## District Bridge Engineer Request [Video](#)

### Description

This innovation is a SharePoint List that was created in house by design staff with input from the Southwest District Bridge Engineer. It becomes the repository for project related decisions in the event any treatment is needed for a structure. In the event of a new person being in that position or assigned the project, this allows for a seamless transition of the data between two different District Bridge Engineers or Designers.

### Benefit

This innovation simplifies work by sending the District Bridge Engineer the information needed to complete the assessment then informs the Highway Designer when the recommendations are prepared. It also provides one location for both the District Bridge Engineer and the Highway Designers to share information that affect the projects that are produced.

### Materials and Labor

The total of amount of labor was about 47 hours.
