

Tool and Equipment April 2026

Hitch Saver

Description and Benefit

The Hitch Saver is a simple, cost-effective solution designed to secure drawbar bolts and prevent them from loosening, backing out, or breaking. By keeping bolts firmly in place, it reduces equipment downtime, repair costs, and the risk of damage to tractors or mowers. This innovation saves time by minimizing breakdowns, eliminating frequent adjustments, and streamlining pre-trip inspections. Safety is improved by preventing hitch separation and reducing the risk of roadside failures or operator injury. Installation takes about two hours and costs only \$22 for materials, with no recurring expenses. Durable and affordable, Hitch Saver ensures equipment reliability, simplifies maintenance, and supports uninterrupted operations.
