COMPUTER GENERATED RATINGS AND DEFICIENCY ITEMS

NOTE: The items listed in this section are updated whenever computer edits are ran on a structure after the inspection updates have been entered in to TMS.

Rated Item	Rating	Rating Date
[Item 67] Structure Evaluation Rating:	6-EQ TO PRESENT MIN CRITR	1/4/2017
[Item 68] Deck Geometry Rating:	9-SUPR TO PRES DESIRABLE	3/26/2002
[Item 69] Underclearance:	4-MEETS MINIMUM TOLERABLE	1/4/2022
Sufficiency Rating:	84.4%	7/16/2025
Deficiency:	NOT DEFICIENT	7/16/2025
Funding Eligibility:		----
Estimated New Structure Length:		----
Estimated Structure Cost:		----
Estimated Total Project Cost:		----
Year of Cost Estimate:		----

NOTE: The above structure length and cost estimates are computer generated using algorithims in the TMS system. These algorthims are generalized to use NBI items to come up with a new structure length and width to calculate a new area which is taken times a representative cost per square foot. The actual structure size and cost may vary significantly from these numbers once site specific engineering is done.

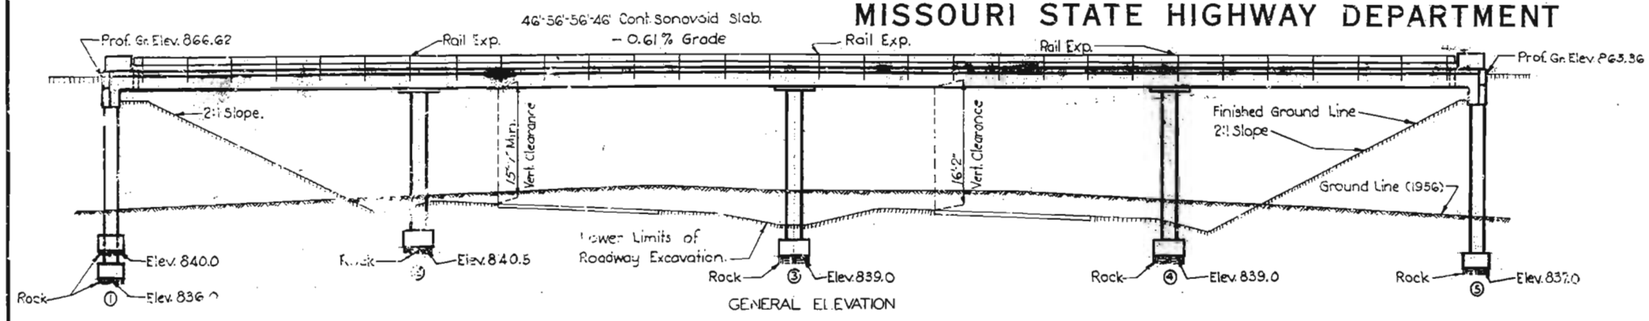
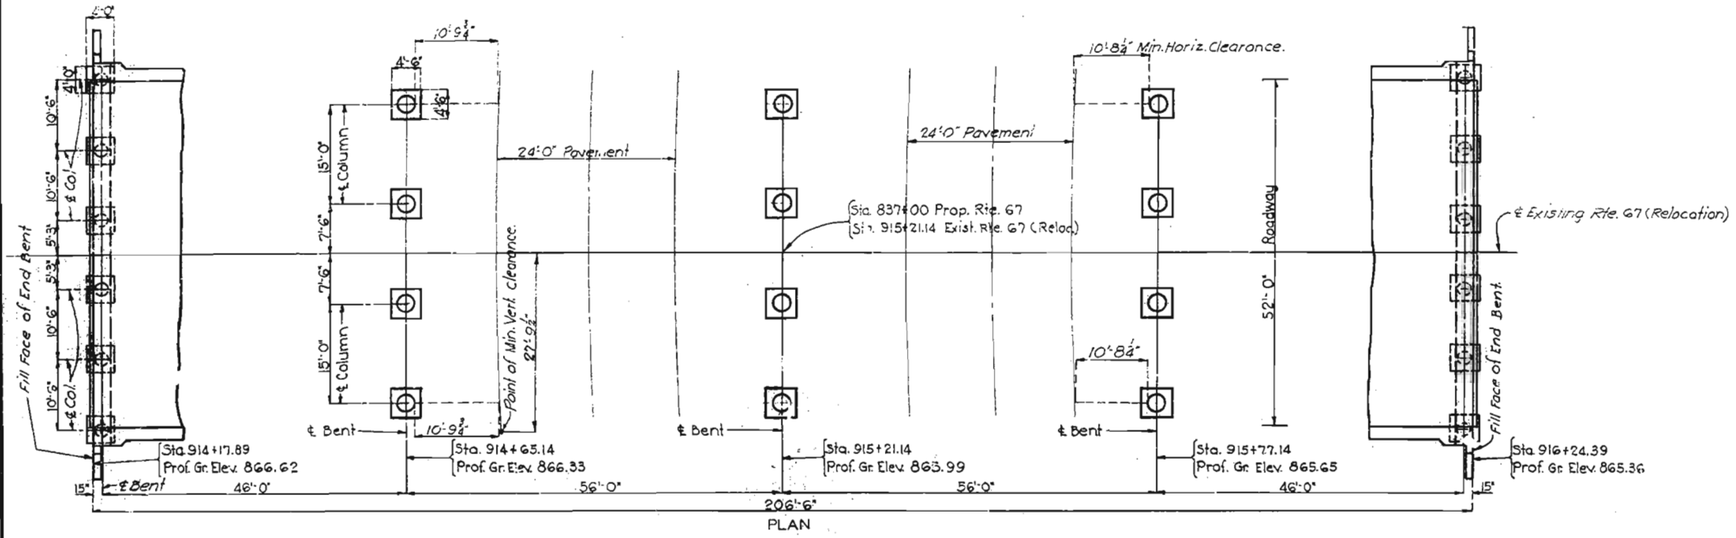
5	MO.		19		



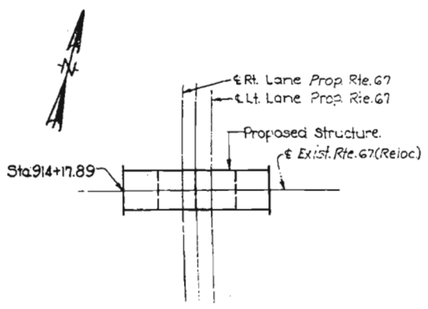
GENERAL ELEVATION

Note: All loose, shelly or disintegrated rock shall be removed and the footings placed on hard, solid, undisturbed rock. If soft rock or shale is encountered, the footings shall be carried at least 18" into and cast against vertical faces of same. In no case shall footings for Bents No. 2, 3 and 4 be placed higher than Elevations shown on plans.



PLAN

384



LOCATION SKETCH

GENERAL NOTES:

Design Specifications: A.A.S.H.O. 1953.
Loading H20-S16-44 (Future wearing surface 15"/"').
Reinforcing Steel Stress: 20,000 #/□"
Concrete Stress: 1400 #/□"

Concrete for superstructure shall be Class "B-1" air entrained. (See Special Provisions.)

Concrete for substructure shall be Class "B" air entrained. If the Contractor desires, he may use Class "B-1" in lieu of Class "B" for concrete in substructure with payment on the basis of Class "B" concrete.

Where Joint filler is specified on the plans it shall conform with the requirements for Gray Rubber Compound Joints as given in Section 59-22 B of the Standard Specifications.

A rubbed surface finish will be required on all exposed surfaces of concrete end posts above top of curbs.

Paint: Shop, none. Field, contact surfaces of bolted field connections (steel to steel) one coat of red lead and surfaces of rail posts in contact with concrete three coats of red lead. No other paint to be applied by Contractor. Red lead required shall be furnished by Contractor. Payment for cleaning and painting such surfaces will be included in unit price bid for Fabricated Structural Steel.

False work shall remain in place until the entire superstructure slab has been poured and attained the design strength as specified in the Standard Specifications.

Before any falsework is removed the middle half of slab in each span shall be relieved of any support from falsework. Removal of falsework may then proceed in any span starting near middle of span and proceeding toward the substructure units.

ESTIMATED QUANTITIES

ITEM		SUBSTR.	SUPERSTR.	TOTAL
Class 1 Excavation for Structures.	Cu. Yds.	300		300
Class "B" Concrete.	Cu. Yds.	40.3		40.3
Class "B-1" Concrete.	Cu. Yds.		808.5	808.5
Reinforcing Steel.	Lbs.	4560	197000	201,560
Fabricated Structural Steel.	Lbs.		13,950	13,950

Note: All excavation for bridge shall be paid for as Class 1 Excavation for Structures. Estimated quantities of Class 1 Excavation for structures includes only amount of excavation below limits of Roadway Excavation. (See Special Provisions.)

All concrete and reinforcing steel above footings is included in Superstructure quantities.

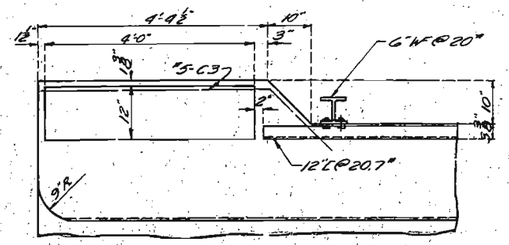
FIXED POST — EXP. POST

TYPICAL RAIL ELEVATIONS

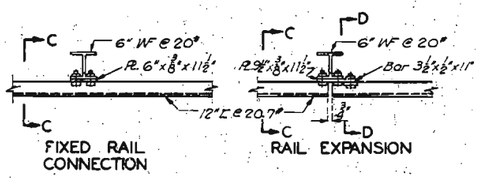
FIXED POST — SPLICE POST

Note: Outlets to be centered between railpost. For location of outlets if any, see Sheet No.) of design plans. C2 bars in curb to be spaced at abt. 12" cts. from end post to end post on bridges having no outlets.



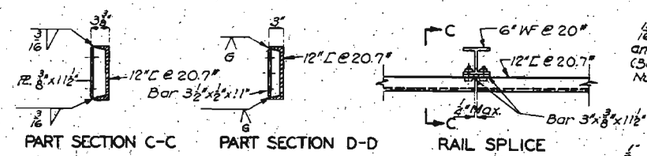
PLAN OF END POST

Note: Omit 9" radius curve on curb at ends of bridge where drain basin is provided on approach pavement



FIXED RAIL CONNECTION

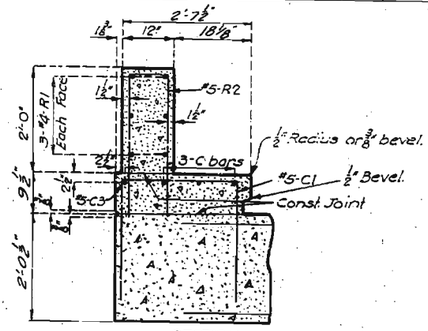
RAIL EXPANSION



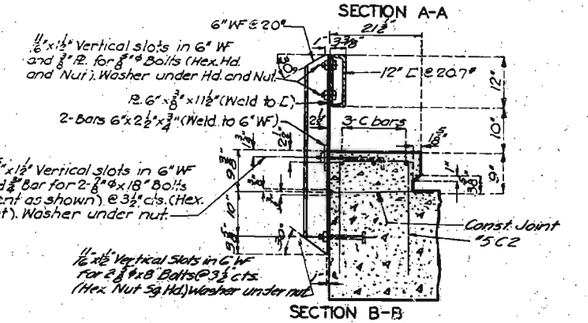
PART SECTION C-C

PART SECTION D-D

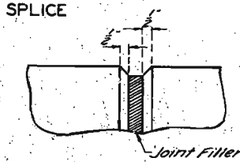
RAIL SPLICE



SECTION A-A



SECTION B-B



Note: Use bevel as shown for exposed faces of all filled Joints

DETAIL OF BEVEL FOR ALL FILLED JOINTS

Note: Channel rail to be adjusted for horizontal alignment by use of full size metal shims placed between 6" WF and connection Rd. Shims of 1/8" & 3/16" thickness to be furnished with structural steel. Cost of shims to be included in price bid for other items.

GENERAL NOTES:

Top of curbs and end posts to be built parallel to grade. Vertical faces of end posts to be vertical
All exposed edges of end posts to be beveled 1/2"
6" WF posts to be set normal to grade
12" L Rails shall be fabricated to conform to horizontal and vertical alignment to curb

390

GENERAL NOTES:

Design Specifications: A.A.S.H.O. 1953.

Loading H20-S16-44 (Future wearing surface ...)

Reinforcing Steel Stress: 20,000 #/□"

Concrete Stress: 1400 #/□"

Concrete for superstructure **was** Class "B-1" air entrained. (See Special Provisions.)

Concrete for substructure shall be Class "B" air entrained. If the Contractor desires, he may use Class "B-1" in lieu of Class "B" for concrete in substructure with payment on the basis of Class "B" concrete.

Where Joint filler is specified on the plans it shall conform with the requirements for ... Rubber Compound Joints as given in Section 59-22 B of the Standard Specifications.

A rubbed surface finish **was given to** all exposed surfaces of concrete end posts above top of curbs.

Paint: Sh... none. Field, contact surfaces of bolted field connections (Steel to Steel) one coat of red lead and surfaces of rail posts in contact with concrete three coats of red lead. No other pain **was used** by Contractor. Red lead required shall be furnished by Contractor. Payment for cleaning and painting such surfaces will be included in unit price bid for Fabricated Structural Steel.

Falsework **was left** in place until the entire superstructure slab **was** poured and attained ... strength as specified in the Standard Specifications.

Before any falsework **was** removed, the middle half of slab in each span **was** relieved of any support from falsework. Removal of falsework ... then proceeded in **each** span starting near middle of span and proceed**ed** toward the substructure units.

FINAL QUANTITIES

ITEM		SUBSTR	SUPERSTR	TOTAL
Class 1 Excavation for Structures	Cu. Yds.	2605		2605
Class B Concrete	Cu. Yds.	40.4		40.4
Class "B-1" Concrete	Cu. Yds.		808.3	808.3
Reinforcing Steel	Lbs.	4,560	197,000	201,560
Fabricated Structural Steel	Lbs.		13,910	13,910
Class 1+25% Exc. for Struct.	*Cu. Yds.*	*5.5*		*5.5*
Test Holes	*Lin. Ft.*	*113*		*113*

Note: All excavation for bridge **was paid** for as Class 1 Excavation ... Quantities of Class 1 Excavation for structures includes ... amount of excavation below limits of Roadway Excavation. (See Special Provisions.)

All concrete and reinforcing steel above footings is included in Superstructure quantities.

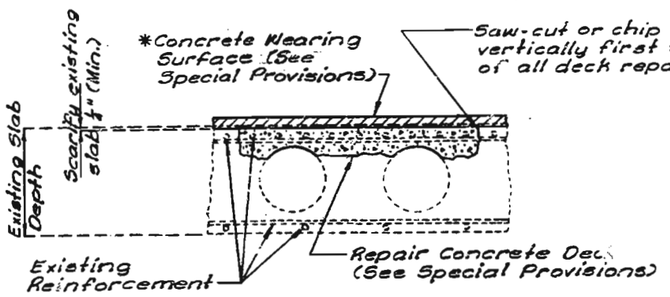
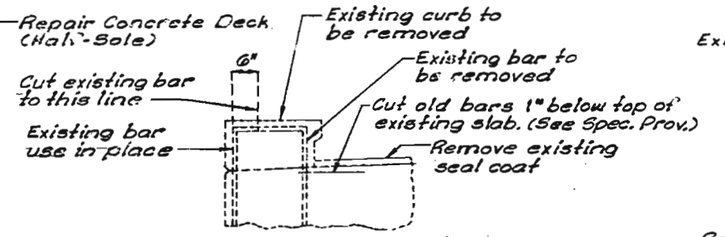
SECTION THRU SLAB



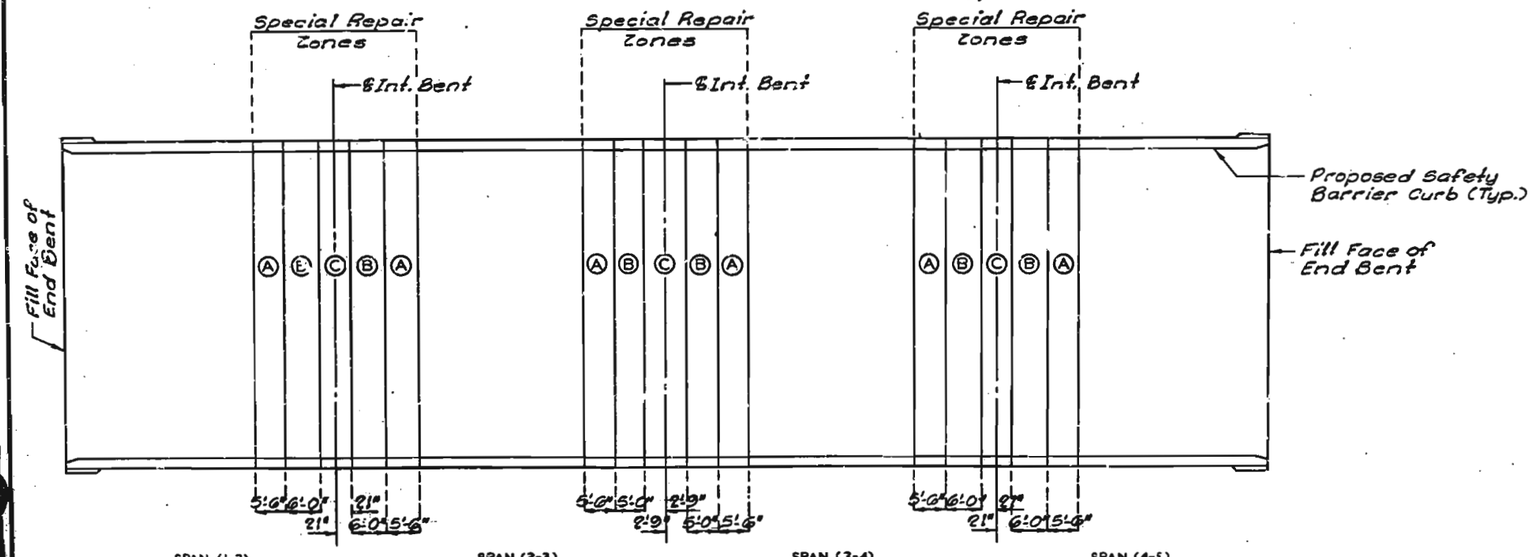
HALF-SOLED AREA



Note: All existing longitudinal curb reinforcement to be removed.

DETAILS OF EXISTING CURB REMOVAL

Note: All existing curb reinforcement outside the limits of the proposed safety barrier curb shall be cut 1" below top of existing slab. Areas of existing slab outside the limits of the proposed safety barrier curb shall be covered with either 1¾" latex modified concrete or 2¼" low slump concrete. See Special Provisions.



PLAN OF SLAB SHOWING SPECIAL REPAIR ZONES

Note: Sequence of repairs shall be in alphabetical order. Zones with the same letter designation may be repaired at the same time.

Any repair in the remainder of the bridge that is within 4'-6" of Zone A shall be completed before removing old concrete in Zones A.

GENERAL NOTES:

Design Specifications: A.A.S.H.T.O. - 1977 and Interims thru 1985. Load Factor Design.

Design Unit Stresses:
Class BI Concrete f'_c = 4,000 psi
Reinforcing Steel (Grade 60) f_y = 60,000 psi

Traffic Maintained:
One lane of traffic in each direction to be maintained during construction.

Existing Work:
Outline of old work is indicated by light dashed lines. Heavy lines indicate new work.

Bars bonded in old concrete not removed shall be cleanly stripped and embedded into new concrete where possible. If length is available, old bars shall extend into new concrete at least 40 diameters for smooth bars and 30 diameters for deformed bars, unless otherwise noted.

Reinforcing Steel:
Minimum clearance to reinforcing steel shall be 1½" unless otherwise shown.

Joint Filler:
All joint filler shall meet the requirements of Std. Spec. 1057.2.4, except as noted.

Roadway Surface:
Roadway surfacing adjacent to bridge ends to match existing concrete deck plus 1½"± or 2"±.

ESTIMATED QUANTITIES

	24	5 R9	Barrier Curb	35'0"	35'9"	895

Note: All bars shall be epoxy coated.

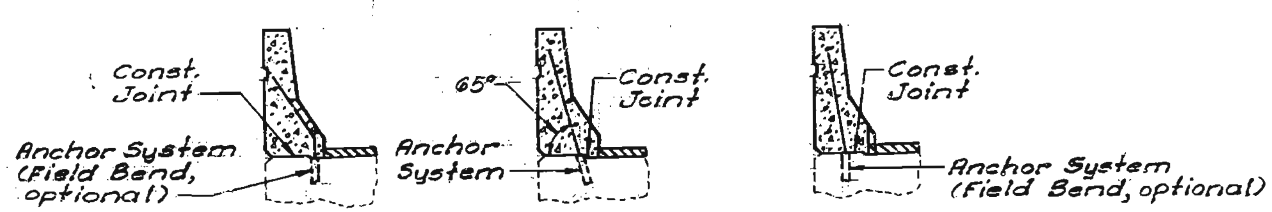
2-additional R8 bars are included for testing purposes.

Note: Inside diameter of all bends shown for R1 & R2 bars shall be 2½". All other bars are straight.

Nominal Lengths - are based on out to out dimensions shown in bending diagrams and are listed for fabricator's use (nearest inch).

Actual Lengths - are measured along centerline bar to the nearest inch.

Payweights are based on actual lengths.



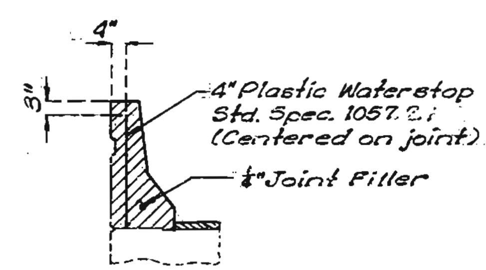
SECTION E-E — SECTION E-E (OPTIONAL ANCHORING SYSTEM) — SECTION D-D

DETAILS OF ANCHOR SYSTEMS

Note: The contractor shall use one of the anchor systems listed in the Job Special Provisions for the Safety Barrier Curb.

These anchor systems shall be installed according to the manufacturer's specifications, except that an epoxy coated ⅝"φ, Grade 60 reinforcing bar 2'-6" long shall be substituted for the threaded rod stud and if the Kelibond/Keligroutin resin bonding anchor system is used the minimum embedment in old concrete shall be 6½".

Cost of furnishing and installing the anchor system complete in place shall be included in the price bid per linear foot of safety barrier curb.



DETAILS OF PLASTIC WATERSTOP

Note: Plastic waterstop shall be placed in all safety barrier curb filled joints.

Cost of plastic waterstop complete in place to be included in contract unit price for safety barrier curb.

SODDED FLAT BOTTOM OR INTERCEPTION DITCHES

GENERAL NOTES

For details of superelevation and widening of horizontal curves, all pavement appurtenances, drainage items, etc, see other drawings.

In transitioning from one cut or fill slope to another, use a 25' transition beginning at a point 25' back along that which would normally be the flatter slope and ending the transition at the actual point where the steeper slope is required. If the actual limits requiring a steeper slope is less than 25' in length, do not change to the steeper slope.

All information shown on these Typical Sections is for the purpose of indicating general design and construction details. Actual construction of roadway widths, slopes, depths and type of ditches, undergraded cuts, and other features, shall conform to the details shown on Cross Sections and Plan-Profile sheets or as directed by the Engineer.
