Bucket Buddy

Description and Benefit

Bucket Buddy is a safety-focused tool designed to securely hold buckets during mixing operations, eliminating the need for a coworker to manually stabilize the bucket. Previously, workers had to kneel on the ground, risking exposure to toxic fumes and potential injury from slipping drills. Bucket Buddy removes these hazards by providing a stable, hands-free solution that allows operators to mix materials safely and efficiently. This innovation improves workplace safety, reduces physical strain, and minimizes the risk of accidents.
