

# Project Overview

MoDOT is planning improvements on I-44 in Laclede County to replace aging pavement and upgrade key sections of the corridor. The project includes reconstruction in both directions, pavement replacement, and three bridge rehabilitations, with potential shoulder improvements under consideration. These upgrades will enhance drivability, improve safety, and address drainage needs along this 10.5-mile section of I-44.

## What This Means For Drivers

- A smoother, more consistent drive.
- Improved safety across the entire area.
- A new roadway built to last longer with fewer future repairs and maintenance costs.

## Project Area

The improvements span approximately 10.5 miles of I-44 in Laclede County, from Route F to Missouri Route 133.
