YOUR VISION FOR GRAVOIS

Your input will guide what happens on Gravois in 2029 and beyond.

Some potential improvements you see today may come after 2029.

Your input has helped this project team to prioritize improvements, and will continue to do so.

What guides the 2029 project?

- MoDOT and the City of St. Louis are prioritizing safety improvements that will reduce fatalities and serious injuries on Gravois.
- Budget, engineering, and agency coordination will determine what the 2029 improvements will include (in addition to the planned resurfacing).
- The 2029 project is a major investment in Gravois, but improvements will continue beyond 2029. MoDOT and the City will monitor project outcomes, reevaluate future needs, and pursue funding for additional improvements as appropriate.

What has shaped the alternatives and concepts presented today?

Data: Crash history, traffic counts, and safety analyses
Community Input: Feedback from advisory committees and public meetings.
Coordination: Conversations with partners along Gravois, like the City of St. Louis, Metro, schools, and other organizations.

These concepts can still change!

The alternatives and concepts presented today are not final. Your input will help us choose a preferred approach and a plan that will guide improvements in 2029 and beyond.
