HPUN Dashboard

Description and Benefit

The High Priority Unfunded Needs (HPUN) dashboard modernizes MoDOT's process for tracking and communicating critical transportation needs across the state. Built in ArcGIS, it replaces static spreadsheets and PDFs with an interactive tool that provides real-time visibility into tier progress and project details. Users can filter by tier or geography—such as MoDOT district, legislative districts, or county—and view both summary data and individual project information. The dashboard includes two versions: an internal live-data view for staff and a public version updated annually with commission-approved data. This innovation improves planning, transparency, and collaboration, reduces one-off data requests, and helps ensure Missouri's transportation priorities are clearly understood and efficiently managed.
