

Tool and Equipment April 2026

Jack The Ripper

Description and Benefit

The Jack the Ripper innovation is a cost-effective, universal tool designed to simplify the removal of signs from stuck sign bases. Built from a modified trailer jack with a custom welded attachment and an impact socket, this device fits around any signpost for easy extraction. Its simple design allows operators to quickly secure the tool, use a ½-inch impact wrench, and remove the sign with minimal effort. This solution reduces manual labor, saves time, and eliminates the need for excessive force or specialized equipment. Jack the Ripper is durable, versatile, and highly efficient, making sign removal safer and more streamlined across all operations.
