ADDENDUM NO. 2

Notice to All Persons and Firms Proposing to Submit a Bid or Furnish Materials for North Elizabeth Avenue ARS Resurfacing St. Louis County Project No. AR-1736 Federal Project No. STP-5513(610)

The construction contract for this project has been revised as follows:

No. 1

Insert the attached JSP 100.70.6 Federal Aviation Administration (FAA) Coordination

ATTENTION BIDDERS: THE ADDENDUM ACKNOWLEDGEMENT IN THE BID DOCUMENTS MUST BE COMPLETED AND SUBMITTED WITH ALL BID PROPOSALS.

Sincerely,

Kori Neely, P.E.
Supervisor, Project Managers - Roadway Project Development

JWK/DJF/ang

Attachments: JSP 100.70.6 (3 pages), FAA Studies 2022-ACE-5122-OE through 5140-OE and 3697-OE, Post Construction (79 pages) FAA Studies 2022-ACE-3678-OE through 3696-OE, Construction Phase (90 pages)
100.70.6 FEDERAL AVIATION ADMINISTRATION (FAA) COORDINATION

A. Description

This project:

- is located “near” a public use airport or heliport

which requires adherence to FAA Regulation Part 77. “Near” to a public use airport or heliport is defined as follows:

- 20,000’ (four [4] miles) from an airport with a runway length of at least 3200’
- 10,000’ (two [2] miles) from an airport with runway length less than 3200’
- 5000’ (one [1] mile) from a public use heliport

B. Requirements

1. The maximum above ground level height of the permanent improvements or equipment and the assumed maximum above ground level height of the Contractor’s temporary construction or installation equipment used for evaluating this project for compliance with FAA Regulation Part 77 are as follows:

a. Permanent Equipment/Features:

- Twenty-three (23) foot maximum for replacement of traffic signal equipment (Aeronautical Study No. 2022-ACE-3697-OE).

b. Temporary Equipment/Features:

2. If the permanent improvements/equipment and/or the Contractor’s construction/installation equipment will extend above 200’ anywhere within the project limits and/or above the assumed maximum heights at the locations indicated in Section B.1 of this job special provision, the Contractor shall work with the Engineer to complete Form 7460-1 (or revise the original Form 7460-1 based upon the new proposed height) and resubmit to the Federal Aviation Administration for a determination on compliance with FAA Regulation Part 77. Please note that all work associated with Form 7460-1 (or revised Form 7460-1) shall not be performed prior to receipt of an FAA determination; which could take up to 45 days. Additional information/guidance can be found in Section 235.8 of MoDOT’s Engineering Policy Guide.
3. If the permanent improvements/equipment and/or the Contractor's construction/installation equipment will remain below 200’ anywhere within the project limits and/or below the assumed maximum heights at the locations indicated in Section B.1 of this job special provision, no further action will be required regarding Form 7460-1 (or revised Form 7460-1) to fulfill the requirements set forth in FAA Regulation Part 77.

4. Form 7460-2, Notice of Actual Construction or Alteration, must be e-filed within five (5) days after the construction reaches its greatest height (Form 7460-2, Part 2). Form 7460-2 must be filed for all locations specified in the project aeronautical study determination letters (included with this addendum for this Contract).

5. The Contractor shall contact both of the following St. Louis Lambert International Airport managers no later than 72 hours in advance of construction commencement on this project and continue with routine updates during construction of this project (frequency to be determined by the airport managers):

   Elizabeth Smart                      Jonathan Strobel
   Construction Maintenance Manager    Environmental Health & Safety Manager
   St. Louis Lambert International Airport St. Louis Lambert International Airport
   (314) 890-1331                      (314) 551-5035

   a. The Contractor shall provide the following items to the airport managers (including any updates upon request during construction of this project):

      • Description of the project scope and limits.
      • List of construction equipment that will be used on-site.
      • Copy of the project schedule.
      • The name of the Contractor’s on-site superintendent/project manager.
      • Any other requested information associated with and/or required to comply with this job special provision.

   b. If the height of any of the Contractor’s equipment needs to be lowered at any time during construction of this project, the Airport’s Air Traffic Control Manager will contact the Contractor’s on-site superintendent/project manager immediately. Therefore, the Contractor must notify the above listed airport managers of any substitutions or permanent staffing changes to the on-site superintendent/project manager position promptly. The Airport’s Air Traffic Control Manager must be able to successfully contact an on-site superintendent/project manager daily.

6. Obstruction marking and lighting for aviation safety are not required for this project. If obstruction marking and lighting are utilized on a voluntary basis, the FAA recommends that the obstruction marking and lighting be installed in accordance with FAA Advisory Circular 70/7460-1M.
C. **Basis of Payment**

No direct payment will be made for compliance with this provision; including any costs incurred to obtain any FAA determination revisions or submit any required final FAA documentation. Contract time extensions may be granted by the Director for any time lapsed to receive FAA determination revision decisions from the FAA. Any time extension requests (for the time lapsed while awaiting determination revision decisions from the FAA) shall include appropriate documentation verifying that the associated construction task is/has become a critical path item with regard to the project construction schedule.
** DETERMINATION OF NO HAZARD TO AIR NAVIGATION **

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

- **Structure:** Public Road TRAVERSEWAY01
- **Location:** Ferguson, MO
- **Latitude:** 38-46-15.55N NAD 83
- **Longitude:** 90-18-22.05W
- **Heights:**
  - 614 feet site elevation (SE)
  - 1 feet above ground level (AGL)
  - 615 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

This aeronautical study included evaluation of a structure with an above ground level height that would at times be increased by the presence of mobile objects. For the purpose of this aeronautical study, the above ground level height was adjusted upward in accordance with 14 CFR 77.9(c) and the proposal was studied as a traverseway.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.
This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study included evaluation of a structure that exists at this time. Action will be taken to ensure aeronautical charts are updated to reflect the most current coordinates, elevation and height as indicated in the case description.

If we can be of further assistance, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-5122-OE.

Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.
This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study included evaluation of a structure that exists at this time. Action will be taken to ensure aeronautical charts are updated to reflect the most current coordinates, elevation and height as indicated in the case description.

If we can be of further assistance, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-5130-OE.

** DETERMINATION OF NO HAZARD TO AIR NAVIGATION **

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Public Road TRAVERSEWAY10  
Location: Ferguson, MO  
Latitude: 38-45-37.61N NAD 83  
Longitude: 90-17-57.13W  
Heights: 624 feet site elevation (SE)  
1 feet above ground level (AGL)  
625 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

This aeronautical study included evaluation of a structure with an above ground level height that would at times be increased by the presence of mobile objects. For the purpose of this aeronautical study, the above ground level height was adjusted upward in accordance with 14 CFR 77.9(c) and the proposal was studied as a traverseway.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.
This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study included evaluation of a structure that exists at this time. Action will be taken to ensure aeronautical charts are updated to reflect the most current coordinates, elevation and height as indicated in the case description.

If we can be of further assistance, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-5131-OE.

** DETERMINATION OF NO HAZARD TO AIR NAVIGATION **

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Public Road TRAVERSEWAY 19  
Location: Ferguson, MO  
Latitude: 38-44-57.69N NAD 83  
Longitude: 90-17-58.44W  
Heights: 575 feet site elevation (SE)  
1 feet above ground level (AGL)  
576 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure does not exceed obstruction standards and would not be a hazard to air navigation provided the following condition(s), if any, is(are) met:

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

This aeronautical study included evaluation of a structure with an above ground level height that would at times be increased by the presence of mobile objects. For the purpose of this aeronautical study, the above ground level height was adjusted upward in accordance with 14 CFR 77.9(c) and the proposal was studied as a traverseway.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.
This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study included evaluation of a structure that exists at this time. Action will be taken to ensure aeronautical charts are updated to reflect the most current coordinates, elevation and height as indicated in the case description.

If we can be of further assistance, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-5140-OE.

**PROJECT STATUS FOLLOW-UP**

The Federal Aviation Administration issued a determination dated 06/13/2022 concerning:

- **Structure:** Pole SIGNAL01
- **Location:** Ferguson, MO
- **Latitude:** 38-45-25.12N NAD 83
- **Longitude:** 90-17-56.36W
- **Heights:**
  - 622 feet site elevation (SE)
  - 23 feet above ground level (AGL)
  - 645 feet above mean sea level (AMSL)

As a condition of your FAA determination, you were required to complete FAA Form 7460-2, Supplemental Notice. Our records indicate that you have not completed this requirement yet.

As a result of this structure being critical to flight safety, it is required that the FAA be kept appraised as to the status of the project. Failure to respond to periodic FAA inquiries could invalidate your determination.

In your previous response to our Project Status Request you indicated:

If we can be of further assistance, please contact our office at (817) 222-4037, or nathan.d.shelly@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-3697-OE.

Signature Control No: 526470818-607966256

Additional Information
Please review the options and complete the required action via your registered e-filing account. If applicable, attach the necessary documentation.

**THE STRUCTURE(S) INCLUDES TRANSMITTING FREQUENCIES AND/OR IS SUBJECT TO THE ISSUANCE OF A CONSTRUCTION PERMIT BY THE FEDERAL COMMUNICATIONS COMMISSION (FCC).**

ACTION REQUIRED: Your response may be submitted via email to nathan.d.shelly@faa.gov or by attaching your documents to your registered e-filing account at https://oeaaa.faa.gov. Failure to attach the necessary documentation, including a copy of your FCC construction permit or, if not yet issued, a copy of your application for a construction permit will result in your determination being considered expired.

**THE PROPOSAL WAS RE-FILED AND ASSIGNED A NEW AERONAUTICAL STUDY NUMBER. THIS DETERMINATION SHOULD BE TERMINATED AND SUPERSEDED BY ____-____-____-OE.**

ACTION REQUIRED: Your response may be submitted via email to nathan.d.shelly@faa.gov or by attaching this completed letter to your registered e-Filing Account at https://oeaaa.faa.gov.

**THE PROJECT IS ABANDONED OR DISMANTLED.**

ACTION REQUIRED: To submit notice, login to your account or register as a new user at https://oeaaa.faa.gov. Search archives to locate the subject aeronautical study number (ASN) and submit the date of abandonment or dismantlement via 7460-2 electronically.

**CONSTRUCTION STARTED, BUT STRUCTURE IS NOT AT ITS GREATEST HEIGHT YET.**

To submit notice of construction, login to your account or register as a new user at https://oeaaa.faa.gov. Search archives to locate the subject aeronautical study number (ASN) and submit 7460-2 Part 1 electronically. NOTE: If your construction information includes any changes to the originally submitted coordinates or an increased AGL height, you will be notified by the system that a new filing is required. A new study will be automatically generated by the system when you proceed so that a revised determination may be issued.

**CONSTRUCTION REACHED ITS GREATEST HEIGHT.**

To submit notice of construction, login to your account or register as a new user at https://oeaaa.faa.gov. Search archives to locate the subject aeronautical study number (ASN) and submit 7460-2 Part 2 electronically. NOTE: If your construction information includes any changes to the originally submitted coordinates or an increased AGL height, you will be notified by the system that a new filing is required. A new study will be automatically generated by the system when you proceed so that a revised determination may be issued.

Note: Please ensure that the Sponsor/Representative contact information on file with the subject ASN is kept up-to-date to ensure timely receipt of FAA correspondence. To revise sponsor contact information, login to your account and enter the updated sponsor information using the My Sponsors link and select the appropriate ASNs.
There has been no response to our Project Status Request letter issued for this study. At this time, your study has expired. We are allowing 30 days for you to submit FAA Form 7460-2 Part 2, Notice of Actual Construction or Alteration, or notification the project has been abandoned. Failure to respond will result in the termination of this aeronautical study.
**DETERMINATION OF NO HAZARD TO AIR NAVIGATION FOR TEMPORARY STRUCTURE**

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Mobile Construction Equipment RDWY01TEMP  
Location: Ferguson, MO  
Latitude: 38-46-15.55N NAD 83  
Longitude: 90-18-22.05W  
Heights: 614 feet site elevation (SE)  
30 feet above ground level (AGL)  
644 feet above mean sea level (AMSL)

This aeronautical study revealed that the temporary structure does not exceed obstruction standards and would not be a hazard to air navigation provided the condition(s), if any, in this letter is (are) met:

**SEE ATTACHMENT FOR ADDITIONAL CONDITION(S) OR INFORMATION**

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of a structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this temporary structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

A copy of this determination will be forwarded to the Federal Aviation Administration Flight Procedures Office if the structure is subject to the issuance of a Notice To Airman (NOTAM).
If you have any questions, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-3678-OE

Proposal: To construct and/or operate a(n) Mobile Construction Equipment to a height of 30 feet above ground level, 644 feet above mean sea level.

Location: The structure will be located 3.28 nautical miles northeast of STL Airport reference point.

Part 77 Obstruction Standard(s) Exceeded and Aeronautical Impacts, if any:

Aeronautical study revealed that the temporary structure will not exceed any Part 77 obstruction standard. Aeronautical study confirmed that the temporary structure will have no effect on any existing or proposed arrival, departure or en route instrument/visual flight rules (IFR/VFR) operations or procedures. Additionally, aeronautical study confirmed that the temporary structure will have no physical or electromagnetic effect on the operation of air navigation and communications facilities and will not impact any airspace and routes used by the military. Based on this aeronautical study, the FAA finds that the temporary structure will have no adverse effect on air navigation and will not impact any aeronautical operations or procedures.

Based on this aeronautical study, the structure would not constitute a substantial adverse effect on aeronautical operations or procedures because it will be temporary. The temporary structure would not be considered a hazard to air navigation provided all of the conditions specified in this determination are strictly met.

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

It is required that the manager of ST LOUIS LAMBERT INTL AIRPORT (STL), Operations Center, (314) 426-8040 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site.

It is required that the manager of ST LOUIS AIR TRAFFIC CONTROL TOWER, James McGhee, Support Specialist, (314) 890-4738 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site. Additionally, please provide contact information for the onsite operator in the event that Air Traffic Control requires the temporary structure to be lowered immediately.

This determination expires on 12/13/2023 unless extended, revised, or terminated by the issuing office.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.
**DETERMINATION OF NO HAZARD TO AIR NAVIGATION FOR TEMPORARY STRUCTURE**

Part 77 Obstruction Standard(s) Exceeded and Aeronautical Impacts, if any:

Aeronautical study revealed that the temporary structure will not exceed any Part 77 obstruction standard. Aeronautical study confirmed that the temporary structure will have no effect on any existing or proposed arrival, departure or en route instrument/visual flight rules (IFR/VFR) operations or procedures. Additionally, aeronautical study confirmed that the temporary structure will have no physical or electromagnetic effect on the operation of air navigation and communications facilities and will not impact any airspace and routes used by the military. Based on this aeronautical study, the FAA finds that the temporary structure will have no adverse effect on air navigation and will not impact any aeronautical operations or procedures.

Based on this aeronautical study, the structure would not constitute a substantial adverse effect on aeronautical operations or procedures because it will be temporary. The temporary structure would not be considered a hazard to air navigation provided all of the conditions specified in this determination are strictly met.

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

It is required that the manager of ST LOUIS LAMBERT INTL AIRPORT (STL), Operations Center, (314) 426-8040 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site.

It is required that the manager of ST LOUIS AIR TRAFFIC CONTROL TOWER, James McGhee, Support Specialist, (314) 890-4738 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site. Additionally, please provide contact information for the onsite operator in the event that Air Traffic Control requires the temporary structure to be lowered immediately.

This determination expires on 12/13/2023 unless extended, revised, or terminated by the issuing office.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.
**DETERMINATION OF NO HAZARD TO AIR NAVIGATION FOR TEMPORARY STRUCTURE**

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Mobile Construction Equipment RDWY07TEMP  
Location: Ferguson, MO  
Latitude: 38-45-50.84N NAD 83  
Longitude: 90-18-01.29W  
Heights: 641 feet site elevation (SE)  
30 feet above ground level (AGL)  
671 feet above mean sea level (AMSL)

This aeronautical study revealed that the temporary structure does not exceed obstruction standards and would not be a hazard to air navigation provided the condition(s), if any, in this letter is (are) met:

**SEE ATTACHMENT FOR ADDITIONAL CONDITION(S) OR INFORMATION**

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of a structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this temporary structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

A copy of this determination will be forwarded to the Federal Aviation Administration Flight Procedures Office if the structure is subject to the issuance of a Notice To Airman (NOTAM).
If you have any questions, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-3684-OE

This determination includes all previously filed frequencies and power for this structure.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of a structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this temporary structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

A copy of this determination will be forwarded to the Federal Aviation Administration Flight Procedures Office if the structure is subject to the issuance of a Notice To Airman (NOTAM).
If you have any questions, please contact our office at (816) 329-2508, or vee.stewart@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2022-ACE-3690-OE

Proposal: To construct and/or operate a(n) Mobile Construction Equipment to a height of 30 feet above ground level, 649 feet above mean sea level.

Location: The structure will be located 3.37 nautical miles east of STL Airport reference point.

Part 77 Obstruction Standard(s) Exceeded and Aeronautical Impacts, if any:

Aeronautical study revealed that the temporary structure will not exceed any Part 77 obstruction standard. Aeronautical study confirmed that the temporary structure will have no effect on any existing or proposed arrival, departure or en route instrument/visual flight rules (IFR/VFR) operations or procedures. Additionally, aeronautical study confirmed that the temporary structure will have no physical or electromagnetic effect on the operation of air navigation and communications facilities and will not impact any airspace and routes used by the military. Based on this aeronautical study, the FAA finds that the temporary structure will have no adverse effect on air navigation and will not impact any aeronautical operations or procedures.

Based on this aeronautical study, the structure would not constitute a substantial adverse effect on aeronautical operations or procedures because it will be temporary. The temporary structure would not be considered a hazard to air navigation provided all of the conditions specified in this determination are strictly met.

Based on this evaluation, marking and lighting are not necessary for aviation safety. However, if marking/lighting are accomplished on a voluntary basis, we recommend it be installed in accordance with FAA Advisory circular 70/7460-1 M.

It is required that the manager of ST LOUIS LAMBERT INTL AIRPORT (STL), Operations Center, (314) 426-8040 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site.

It is required that the manager of ST LOUIS AIR TRAFFIC CONTROL TOWER, James McGhee, Support Specialist, (314) 890-4738 be notified at least 3 business days prior to the temporary structure being erected and again when the structure is removed from the site. Additionally, please provide contact information for the onsite operator in the event that Air Traffic Control requires the temporary structure to be lowered immediately.

This determination expires on 12/13/2023 unless extended, revised, or terminated by the issuing office.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.
**DETERMINATION OF NO HAZARD TO AIR NAVIGATION FOR TEMPORARY STRUCTURE**

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

- **Structure:** Mobile Construction Equipment RDWY14TEMP
- **Location:** Ferguson, MO
- **Latitude:** 38-45-18.40N NAD 83
- **Longitude:** 90-17-58.31W
- **Heights:**
  - 603 feet site elevation (SE)
  - 30 feet above ground level (AGL)
  - 633 feet above mean sea level (AMSL)

This aeronautical study revealed that the temporary structure does not exceed obstruction standards and would not be a hazard to air navigation provided the condition(s), if any, in this letter is (are) met:

**SEE ATTACHMENT FOR ADDITIONAL CONDITION(S) OR INFORMATION**

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights and frequencies or use of greater power, except those frequencies specified in the Colo Void Clause Coalition; Antenna System Co-Location; Voluntary Best Practices, effective 21 Nov 2007, will void this determination. Any future construction or alteration, including increase to heights, power or the addition of other transmitters, requires separate notice to the FAA. This determination includes all previously filed frequencies and power for this structure.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of a structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this temporary structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.
