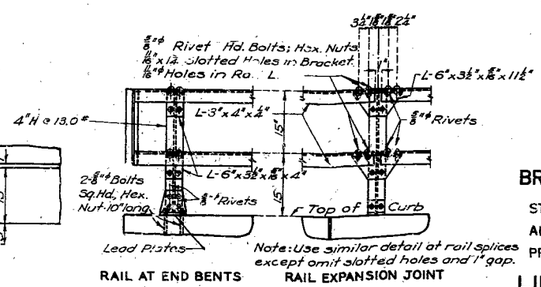
Note: Outlets to be centered between railposts.

TYPICAL CURB DETAILS

Note: Top of curbs under end posts shall be finished to a smooth surface parallel to grade. Not less than one nor more than four soft lead plates of ⅛" thickness shall be used under angles of each end rail post for aligning rail to correct elevation. Plates shall be 8½"x 6" and shall be punched ⅞" ø on same gauge as the angles. No grouting permitted. Cost of lead plates to be included in price bid for other items.



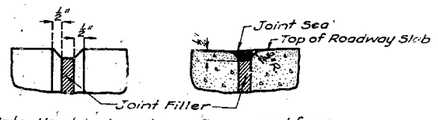
LOCATION OF POSTS AT END BENTS



RAIL AT END BENTS — RAIL EXPANSION JOINT

Note: Use similar detail at rail splices except omit slotted holes and 1" gap.

DETAILS OF RAIL



Note: Use bevel as shown for exposed faces of all filled joints except at top surface of roadway slab. Use edging tool with ⅜" radius at top surface of roadway slab each side of joint and fill flush with joint seal as shown.

DETAILS OF BEVEL FOR FILLED JOINTS

Note: Slab shall be built parallel to grade and to a minimum thickness of 6". Dead load deflection, vertical curve (if any), crown and any difference in depth of stringers shall be taken care of by haunching to stringers by the amounts shown above. This additional concrete is included in "Estimated Quantities."

GENERAL NOTES:

Finish all surfaces marked X.

Bearing castings shall be either gray iron alloy or cast steel, but payment will be made as Gray Iron Alloy.

All bolts and nuts shall be paid for as structural steel.

Anchor bolts for castings shall be 1"ϕ swedged bolts, no heads or nuts shall extend 10" into concrete. Top ends of anchor bolts shall be above the top of castings but not higher than ¼" below the top surface of the bottom flange of beam.

Lead plates under bearings shall be approximately ⅛" in thickness and weight 8#/sq. ft. Cost of lead plates shall be included in price bid for other items.

Fill plates may be made a part of top castings if desired, but payment for fill plates will be made as structural steel.

Edge Ⓐ to be rounded. (Radius ⅛" to ⅜")

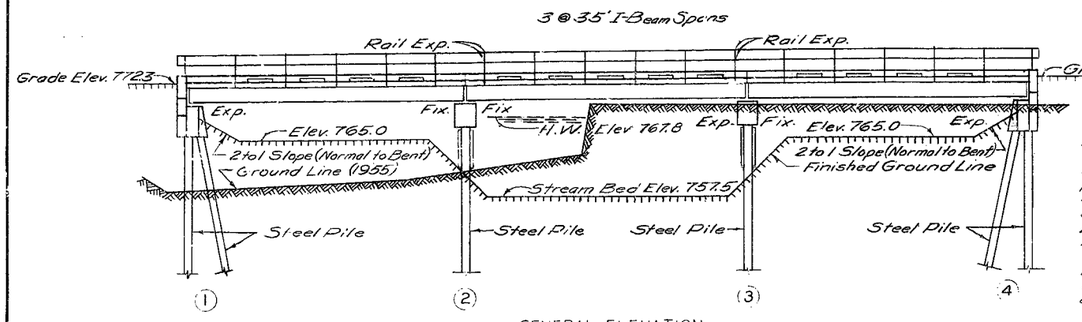
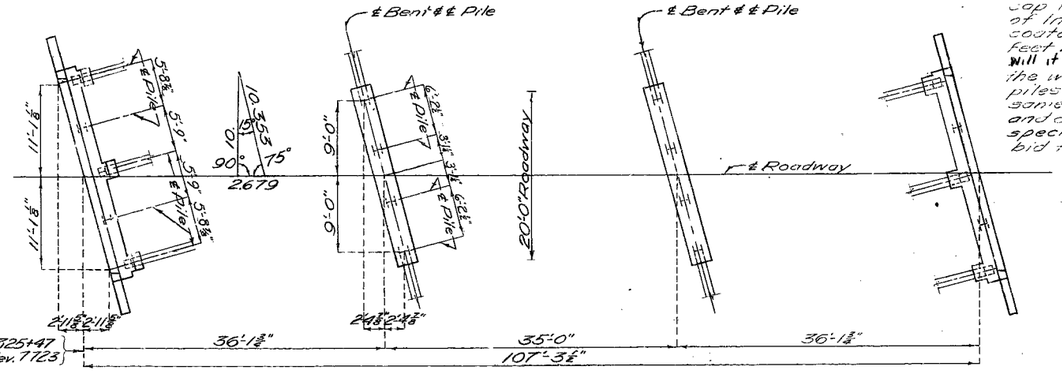
FINAL PLANS



GENERAL ELEVATION

Note: Old roadway fill was removed to elevation 765.0 of Bent No. 4. Payment for this excavation outside the limits of excavation for substructure was made at unit contract price for Roadway Excavation.



PLAN

Note: All piling were 10" Bearing Piles @ 42# and did conform with details and notes on sheet No. 2 of design plans. Estimated quantities shown on plans are based on the following lengths: 5 @ 35'-0" and 13 @ 45'-0". These indicated lengths are approximate only. Proper lengths to give required bearing and/or penetration will be authorized by the Engineer.

All piles were driven to or into solid rock, boulders, shale, or cemented gravel; or to not less than full length authorized and to sustain a load of at least 30 tons per pile.

A gravity hammer was used for driving, as required.

Note: Steel Piles of End Bent No. 1 were coated with a heavy coating of an approved bituminous mastic paint from the bottom of the concrete cap to a point 3 feet below the existing ground line. Steel piles of End Bent No. 4 were so coated from the bottom of the concrete cap to a point 3 feet below the cap. Steel piles of Intermediate Bents No. 2 and 3 were so coated from a point 1 foot above to a point 3 feet below finished ground line. In no case will it be required to place the coating below the water line. Payment for excavating around piles below present ground line and backfilling same, furnishing bituminous mastic paint and cleaning and painting steel surfaces specified was included in the unit price bid for other items.

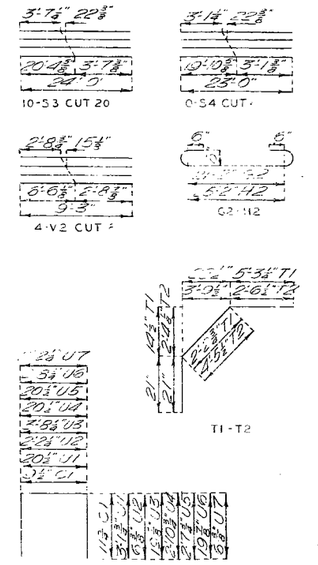
Cutting Diagrams & Bending Sketches



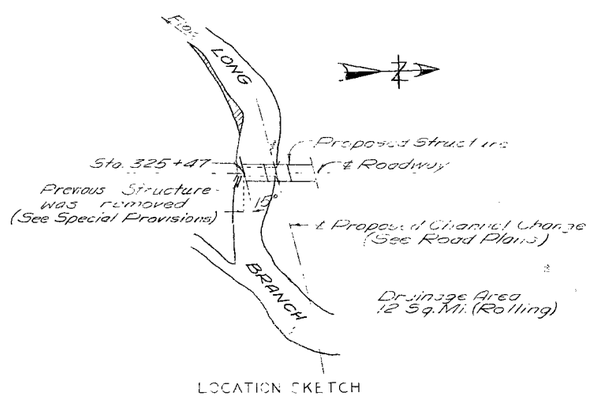
FINAL QUANTITIES

Item		Substr.	Superstr.	Total
Class I Excavation for Structures	Cu Yds.	32.0		32.0
Class "B" Concrete	Cu Yds.	40.0	51.4	91.4
Fabricated Structural Steel	Lbs.	1800	36940	38740
Gray Iron Alloy Castings	Lbs.		1280	1280
Reinforcing Steel	Lbs.	4610	10110	14720
Steel Piles in Place	Lin. Ft.	788		788
Steel Piles Cut-offs	Lin. Ft.	28		28

Note: All excavation for bridge was paid for as Class I Excavation for Structures.

Weight of Fabricated Structural Steel in substructure consists of weight of angles for Bents 2 & 3. Total pay weight for Fabricated Structural Steel was based on using field rivets except for bolted connections specified for handrail.

B.M. Elev. 765.5 Nail & Washer in South East Side 10" Willow ± 120' Lt. Sta. 325+14 (U.S.C.G.S. Datum)



LOCATION SKETCH

GENERAL NOTES:

Design Specifications A.A.S.H.O. 1953
Loading H10-44
Structural Steel Stress 18,000 #/sq."
Reinforcing Steel Stress 18,000 #/sq."
Class "B" Concrete Stress 1,000 #/sq."
All concrete was Class "B."

Paint on Shop, mine, and contact surfaces of bolted field connections one coat of red lead and surfaces inaccessible after erection three coats of red lead. No other paint was applied by Contractor, except as noted for steel piles. Red lead required was furnished by Contractor. Payment for cleaning and painting such surfaces was included in unit price bid for Fabricated Structural Steel.

Where joint filler is specified on the plans it did conform with the requirements of Section 38-19A(1)h of the Standard Specifications for Preformed Material for Filler.

For requirements on welding electrodes see Special Provisions. Qualification of welding operators will be required.

Rivets ⅞" ø, holes 15/16" ø except where otherwise noted.

Field connections were riveted except as noted in handrail details. The Contractor desired to eliminate all field riveting on this project, he used machine bolts except for the ⅞" rivet head bolts specified for handrail. Heads and nuts of machine bolts were American Standard Regular.

COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	4-MEETS MINIMUM TOLERABLE	3/19/2002
[Item 68] Deck Geometry Rating:	4-MEETS MINIMUM TOLERABLE	9/24/2020
[Item 69] Underclearance:	N-NOT APPLICABLE	5/18/2001
Sufficiency Rating:	50.0%	3/7/2024
Deficiency:	STRUCTURAL	9/24/2020
Funding Eligibility:		----
Estimated New Structure Length:		----
Estimated Structure Cost:		----
Estimated Total Project Cost:		----
Year of Cost Estimate:		----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

BRIDGE MEMORANDUM

Job No.: JNW0013 **Bridge No.:** X01531
County: Grundy **Route:** E (Low Volume) over Medicine Creek Drainage Ditch

Final Layout: U.I.P., Redeck & Make Composite Existing (55'-75'-75'-55') Continuous Wide Flange Beam Spans
Roadway Width: 24'-0" plus 16" Type D Barriers each side
Alignment: Tangent
Skew: Square
Profile Grade: Match existing ±
Loading: H-10 (1944), HS20-44 (New construction)
Begin Station: 294+53.00± (match existing)
Traffic Handling: Structure to be closed during construction. Traffic to be maintained on other routes during construction. See roadway plans for traffic control.
Traffic Information: AADT = 271 (2023), Truck = 26.3% = 71
AADT = 339 (2043), Truck = 26.3% = 89
Existing Bridge: Redeck X0153 and use in place.
Condition Ratings: Deck = 4, Superstructure = 7, Substructure = 7
Load Posting: No posting required (to be maintained)

General Notes:

- Remove existing bridge deck including curbs, rails and top of wings.
- Install 6½" CIP sliding slab with 3/16" cross slope (without precast panels), stay-in-place forms permitted.
- Increase existing haunch ½" to match existing profile grade.
- Make End Bents No. 1 & 5 semi-integral.
- Install 16" wide, Type D Barriers.
- Install Slab Drains as required.
- Install Shear Connectors to make composite.
- Apply Gray Epoxy-Mastic Primer on sides & bottom of top flange for whole length of bridge.
- Clean & Recoat existing bearings at Int. Bents No. 2 & 3.
- Install 20' Bridge Approach Slab (Minor) at End Bents No. 1 & 5.
- No conduit, lighting, utility supports, or sidewalks are to be included in the final plans.
- Existing paint system is System B (lead based).
- Bridge deck may be finished with a vibratory screed. Include note B3.25 on plans.

Special Notes:

- Provide object markers at each corner of bridge (Roadway Item).
- Remove existing Bridge Approach Pavement (Roadway Item).
- Roadway surfacing adjacent to bridge ends to match top of bridge deck (Roadway Item).
- Rubblized existing bridge deck may be used on spill slopes (Roadway Item).
- An asbestos and lead inspection has been performed on this structure (X0153). Results indicate that asbestos is not present and lead is present. The Bridge Division will include this report in the electronic deliverables folder when submitting contract documents to the Design Division for the letting (Bridge Item).
- Girders to be recoated in a future, paint-only contract (Estimated cost of $96,000).

Estimated Working / Calendar Days = **30** / **45**
FY26 Estimated Construction Cost[1] = $407,000

[1]Does not include STIP inflation from Planning

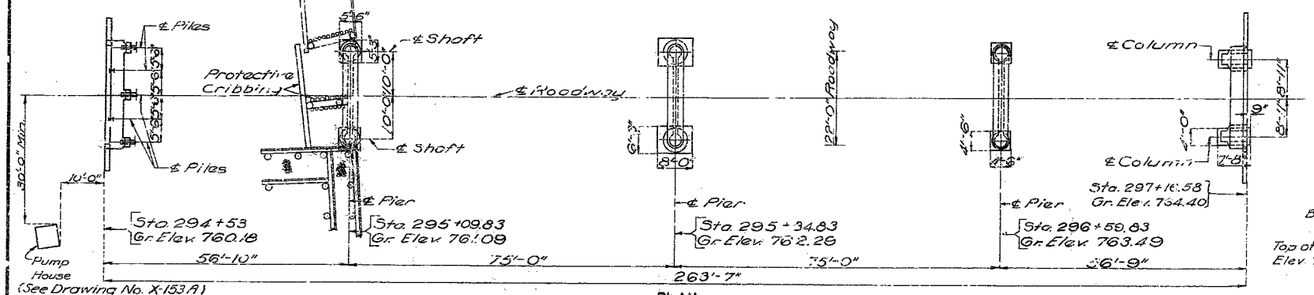
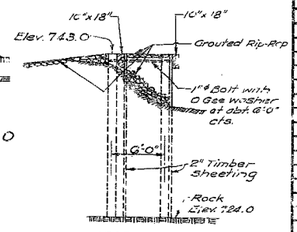
GENERAL ELEVATION

Note:
All steel piling shall be 10" x 10" WF Beams @ 42# and shall conform with details and notes on Sheet No. 2 of design plans. Estimated quantities shown on plans are based on 42'-0" lengths. This indicated length is approximate only. Proper lengths to give required bearing and/or penetration will be authorized by the Engineer. See Special Provisions.

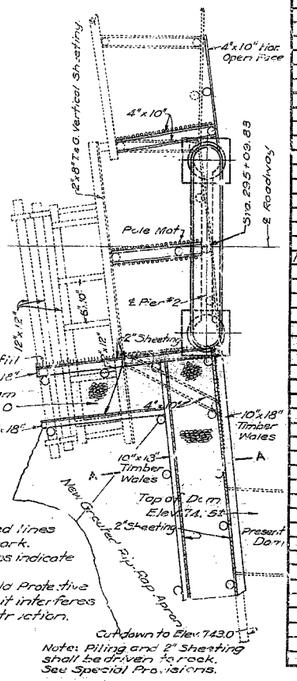
All piles shall be driven to practical refusal on or into solid rock, boulders, shale or cemented gravel or to not less than the full length authorized and to sustain a load of at least 40 ton per pile. A gravity hammer weighing at least 3000# may be used if desired.





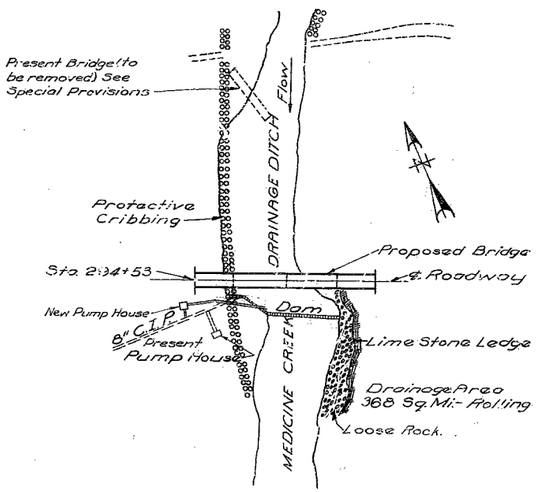
SECTION A-A

Note: All loose, shelly or disintegrated rock shall be removed and the footings of Piers No. 2, 3 & 4 and Bent No. 5 placed on hard, solid undisturbed rock. If soft rock or shale is encountered the footings shall be carried at least 18" into and cast against vertical faces of same.



Note: Light dotted lines indicate old work. Heavy lines indicate new work. Remove old Protective Cribbing where it interferes with new construction.

Note: Piling and 2" Sheeting shall be driven to rock. See Special Provisions.



LOCATION SKETCH

GENERAL NOTES:

Design Specifications A.A.S.H.O. 1944
Loading H-10 A.A.S.H.O.
Structural Steel Stress 18,000 #/sq".
Reinforcing Steel Stress 18,000 #/sq".
Concrete Class "B" 1,000 #/sq".
All concrete shall be Class "B"
Rivets ⅞", except as noted.
Paint: Shop, none; Field, contact surfaces of bolted field connections one coat of red lead and surfaces inaccessible after erection three coats of red lead. No other paint to be applied by the Contractor. Payment for cleaning and painting such surfaces will be included in unit price bid for Fabricated Structural Steel.

Where joint filler is specified on plans it shall conform with the requirements of Section 30-19A(1) of the Standard Specifications for Premoulded Material Filler.

Qualification of all welding operators and electrodes will be required in accordance with specifications, except that a proper certification of electrodes previously qualified will be acceptable.

Surfaces of piles on end bent from bottom of concrete caps to 3'-0" below present ground line shall be painted with one coat of an approved brand of emulsified asphalt paint. Payment for excavating around piles below present ground line and backfilling same, furnishing emulsified asphalt paint and cleaning and painting steel surfaces specified will be included in the unit price bid for other items.

ESTIMATED QUANTITIES

Item		Substructure	Superstructure	Total
Class 1 Excavation for Structures	Cu. Yds.	133		133
Class 2 Excavation for Structures	Cu. Yds.	218		218
Class "B" Concrete	Cu. Yds.	139.7	141.0	314.7
Reinforcing Steel	Lbs.	15,660	23,780	39,440
Steel Castings	Lbs.	6,460		6,460
Steel Piles In Place	Lin. Ft.	192		192
Steel Pile Cut-offs	Lin. Ft.	15		15
Fabricated Structural Steel	Lbs.	400	57,200	57,600
Creosoted Timber	F.B.M.			3,420
Creosoted Timber Piles In Place	Lin. Ft.			309
Creosoted Timber Pile Cut-offs	Lin. Ft.			45
Grouted Rip Rap (Bank and Apron)	Cu. Yds.			60

Note: Excavation for bridge made above Elev. 743.5 will be paid for as Class 1 Excavation for Structures.

Excavation for bridge made below Elev. 743.5 will be paid for as Class 2 Excavation for Structures.

Excavation of all existing materials under bridge shall be made to not less than 3'-0" below bottom of steel and not less than 4'-0" outside of curb lines. Payment for this excavation outside limits of excavation for structure will be made at unit contract price for Roadway Excavation.

See Special Provisions for removing and replacing protective cribbing as required for construction of Pier No. 2 and as required for extension of present dam.

GENERAL NOTES:

Design Specifications A.A.S.H.O. 1944
Loading H-10 A.A.S.H.O.
Structural Steel Stress 18,000 #/□".
Reinforcing Steel Stress 16,000 #/□".
Concrete Class 'B' 1,000 #/□".
All concrete shall be Class 'B'.
Rivets ⅞" ø except as noted.
Paint: Shop, none; Field, contact surfaces of bolted field connections one coat of red lead and surfaces inaccessible after erection three coats of red lead. No other paint to be applied by the Contractor. Payment for cleaning and painting such surfaces will be included in unit price bid for Fabricated Structural Steel.
Where joint filler is specified on plans it shall conform with the requirements of Section 38-19A(1) of the Standard Specifications for Premoulded Material Filler.
Qualification of all welding operators and electrodes will be required in accordance with specifications, except that a proper certification of electrodes previously qualified will be acceptable.
Surfaces of piles on end bent from bottom of concrete caps to 3'-0" below present ground line shall be painted with one coat of an approved brand of emulsified asphalt paint. Payment for excavating around piles below present ground line and backfilling same, furnishing emulsified asphalt paint and cleaning and painting steel surfaces as specified will be included in the unit price bid for other items.

FINAL QUANTITIES

Item	Substr.	Total
Moving Crane Track to drive steel piles Bent 4 - Force Account		$ 76.65
Repairing floor of low-water bridge with by-pass Force Account		$ 65.90
Drilling footing test holes Bents 2 & 3 Lin. Ft.	66	66
Deduction Vertical for bevel haunches		$ 104.30

FINAL QUANTITIES

Item		Substr.	Superstr.	Total
Class 1 Excavation for Structures	Cu. Yds.	127.5		127.5

REINFORCING IN SUMP SLAB

Note: See Special Provisions for final location of pump well.

GENERAL NOTES:

All concrete shall be Class "B".

See Special Provisions for requirements for lumber, damp proofing, painting, and excavation.

Pour footings integral with walls. No construction joints permitted.

Openings shall be provided in concrete roof for electrical conduits as directed by the Railroad Company's Engineer.

Final location of pipe sleeves and anchor bolts for centrifugal pump will be furnished by Railroad Company's Engineer before pouring concrete. Cost of pipe sleeves, anchor bolts, and ladder rungs shall be included in price bid for other items.

Missouri Department of Transportation
State Bridge Inspection Report

COUNTY: GRUNDY **DISTRICT: NW** **CLASS: STATBR** **FED-ID: 9559** **BRIDGE: X0153**

CLEARANCES UNDER BRIDGE

**NOTE: Vertical clearances for permitting purposes are taken as 2 inches less than the actual field measured clearance.

COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	5-BETTER THAN MINIMUM	12/27/2011
[Item 68] Deck Geometry Rating:	4-MEETS MINIMUM TOLERABLE	12/31/2002
[Item 69] Underclearance:	N-NOT APPLICABLE	5/18/2001
Sufficiency Rating:	55.4%	3/7/2024
Deficiency:	STRUCTURAL	1/4/2016
Funding Eligibility:		----
Estimated New Structure Length:		----
Estimated Structure Cost:		----
Estimated Total Project Cost:		----
Year of Cost Estimate:		----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.
