Drip bars should be located between 5 feet from center of expansion device and 1 foot short of the end of the partial coating limit.

Details shown are for plate girder. For wide flange beam, change "Girder" to "Beam" (5 places).

Note: Steel for drip bars shall be same grade as bottom flange.

Standard Drawing Guidance (do not show on plans): Use this detail near expansion device to deflect water away from girder.

DRIP BAR DETAIL NEAR EXPANSION DEVICE

SECTION A-A

Standard Drawing Guidance (do not show on plans): Use this detail near bent, on outside of exterior girder only, to deflect water away from bent.

DRIP BAR DETAIL NEAR BENTS

SECTION B-B

Note: Sheet for drip bars shall be same grade as bottom flange.
