Standard Drawing Guidance (do not show on plans):

- For barrier setting on end of sides:
  Exclude "T" frame and bracket.
  Unless measurement is from end of slab to end of slab.

- Plastic waterstop and notes are required for all grout openings over reinforcement and poorly placed.
  Barriers on T not required.

- For all grout openings, use a minimum of barriers along the joint.
  Refer to EPG 751.12.1.2.1 for lengths of C bars.

- Remove for CIP slab.

Dimensions are based on a 0.5-inch-thick slab. Identify accordingly the outside dimensions to rear barriers as per Figure 7.1 and those as shown in the bottom view.

- Dimension for slip-formed option only. Indicates left or right of both barriers in a lane.

For slip-formed option, both sides of barrier joint shall be considered completely covered by the contract unit price for Type H Barrier per linear foot. Measurement of barrier is to the nearest linear foot.

Concrete in barrier shall be Class B.
Concrete in barrier shall be Class B.
Concrete in barrier shall be Class B.
Concrete in barrier shall be Class B.

Concrete and reinforcement shall be considered completely placed and ready for the use of the specified concrete in barrier and the 2.89 square feet.
