

## Hydraulic Coupler Pressure Release

### Description and Benefit

This innovation is a system of four hydraulic couplers to release the pressure off a truck, skid steer, loader or hydraulic hoses. This innovation is a safer and cleaner method to hook up hydraulic attachments. The cleaner installment reduces the chance of ruining clothing and PPE due to leaked hydraulic oil. When getting ready for a snow shift, the worker can take the couplers with them for hooking up sanders and the plows.
