Standard Drawing Guidance (do not show on plans):

1. Show any required construction joints and show and call out any required staged construction joints.
2. Show any required construction joints and show and call out any required staged construction joints.
3. Show any required construction joints and show and call out any required staged construction joints.

Detailed Drawing Guidance (do not show on plans):

1. Show any required construction joints and show and call out any required staged construction joints.
2. Show any required construction joints and show and call out any required staged construction joints.
3. Show any required construction joints and show and call out any required staged construction joints.

Standard Drawing Guidance (do not show on plans):

1. Show any required construction joints and show and call out any required staged construction joints.
2. Show any required construction joints and show and call out any required staged construction joints.
3. Show any required construction joints and show and call out any required staged construction joints.

Detailed Drawing Guidance (do not show on plans):

1. Show any required construction joints and show and call out any required staged construction joints.
2. Show any required construction joints and show and call out any required staged construction joints.
3. Show any required construction joints and show and call out any required staged construction joints.

General Notes:

All joints in the bridge approach slab and sleeper slab shall be in accordance with Sec 1057 for wording of notes when semi-deep abutments are used. If the end of a wing wall extends beyond the end of the bridge approach slab, it will be necessary to revise the length of the sleeper slab shown on the sleeper slab and under the sleeper slab and thus this detail is shown. This shall be tapered flared drain pipe at this point.

General Notes:

All joints in the bridge approach slab and sleeper slab shall be in accordance with Sec 1057 for wording of notes when semi-deep abutments are used. If the end of a wing wall extends beyond the end of the bridge approach slab, it will be necessary to revise the length of the sleeper slab shown on the sleeper slab and under the sleeper slab and thus this detail is shown. This shall be tapered flared drain pipe at this point.

General Notes:

All joints in the bridge approach slab and sleeper slab shall be in accordance with Sec 1057 for wording of notes when semi-deep abutments are used. If the end of a wing wall extends beyond the end of the bridge approach slab, it will be necessary to revise the length of the sleeper slab shown on the sleeper slab and under the sleeper slab and thus this detail is shown. This shall be tapered flared drain pipe at this point.

General Notes:

All joints in the bridge approach slab and sleeper slab shall be in accordance with Sec 1057 for wording of notes when semi-deep abutments are used. If the end of a wing wall extends beyond the end of the bridge approach slab, it will be necessary to revise the length of the sleeper slab shown on the sleeper slab and under the sleeper slab and thus this detail is shown.
