CIC Power Box

Description and Benefit

This innovation is a truck toolbox that offers the ability to have electrical power and an air compressor out in the field without having to run a generator. The CIC Power Box enhances roadside safety by delivering a reliable power source for tools and equipment. With its built-in, weatherproof outlets and air compressor direct vehicle integration, you can quickly plug in your tools and equipment to continue working without delay. This ensures that you can operate air compressors, or other equipment directly from your vehicle. By having immediate access to power, you can reduce the time spent on the roadside, minimize exposure to traffic and create a safer environment for both workers and motorists. This also streamlines setup and reduces clutter which allows the operator to focus more on the task and less on logistics.
