GENERAL COMMENTS/MAJOR RATED ITEMS

GENERAL COMMENTS: (MADSEJ, 11/15/2019)--10 @ (181') THRU TRUSS SMP SPANS

[ITEM 58] DECK: 4-POOR CONDITION
RATING : 10/21/2021
COMMENTS: (MADSEJ, 12/15/2017)--MINOR TO MODERATE DECK EDGE DETERIORATION AT THE CURB OUTLETS.
(LISTED1, 10/21/2021)--RATING CHANGE DUE TO MANY MAPS CRACKS THROUGHOUT SPANS 4-10 W/ HEAVY DECK EDGE AND CURB OUTLET DETERIORATION

[ITEM 59] SUPER: 4-POOR CONDITION
RATING : 12/15/2017
COMMENTS: (MADSEJ, 11/15/2019)--MODERATE TO ADVANCED SECTION LOSS AT THE BOTTOM OF THE WEB, BOTTOM FLANGE, AND TOP FLANGE THROUGHOUT MOST OF THE END FLOORBEAMS.

[ITEM 60] SUB: 6-SATISFACTORY CONDITION
RATING : 05/18/2001
COMMENTS: (STEGEC, 08/06/2018)--MINOR TO MODERATE CRACKING AND SPALLING THROUGHOUT A FEW OF THE PIER BEAMCAPS. TOP OF FOOTING EXPOSED (2 FT.) ON ROCK AT PIER 5 PER DIVETEAM 2018

[ITEM 61] BANK/CHANNEL: 8-PROTECTED DEVICES STBLE
RATING : 05/18/2001
COMMENTS: (STEGEC, 08/06/2018)--THE STRUCTURE IS OVER BULL SHOALS LAKE. WEST ABUTMENT FILL SLOPES ARE WELL PROTECTED WITH ROCK AND EAST ABUTMENT SETS ON ROCK BLUFF AND BOTH ARE IN GOOD CONDITION.

[ITEM 113] SCOUR: 8-STABLE FOR CALCULATED
RATING : 05/18/2001
EVALUATION TYPE :
COMMENTS: (ELSEMJ, 08/11/2022)--NO SCOUR OBSERVED

[ITEM 71] WATERWAY ADEQUACY: DECK ABOVE FLOOD ELEV
RATING : 05/18/2001
COMMENTS:

[ITEM 72] APPRRDWY ALIGNMENT: 6-SATISFACTORY
RATING : 05/18/2001
COMMENTS: (HULBES1, 11/01/2023)--MINOR SPEED REDUCTION REQUIRED ON EAST END

COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	4-MEETS MINIMUM TOLERABLE	1/16/2018
[Item 68] Deck Geometry Rating:	2-BASICALLY INTOLRBLE REQ	3/6/2024
[Item 69] Underclearance:	N-NOT APPLICABLE	5/18/2001
Sufficiency Rating:	17.9%	10/25/2021
Deficiency:	STRUCTURAL	1/16/2018
Funding Eligibility:	FULL	----
Estimated New Structure Length:	49 FT.	----
Estimated Structure Cost:	$17,570,970	----
Estimated Total Project Cost:	$26,356,455	----
Year of Cost Estimate:	2024	----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

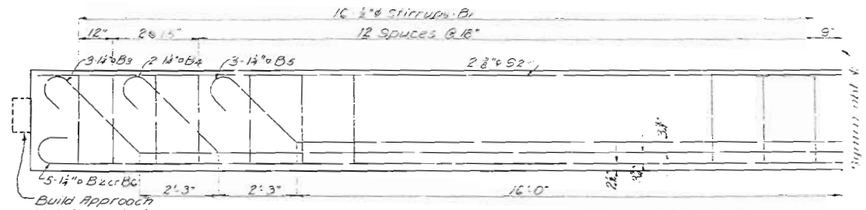
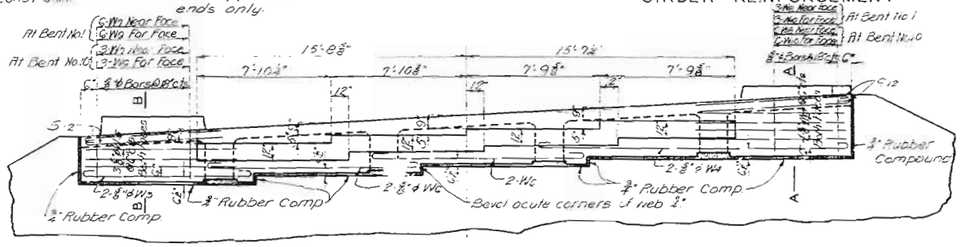
Note: Space between bottom of girders and the top of intermediate bents to be left open to depth of plates.



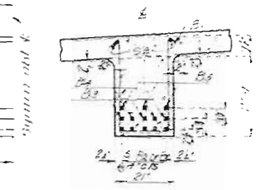
GIRDER REINFORCEMENT



ELEVATION AT END BENT NO. 1

Elevation at End Bent No 10 is similar.

Note: Space between the top of end bents and bottom of end webs of girders shall be filled with rubber compound except space in front of bearing plates which may be left open to depth of plates.



SECTIONS A-A & B-B THRU END WEB

Note Use bevel as shown for exposed faces of all joints consisting of rubber compound except at top surface of roadway slab. Use ¾" radius edging tool at top surface of roadway slab, each side of rubber compound joint and fill flush with joint filler as shown.

GENERAL NOTES:

Design Specifications:

2002 AASHTO LFD (17th Ed.) Standard Specifications
Bridge Deck Rating = 6

Design Unit Stresses:

Structural Low Alloy Steel (ASTM A709 Grade 50) fy = 50,000 psi

Concrete Protective Coatings:

Protective coating for concrete bents and piers (Epoxy) shall be applied as shown on the bridge plans and in accordance with Sec 711.

Miscellaneous:

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

High strength bolts, nuts and washers will be sampled for quality assurance as specified in Sec 106.

Fabricated structural steel shall be ASTM A709 Grade 50, except as noted.

Field connections shall be made with ¾″ diameter high strength bolts and $\frac{13}{16}$″ diameter holes, except as noted.

Shop-drilled holes in new steel and existing holes in existing steel may be used as a template for field drilling new holes at connection joints with the installation of replacement end portals and sway frames.

Removal and replacement of the end portals and sway frames, as shown in the plans, and any incidental work, complete in place, will be considered completely covered by the contract lump sum price for "Remove and Replace Portals and Sway Frames".

All removed rivets in rehab structure shall be replaced with high strength bolts with flat washer under bolt head and nut (See Special Provisions).

Roadway surfacing adjacent to the bridge ends shall match new bridge wearing surface (Roadway Item).

Traffic Handling:

Traffic to be maintained on structure during construction except structure to be closed during heat straightening and removal and replacement of portals and sway frames. See roadway plans for traffic control.

Estimated Quantities

Item		Total
Removal of Seal Coat	sq. foot	39,981
Ultrathin Bonded Wearing Surface, Type C	sq. yard	4,442
Substructure Repair (Unformed)	sq. foot	70
Repairing Concrete Deck (Half-Soling)	sq. foot	6,000
Full Depth Repair	sq. foot	400
Clean and Epoxy Seal	sq. foot	8,954
Protective Coating-Concrete Bents and Piers (Epoxy)	lump sum	1
Surface Preparation for Recoating Structural Steel	lump sum	1
Field Application of Inorganic Zinc Primer	lump sum	1
Intermediate Field Coat (System G)	lump sum	1
Finish Field Coat (System G)	lump sum	1
Remove and Replace Portals and Sway Frames	lump sum	1
Heat Straightening	lump sum	1

The State estimates there is approximately 98,000 pounds of new steel in the pay item "Remove and Replace Portals and Sway Frames" and that weight is used in preparing the cost estimate for the pay item. Variation may be encountered in the estimated weight but the variation cannot be used for an adjustment in the contract lump sum price.

Structural Steel Protective Coatings:

Protective Coating: System G in accordance with Sec 1081.

Coating Limits: All existing structural steel of the truss bridge, including curb rails.

Surface Preparation: Surface preparation of the existing steel shall be in accordance with Sec 1081 for "Recoating of Structural Steel (System G, H or I)". The cost of surface preparation will be considered completely covered by the contract lump sum price for "Surface Preparation for Recoating Structural Steel".

Prime Coat (Exist. Steel): The cost of the prime coat for existing steel will be considered completely covered by the contract lump sum price for "Field Application of Inorganic Zinc Primer". Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

Prime Coat (New Steel): The cost of the prime coat for new steel will be considered completely covered by the contract lump sum price for "Remove and Replace Portals and Sway Frames". Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

At the option of the contractor, the intermediate field coat and finish field coat may be applied in the shop. The contractor shall exercise extreme care during all phases of loading, hauling, handling and erection to minimize damage and shall be fully responsible for all repairs and cleaning of the coating systems as required by the engineer.

Field Coats: The color of the field coats shall be Brown (Federal Standard #30045). The cost of the intermediate field coat will be considered completely covered by the contract lump sum price for "Intermediate Field Coat (System G)". The cost of the finish field coat will be considered completely covered by the contract lump sum price for "Finish Field Coat (System G)".

The surfaces of existing steel that will become faying surfaces for new connections of replacement end portals and sway frames shall be cleaned according to the manufacturer's recommendation and with a minimum of SSPC-SP-3 surface preparation and coated with one prime coat of Gray Epoxy-Mastic Primer (non-aluminum) in accordance with Sec 1081.

For the duration of cleaning and recoating the truss spans, the truss span superstructure in any span shall not be draped with an impermeable surface subject to wind loads for a length any longer than 1/4 the span length at any one time regardless of height of coverage. Simultaneous work in adjacent spans is permissible using the specified limits in each span.

HALF SECTION NEAR MID-PANEL POINT

TYPICAL SECTION THRU EXISTING DECK

GENERAL NOTES:

Design Specifications:

2002 AASHTO LFD (17th Ed.) Standard Specifications
Bridge Deck Rating = 6

Design Unit Stresses:

Structural Low Alloy Steel (ASTM A709 Grade 50) fy = 50,000 psi

Concrete Protective Coatings:

Protective coating for concrete bents and piers (Epoxy) shall be applied as shown on the bridge plans and in accordance with Sec 711.

Miscellaneous:

Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Contractor shall verify all dimensions in field before ordering new material.

High strength bolts, nuts and washers will be sampled for quality assurance as specified in Sec 106.

Fabricated structural steel shall be ASTM A709 Grade 50, except as noted.

Field connections shall be made with ¾″ diameter high strength bolts and $\frac{13}{16}$″ diameter holes, except as noted.

Shop-drilled holes in new steel and existing holes in existing steel may be used as a template for field drilling new holes at connection joints with the installation of replacement end portals and sway frames.

Removal and replacement of the end portals and sway frames, as shown in the plans, and any incidental work, complete in place, will be considered completely covered by the contract lump sum price for "Remove and Replace Portals and Sway Frames".

All removed rivets in rehab structure shall be replaced with high strength bolts with flat washer under bolt head and nut (See Special Provisions).

Roadway surfacing adjacent to the bridge ends shall match new bridge wearing surface (Roadway Item).

Traffic Handling:

Traffic to be maintained on structure during construction except structure to be closed during heat straightening and removal and replacement of portals and sway frames. See roadway plans for traffic control.

Final ~~Estimated~~ Quantities

Item		Total
Removal of Seal Coat	sq. foot	39,981
Ultrathin Bonded Wearing Surface, Type C	sq. yard	4,686
Substructure Repair (Unformed)	sq. foot	23
Repairing Concrete Deck (Half-Soling)	sq. foot	10,083
Full Depth Repair	sq. foot	29
Clean and Epoxy Seal	sq. foot	8,954
Protective Coating-Concrete Bents and Piers (Epoxy)	lump sum	1
Surface Preparation for Recoating Structural Steel	lump sum	1
Field Application of Inorganic Zinc Primer	lump sum	1
Intermediate Field Coat (System G)	lump sum	1
Finish Field Coat (System G)	lump sum	1
Remove and Replace Portals and Sway Frames	lump sum	1
Heat Straightening	lump sum	1
Misc. Structural Steel Construction	lump sum	1

The State estimates there is approximately 98,000 pounds of new steel in the pay item "Remove and Replace Portals and Sway Frames" and that weight is used in preparing the cost estimate for the pay item. Variation may be encountered in the estimated weight but the variation cannot be used for an adjustment in the contract lump sum price.

Structural Steel Protective Coatings:

Protective Coating: System G in accordance with Sec 1081.

Coating Limits: All existing structural steel of the truss bridge, including curb rails.

Surface Preparation: Surface preparation of the existing steel shall be in accordance with Sec 1081 for "Recoating of Structural Steel (System G, H or I)". The cost of surface preparation will be considered completely covered by the contract lump sum price for "Surface Preparation for Recoating Structural Steel".

Prime Coat (Exist. Steel): The cost of the prime coat for existing steel will be considered completely covered by the contract lump sum price for "Field Application of Inorganic Zinc Primer". Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

Prime Coat (New Steel): The cost of the prime coat for new steel will be considered completely covered by the contract lump sum price for "Remove and Replace Portals and Sway Frames". Tint of the prime coat for System G shall be similar to the color of the field coat to be used.

At the option of the contractor, the intermediate field coat and finish field coat may be applied in the shop. The contractor shall exercise extreme care during all phases of loading, hauling, handling and erection to minimize damage and shall be fully responsible for all repairs and cleaning of the coating systems as required by the engineer.

Field Coats: The color of the field coats shall be Brown (Federal Standard #30045). The cost of the intermediate field coat will be considered completely covered by the contract lump sum price for "Intermediate Field Coat (System G)". The cost of the finish field coat will be considered completely covered by the contract lump sum price for "Finish Field Coat (System G)".

The surfaces of existing steel that will become faying surfaces for new connections of replacement end portals and sway frames shall be cleaned according to the manufacturer's recommendation and with a minimum of SSPC-SP-3 surface preparation and coated with one prime coat of Gray Epoxy-Mastic Primer (non-aluminum) in accordance with Sec 1081.

For the duration of cleaning and recoating the truss spans, the truss span superstructure in any span shall not be draped with an impermeable surface subject to wind loads for a length any longer than 1/4 the span length at any one time regardless of height of coverage. Simultaneous work in adjacent spans is permissible using the specified limits in each span.
