AMP Results Dashboard

Description and Benefit

MoDOT's Asset Management Plan (AMP) reporting has been transformed from difficult-to-interpret spreadsheets into an interactive Power BI dashboard that makes statewide and district-level outcomes clear, comparable, and fast to analyze. The dashboard centralizes measures across costs, pavements, bridges, and district summaries, with year filters and drilldowns that reveal route-type details (e.g., interstates vs. majors), bridge work type cost comparisons (replacement, redeck, rehabilitation), and goal-to-plan-to-STIP lane-mile alignment. District pages consolidate all measures for side-by-side, year-over-year review. First used live in the 2025 annual management review, the dashboard reduces time spent wrangling data, surfaces planning variances that signal process improvements, and enables better decisions that strengthen system performance and customer experience.
