

Concrete Testing Cleanup Tank

Description and Benefit

This Concrete Cleanup Tank provides a way to clean up testing equipment when you don't have access to the concrete truck or other sources of water. It's a 25-gallon spot spray tank with an electric pump that has been repurposed to provide cleanup water for concrete testing equipment. The tank is mounted in a metal frame for protection and portability and includes a 25-foot retractable hose reel for convenience. Power is provided by plugging the power cord into the vehicles trailer plug and turning on the lights.
