FOCUS
STRATEGIC INITIATIVES FOR CONTINUOUS IMPROVEMENT

July 2019

SAFETY • SERVICE • STABILITY
Director’s Introduction

You may have heard that we have received an $81.2 million INFRA grant to help construct a new I-70 Missouri River Bridge located at Rocheport near the Boone/Cooper county lines and much-needed climbing lanes on I-70 at Mineola Hill in Montgomery County. A lot of hard work went into our receiving that grant, not the least of which came from our Congressional delegation and Gov. Mike Parson who has been a strong supporter of Missouri’s infrastructure since he took office last year. This grant will result in more than $700 million worth of work on our state’s roads and bridges, which will enable us to further our goals of safety, service and stability.

As passed by the 2019 General Assembly and signed by the governor, the state budget provided $50 million in general revenue to make a down payment to jump start the governor’s bridge program in Fiscal Year 2020. MoDOT has been hard at work and will have 45 bridges under contract by the end of the calendar year.

Additionally, the same legislation which was contingent on our receiving the INFRA grant will enable MoDOT to bond $301 million to repair or replace another 215 bridges. This Focus on Bridges will ensure our promise of safety to our shareholders while helping bring our bridge conditions report card up from a D. We’re currently ranked 38th for most bridge deck area in poor condition. We have the opportunity to turn that around.

We’ll also free up $351 million that had been committed to bridge projects in the current STIP and use that money for other high-priority transportation needs across the state. This funding will be added to the January 2020 financial forecast and available to our planning partners in the 2021-2025 STIP. That will help us improve safety for everyone who drives through the Show-Me State.

These are exciting times for us and a great deal of work lies ahead. With this additional work will come challenges. However, as our succession plan continues to roll out, I know we are setting ourselves up for future success.

As we move forward with the increase in projects coming our way, our focus must remain on our core mission of delivering quality transportation projects and operating and maintaining the state highway system, as well as on the safety and wellbeing of each other. As long as we remain committed to those fundamental tasks, we will be able to deliver safety, service and stability to our customers as expected.

Thanks for your hard work and dedication!

Patrick McKenna
# MISSOURI Department of Transportation

2018 Version 1.0

## ASPIRATION

We will provide a world-class transportation system that is safe, innovative, reliable, and dedicated to a prosperous Missouri

## THEMES

### Safety

Keep citizens and employees safe

### Service

Deliver transportation solutions of great value and use resources wisely

### Stability

Preserve and operate a reliable transportation system with an engaged workforce

## INITIATIVES

### Safety
- Improve safety culture
  - Buckle Up Phone Down, Behavior Based Safety
  - District training academy pilot
  - Development of statewide safety standard operating procedures
- Innovate to improve work zone and system-wide safety
  - Autonomous truck-mounted attenuators and flagger vehicles
  - Deploy a suite of demonstrably impactful safety techniques through a design-build program structure
- Improve partnerships with other agencies and leverage private sector
  - Predictive analytics to optimize development of enforcement and winter operations resources

### Service
- Improve communications
  - Citizen’s Guide to Transportation Funding
  - New department website
  - Better traveler information map
- Improve project management tools
  - Maintenance Management Information System
- Develop innovative program delivery
  - Design-build, design-build finance, and/or operations and maintenance options
- Value engineering
- Fleet and facilities optimization strategy implementation

### Stability
- Increase employee engagement and recognition
  - Pay plan
  - Training and certifications
  - Evaluate job descriptions
  - Leadership coins
  - Succession planning
- Research and deploy alternative funding solutions
  - Cross-cabinet collaboration
- Leverage innovations to reduce costs and improve service quality
- Cost share program with local government statewide
Missouri Department of Transportation

2018 National Performance Report Card

Road Conditions
Current Performance = 90 percent major highways (5,517 miles) in good condition. 76 percent of minor highways (28,339) in good condition.
National Ranking = Missouri had the 9th best pavements on the National Highway System. (FHWA Highway Statistics)

Customer Satisfaction
Current Performance = 83 percent satisfied customers
National Ranking = Missouri trails the highest rated company on the American Customer Satisfaction Index by only 4 percent.

Project Management
Current Performance = Missouri road and bridge projects were delivered within 0.8 percent of the award amount and 93 percent were delivered on-time.
National Ranking = Not available.

Congestion (travel time index)
Current Performance = Kansas City - 1.13   St. Louis - 1.15
National Ranking = Kansas City (9th) and St. Louis (10th) rank as some of the least congested urban areas in the U.S. (Texas Transportation Institute)

Administrative Costs
Current Performance = $2,187 cost per mile
National Ranking = Missouri has the 3rd lowest administrative cost per mile. (FHWA Highway Statistics)

Infrastructure for Business
Current Performance = No internal measure
National Ranking = A CNBC business study ranks Missouri’s infrastructure as the 11th best for business.

Number of Fatalities
Current Performance = 932 fatalities
National Ranking = Only 12 states experienced more motor vehicle deaths ranking Missouri 38th. (National Safety Council)

Bridge Conditions
Current Performance = 8 percent of Missouri bridges in poor condition by deck area.
National Ranking = Missouri ranked 38th for the percent of bridges in poor condition by deck area. (FHWA Highway Statistics-2017)

Revenue
Current Performance = $50,882 revenue per mile
National Ranking = Missouri has the 48th lowest revenue per mile. (FHWA Highway Statistics)

Employee Turnover
Current Performance = 11.99 percent
National Ranking = Not available; However, Stretch Target = 6 percent. (Price Waterhouse Cooper’s Saratoga Institute benchmark data)

RANKINGS
1-10 = A
11-20 = B
21-30 = C
31-40 = D
41-50 = F

Last updated December 2018
MODOT VALUES

SAFETY
Be Safe
Keep Customers and Ourselves Safe

SERVICE
Be Accountable
Be Respectful
Be Inclusive
Provide Outstanding Customer Service
Deliver Transportation Solutions of Great Value
Use Resources Wisely

STABILITY
Be Bold
Be Better
Be One Team
Keep Roads and Bridges in Good Condition
Operate a Reliable and Convenient Transportation System
Advance Economic Development

So we can be a great organization

Buckle Up Phone Down

SAFETY CHAMPION
Mark Shelton, District Engineer

PROJECT MANAGER:
Nicole Hood, Highway Safety and Traffic Engineer

PURPOSE OF THE PROJECT:
MoDOT is improving the safety culture through Statewide Strategic Initiatives such as Buckle Up Phone Down. In 2017, MoDOT introduced the Buckle Up Phone Down challenge to address the two most impactful actions a driver can take to prevent crashes or survive if one occurs.

The Buckle Up Phone Down challenge is an attempt to drive down the record number of fatalities and serious injuries on our roadways. The challenge encourages businesses and individuals to pledge to buckle up every person, every trip and for drivers to put their phone down. Distracted driving is a leading cause of traffic crashes, with texting and driving increasing the risk of a crash by 50 percent. In a 2018 survey conducted by AT&T, nearly nine out of ten drivers admitted to using a smart phone while driving. In addition, over 60 percent of traffic fatalities in Missouri involve unbuckled drivers or passengers who may have survived if they were properly restrained. Several hundred Missouri businesses have pledged to promote this challenge with their employees and thousands of individuals have also made the pledge to promote their own safety and that of others.

Not only are we getting individuals to accept the challenge, we’re getting businesses to support safety policies such as banning cellphone use in company vehicles and making safety belts mandatory. October 19, 2018, was MoDOT’s second annual Buckle Up Phone Down Day, a time to stand up, accept the challenge and promote roadway safety. The day was a success; Governor Mike Parson proclaimed October 19th as BUPD Day in Missouri. On that day, an additional 500 people signed up to take the challenge, social media was saturated with the BUPD message and various activities occurred across the state.

The results from Missouri’s 2018 safety belt survey indicate the challenge is helping to educate and encourage more people to buckle up. The most recent statewide safety belt use rate was 87.1 percent, which is a 3.1 percent increase over the 2017 survey results.

Champions in each district are continuing to raise awareness with the BUPD challenge by reaching out and educating all drivers about the importance of keeping the phone down. MoDOT will hold our 3rd annual BUPD day on October 29, 2019, in conjunction with a Distracted Driving Roundtable facilitated by the National Transportation Safety Board.
*2019 – Due to the backlog of data, first quarter data were derived from TMS and second quarter fatalities from MSHP radio reports.
Due to a backlog of crash reports into STARS, the serious injury measure only includes data derived from TMS. Second quarter 2019 data is unavailable on the MSHP radio reports and is incomplete in TMS.

*2019 – Due to a backlog of crash reports into STARS, the serious injury measure only includes data derived from TMS. Second quarter 2019 data is unavailable on the MSHP radio reports and is incomplete in TMS.
Behavior Based Safety

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
Chris Engelbrecht, Assistant to the CSOO – Safety & Emergency Management Unit

PURPOSE OF THE PROJECT:
The total and rate of recordable incidents are tracked to measure the department’s performance in improving safety. Behavior Based Safety is a strategic initiative that has been implemented over the last two years to improve MoDOT’s safety culture. BBS is a concept that emphasizes employees’ actively caring about the safety of themselves and their co-workers. BBS training also involves instruction regarding the ability to understand human behavior. The objective of BBS is to eliminate or, at least reduce, the number of recordable incidents and injuries attributable to employees’ actions.

MoDOT recordable incidents have plateaued over the past several years. However, these incidents increased in calendar year 2018. This may be a result of increased reporting due to the mitigation of distrust by employees and the elimination of incentive programs, especially team incentives. Incidents result in cost to MoDOT via treatment of injuries and/or payment of Workers’ Compensation benefits; typically $5-6 million annually.

The desired outcome is to reduce incidents and injuries to MoDOT employees. Efforts are underway to reiterate MoDOT’s commitment to BBS and to determine strategies to improve performance. This may include supplemental training to supervisory staff or other approaches.
OSHA private industry data is not yet available for 2018.

District Training Academy Pilot

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
James Shannon, Assistant District Maintenance Engineer

PURPOSE OF THE PROJECT:
The total and rate of recordable incidents are tracked to measure the department’s performance in improving safety. The Maintenance Training Academy is an approach to getting new employees to the point they are working safely and productively inside the department’s many shops and facilities. MoDOT workers are exposed to hazards such as high-speed traffic, use of heavy equipment, tools, machinery and driving large vehicles.

Excellent training is a cornerstone of a successful safety culture. Innovative initiatives such as Kansas City’s Training Academy will give employees the skills needed to progress in this measure. The marked success of this program is a welcome addition to the department’s safety culture. There has been an evident increase in both total and rate of recordable incidents. This is an anticipated result of employee acceptance of BBS and the maturing of safety culture. MoDOT is committed to improving this measure and recognizes that it takes time to move culture.

The District Training Academy provides consistent training by experienced instructors so employees are able to enter into their work group prepared to work safely and aware of the hazards. The academy provides valuable information to supervisors as they can quickly move forward knowing exactly where the new employees stand in their ability to carry out certain tasks safely. In pursuit of MoDOT’s mission and values, the District Training Academy will deliver successful outcomes so all employees go home safe.
OSHA private industry data is not yet available for 2018.

2019 TARGET

*OSHA private industry data is not yet available for 2018.*
Development of Statewide Safety Standard Operating Procedures

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
Chris Rutledge, Assistant District Engineer

PURPOSE OF THE PROJECT:
The total and rate of recordable incidents are tracked to measure the department’s performance in improving safety. MoDOT spends approximately $6 million each year for workplace injuries and workers’ compensation costs.

The development of Statewide Safety Standard Operating Procedures will result in the clarification and union of MoDOT’s current safety practices and processes with the department’s strategic vision and mission. Focus will be primarily in the updating of Safety Policies and Procedures and Risk-Based Assessments as well as incorporating Behavior Based Safety in the revisions. MoDOT’s evolution with BBS has emphasized the need to assure consistency in applying those concepts in its planning and carrying out of departmental field operations.

To support this effort, two comprehensive actions will be taken. First, evaluation and modification of departmental risk-based assessments will be made for safe planning and preparation of field operations. Second, a structured review and revisions will be made of the department’s safety policies and procedures to ensure clarity and consistency in the context of MoDOT’s BBS culture. Thus far, 65 of 76 policies have been drafted for revision and 55 of 70 risk-based assessments have been drafted. Completion of this specific effort is planned for Summer/Fall 2019.

The desired outcome for this initiative is a safer work environment that reduces incidents, injuries, fatalities and customer claims involving MoDOT activity.

Autonomous Truck-mounted Attenuators and Flagger Vehicles

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGERS:
Chris Redline, District Engineer

PURPOSE OF THE PROJECT:
MoDOT’s commitment to safety applies to members of its work crew as well as the general public. In 2018, 11 people were killed in work zone crashes on state system routes and an additional two on the local system. MoDOT’s ultimate goal is zero fatalities in work zones. Additionally, MoDOT TMA’s have been involved in over 100 incidents since 2015 injuring many MoDOT employees. There must be constant improvement in both the planning and technology we employ in the field. MoDOT is investigating a two prong approach to improve work zone safety for our field professionals.

The first approach is to implement an employee innovation that combines a TMA and an Automated Flagging Assistance Device. This will allow flagging operations to be performed using the protection of a TMA. The purpose of this innovation is to keep MoDOT and contractor flaggers alive and uninjured while performing flagging for traffic control. MoDOT is currently in the procurement process and plans to receive prototype TMA flagger devices from two vendors by mid-November. Once received, they will be individually inspected and evaluated for future purchases.

The second approach is to develop and implement a Driverless TMA to eliminate injuries to MoDOT employees that drive the first TMA truck motorist’s encounter. This is the truck most impacted by motorists. This type of traffic control is used for moving operations such as sweeping and striping. We will eliminate injuries by having an unstaffed TMA truck autonomously follow a lead truck at specified distances. Recently, the system successfully passed Phase 1 testing at the Missouri State Fairgrounds. The units are currently in the Kansas City District awaiting navigation and communication system upgrades before the testing resumes in October.
Use Innovation to Improve Work Zone and System-wide Safety

Deploy a Suite of Demonstrable Impactful Safety Techniques through Data-Driven Safety Analysis

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
Jon Nelson, Assistant to the State Highway Safety and Traffic Engineer

PURPOSE OF THE PROJECT:
While many eligible safety improvements have an influence on reducing fatal and serious injury crashes, using a data-driven approach will allow the department to maximize the benefit of each dollar invested. Nationally, accepted analysis found in the Highway Safety Manual can be utilized to determine the most cost-effective measures for various sections of roadways.

Traditional crash and roadway analysis methods mostly rely on subjective or limited quantitative measures of safety performance. This makes it difficult to estimate safety impacts alongside other criteria when planning projects. Data-driven safety analysis (DDSA) employs a newer approach to identify high-risk roadway and traffic features and execute the most beneficial projects with limited resources to achieve fewer fatal and serious injury crashes.

The data not only helps make better decisions during the project development phase, but also helps inform the public as to what safety benefits they can expect from their investment. DDSA improvements may be identified on a project level basis or on a program level.

DDSA is also used for systemic analysis to identify high-risk roadway features that correlate with particular crash types. Severe crashes are widely dispersed, and their location and frequency fluctuate over time. Systemic analysis identifies locations that are at risk for severe crashes, even if there is not a high crash frequency. Low-cost countermeasures can then be applied systemically across those locations. This approach helps ensure funds are expended in the locations with the greatest risk for severe crashes.

The focus of this measure will be to track how DDSA is utilized in the districts to maximize safety funds. The measure will track the number of fatal and serious injury crashes reduced for every safety dollar invested. The Highway Safety and Traffic Division will help review and prioritize safety projects during the draft Statewide Transportation Improvement Program phase and also help estimate the anticipated impacts on crashes. The data will be updated annually in accordance with the STIP cycle.

Use Innovation to Improve Work Zone and System-wide Safety
This represents the average B/C ratio and predicted reduction in severe and fatal crashes for STIP projects programmed in years 2020-2022. These benefits are calculated over the expected life of the improvements. The department is currently working to have the data driven safety analysis process reviewed by independent traffic consultant experts to assure the analysis is performed using a consistent methodology.

Predictive Analytics to Optimize the Development of Enforcement Operations

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
Alex Wassman, Traffic Management and Operations Engineer

PURPOSE OF THE PROJECT:
There were 208 fatalities in the second quarter of 2019, which is the lowest total for the second quarter among the five years tracked. The new target for 2019 is 801 fatalities. Distracted driving is still a serious concern that MoDOT is addressing with news releases, digital message boards and Buckle Up Phone Down campaign.

Research indicates 94 percent of crashes are the result of poor driver behavior. MoDOT’s Blueprint is a comprehensive strategic plan of diverse countermeasures to help reduce the number of fatalities and serious injuries by discouraging poor driving behaviors or minimizing the consequences of such actions.

One key strategy to achieve this is high-visibility enforcement activities. However, with such a vast highway system and limited resources, it’s impossible to deploy the necessary enforcement in all areas. To help with this, MoDOT has partnered with the Missouri State Highway Patrol to implement a predictive analytics tool to help MSHP strategically direct officers when and where they are needed most. The tool takes into account crash history, weather patterns, traffic volumes and regional events to identify areas most prone to traffic crashes.

As a result, MSHP, and eventually other law enforcement agencies, can use the information to make more informed decisions regarding the time and location of enforcement activities. This tool will provide improved efficiency of resources and, ultimately, fewer traffic crashes. MSHP has completed development of the tool and is beginning implementation of the model in September 2019.
*2019 – Due to the backlog of data, first quarter data were derived from TMS and second quarter fatalities from MSHP radio reports.
*2019 – Due to a backlog of crash reports into STARS, the serious injury measure only includes data derived from TMS. Second quarter 2019 data is unavailable on the MSHP radio reports and is incomplete in TMS.
Predictive Analytics to Optimize Winter Operation Resources

SAFETY CHAMPION:
Mark Shelton, District Engineer

PROJECT MANAGER:
Alex Wassman, Traffic Management and Operations Engineer

PURPOSE OF THE PROJECT:
Costs associated with over or under preparedness of severe weather events aren’t easily captured and are seldomly reported. Simple atmospheric weather forecasts do not tell the whole story and, as a result, MoDOT has sometimes incurred additional costs for storms which never materialized or been caught off guard when storms arrived in advance of expectations.

Road condition prediction is a better gauge for anticipating when conditions warrant treatment and advance traveler information. By partnering with FHWA on the Integrated Modeling for Road Condition Prediction pilot project, MoDOT will be the first DOT in the country to access a simple-to-use, web-based tool that utilizes both historic real-time data to more accurately predict when road conditions are likely to deteriorate. This will enable MoDOT staff to better prepare for adverse road conditions and strategically deploy crews where they are most needed.

This tool will provide the ability to predict conditions up to eight hours in the future and, conversely, enable accurate after-action reviews of MoDOT’s response. This will facilitate improved efficiency of resources and timeliness in response.
Improve Partnerships with Other State Agencies and Leverage Private Sector

Citizen’s Guide to Transportation Funding

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Ben Reeser, Assistant Transportation Planning Director

PURPOSE OF THE PROJECT:
The Citizen’s Guide to Transportation Funding serves as an educational piece for elected officials, stakeholders and the general public to address consistent concerns and misconceptions about transportation funding. The Citizen’s Guide takes the complex issues of the state’s transportation revenue, expenditures, system condition and unfunded needs and explains them in clear and easy-to-understand terms.

In conjunction with the Citizen’s Guide, an online transportation calculator was developed to show Missouri taxpayers how much they’re paying each month in state and federal transportation taxes/fees and where the money is invested.

The Citizen’s Guide can be found online at: www.modot.org/guidetotransportation.

The Financial Snapshot serves as an appendix to the Citizen’s Guide and can be found online at: http://www.modot.org/about/documents/FinancialSnapshot.pdf
New Department Website

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Matt Hiebert, Assistant Communications Director

PURPOSE OF THE PROJECT:
MoDOT’s website had not been significantly upgraded since 2005. This has led to the site falling below current technological standards. As a result, customers using mobile devices have a difficult time navigating the site and employees must often spend unacceptably large amounts of time making simple updates to web pages. A Content Management System was chosen as the best solution to the multiple issues. Other factors necessitating the upgrade include:

- “Contribute” web updating software was no longer supported by manufacturer.
- A CMS is in-line with web technology currently used by federal and state agencies.
- Mobile devices account for more than half of MoDOT’s web traffic. A CMS will make our site “mobile ready” without a stripped down alternative site.
- Updating the website will be much easier for employees. Right now, it can take several minutes to an hour to update a simple webpage.
- A CMS offers ongoing upgrades that could potentially expand functionality for the public
- The effort will be performed in stages. It was estimated that an initial migration of 600 top visited pages by the end of summer 2018 would cover 99 percent of all MoDOT web traffic. Stage 1 is the migration of those top pages.

![Website Migration Graph]

- **Pages Migrated**
- **Goal**

**DESIRABLE TREND**
Better Traveler Information Map

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Matt Hiebert, Assistant Communications Director

PURPOSE OF THE PROJECT:
The Traveler Information Map is MoDOT’s highest-trafficked website. To increase traffic during “off season” quarters and to enhance potential and existing features, the Communications Division will work with other departments to:

- Collect input through a permanent online survey linked from the map. Note: Survey added Jan. 2019.
- Enhance the text report to work better with the newly designed Drupal website.
- To actively promote the map in spring and summer (off seasons) to increase attention to the work zone, traffic and detour features.
- To explore and add technical features which will be described in narrative portion of this measure.

A team lead by the Northeast District has also added features that allow the addition of active links and the ability to name projects in the text reports. This allows district personnel to link to “more info” and associate text in the map with “branded” projects.

**SURVEY CHART UNDER DEVELOPMENT**
**Maintenance Management System**

**SERVICE CHAMPION:**
Eric Schroeter, Assistant Chief Engineer

**PROJECT MANAGER**
Mike Rinehart, Maintenance Liaison Engineer

**PURPOSE OF THE PROJECT:**
With maintenance staff constituting about 54 percent of salaried employment at MoDOT and with about 23 percent of MoDOT’s budget being used to accomplish maintenance related tasks, it makes sense to look at the challenges that staff has in recording and finding data related to what gets accomplished by this important organizational division. Multiple software programs, difficulty in documenting work and challenges in finding maintenance-related information is substantial.

MoDOT intends to create a Maintenance Management System that will be a simple to use, web-based program for capturing and easily reporting data related to what gets accomplished in maintenance. The size and scope of the project has prompted a phased approach to get a significant portion of the project completed under Phase 1.

The MMS Phase 1 project is currently under development with implementation scheduled for the pilot locations sometime in late 2019. Full roll-out scheduling of Phase 1 will be identified by districts.
Design-Build, Design-Build Finance, and/or Operations and Maintenance Options

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Kenny Voss, Assistant State Design Engineer

PURPOSE OF THE PROJECT:
Design-build is a project delivery method in which the design and construction services are contracted by a single design-build contractor. This provides a single point of responsibility in the contract to reduce risks and overall costs to the state.

MoDOT has delivered more than $1.7 billion in Design-build projects that have saved taxpayers over $277 million. When combined, these projects were completed more than 74 months ahead of schedule. MoDOT partners with the public and private sectors to deliver projects that maximize available resources into collaborative solutions that achieve goals. This effort challenges the way projects are delivered with innovation, speed and efficiency as driving forces. MoDOT pushes the boundaries to execute projects using innovative data-driven processes and a wide range of partnerships.

MoDOT evaluates project risks such as size (cost), type (preservation, rehabilitation or reconstruction) and complexity (opportunity for innovation and speed) when determining project delivery methods. The advantages of MoDOT’s innovative contracting methods are as follows:

- DB contracts include design and construction under one contract, procured using a two-phased selection process. MoDOT scores proposals using a best-value or “build-to-budget” selection.
- Cost-plus-time bidding (A+B) aims to expedite project completion through competitive bidding on construction time (days).
- Alternate Technical Concepts give the contractor the opportunity to provide a more cost-effective alternative design prior to the bid. ATC discussions are held in a confidential environment which maximizes competitive bidding. The low bid is awarded the contract.

During this reporting period, one Design-build project was awarded in the Southwest District. The I-44 Bridge Rebuild project will repair 19 critical bridge assets on I-44 between Springfield and Joplin while improving safety on the corridor as well as maintaining traffic during construction.

Based on the 2019 STIP, MoDOT delivered three out of 434 projects statewide using innovative contracting methods. One was delivered using Design-build and two were delivered using the A+B process. The DB project accounted for $31.1 million and the two A+B projects accounted for $18.3 million of the $758.6 million programmed budget (6.5 percent). The target of two projects per year was met, but the percentage of programmed STIP dollars awarded was below the 10 percent target. MoDOT will continue to look for opportunities to further develop the innovative project delivery program as part of the FOCUS strategic initiative.

2018 TARGET: 10%
Value Engineering

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Kenny Voss, Assistant State Design Engineer

PURPOSE OF THE PROJECT:
The goal of value engineering is to build the right project at the right time, meeting the project need with the appropriate project scope. MoDOT uses the VE program to ensure the public receives great value for every tax dollar invested in Missouri’s transportation system. MoDOT has been increasingly focused on smaller, maintenance-type projects that are not traditionally targeted by the VE program. Still, MoDOT must be innovative in using the VE process to search for solutions to reduce project costs and provide additional value.

MoDOT uses design-phase value analysis to remove unnecessary scope, reduce project costs and improve project flexibility. For fiscal year 2019, 42 percent of applicable projects underwent some form of value analysis during design, which is currently above the 26 percent target for design-phase value analyses. Value engineering is an important strategic FOCUS initiative and MoDOT is committed to adding value and identifying savings in every project possible.

MoDOT partners with industry to find more cost-effective solutions during the construction phase. Value Engineering Change Proposals (VECP) engages contractor ideas to deliver improved projects. The number of approved VECPs dropped from 85 in FY 2010 to 31 in FY 2017. During this period, MoDOT savings dropped from $8.97 million to $740,000. Key impediments to VECP approvals are owner resistance, time for approval, lack of leadership support and at-risk costs to VECP development. To reverse this trend and counter these impediments, MoDOT partnered with CMT to pilot the Post-Award Value Engineering (PAVE) program initiative. Six projects were selected for the pilot resulting in 16 approved VECP’s, totaling $1.225 million in net approved cost savings. Based on the success of the pilot, MoDOT has decided to implement the PAVE process as a statewide program. This initiative has been submitted for institutionalization into MoDOT policy with an anticipated effective date of July 2019.

For FY 2019, 23 VECPs were approved resulting in a MoDOT savings of $1.35 million. This represents a 92 percent approval rate. Three PAVE workshops have been held in two districts this fiscal year.

DESIRED TREND
Fleet Optimization

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Amy Niederhelm, Central Office General Services Manager

PURPOSE OF THE PROJECT:
MoDOT must keep a dependable fleet to meet customer’s needs. The fleet age is the best indication of fleet condition. The large investment in fleet, with a replacement value over $475 million, emphasizes the importance. MoDOT is moving toward an asset management approach for fleet using data to plan fleet purchases over the next several years.

In FY 2019, the average age for Light Duty fleet, Dump Truck fleet and Other fleet (includes equipment such as backhoes, loaders, tractors and specialty items like under bridge inspection units and stripers) shows gradual decreases. This is attributed to purchasing equipment based on the asset management approach. The goal is for the average age to be half the department’s age threshold.
Facilities Optimization

SERVICE CHAMPION:
Eric Schroeter, Assistant Chief Engineer

PROJECT MANAGER:
Levi Woods, Central Office General Services Manager

PURPOSE OF THE PROJECT:
Facilities Optimization provides a similar asset management process for MoDOT facilities as is used by the Department for roadways. Like the Statewide Transportation Improvement Program, MoDOT facilities assets are placed into a rolling five-year budget based on needs. Facilities are currently funded at $7.2 million annually for Capital Improvement and Asset Management purposes. The charts depict MoDOT’s progress toward meeting our goal of having facilities that meet minimum needs and the systems maintained which keep the facility operational.

Facilities staff utilizes Vanderweil Facility Advisor, a computer-based program, to inventory, with age and condition of all buildings and improvements. Individual systems within the building are inventoried, with all units having a specified lifecycle. Based on actual annual inspections, the asset’s lifecycle is determined to be either due for early replacement, replace at end of calculated life, or the lifecycle can be extended based on actual observed conditions. These options allow MoDOT the flexibility to optimize and maximize the useful life of each asset.

Facilities Asset Management and the Long Term Facilities Plan are currently funded at $7.2 million annually. In 2014, the Long Term Facilities Planning Team recognized in order to operate, facilities have many necessities including space for mechanics to work inside during inclement weather, adequate restrooms for employees, sufficient meeting space for muster sessions and cold storage for operational supplies and equipment. Due to ever changing conditions at MoDOT facilities, the Long Term Facilities Planning Team reviews the needs and allocation of funds for each program on an annual basis. Funds are then allocated to the Capital Asset Preservation Plan (CAPP or Asset Management) and the Long Term Facilities Plan (Capital Improvement Plan- CIP). The $7.2 million budget is allocated based on needs with $6.85 million allocated to the CAPP and CIP Plans, with the remaining funds available for asset management of weigh scales, rest area/welcome centers, and design consultants.
Fleet and Facilities Optimization
Strategy Implementation

Note: Budget of $3 million annually over 10 year period.

Employee Engagement and Cost of Turnover

STABILITY CHAMPION:
Lester Woods, Chief Administrative Officer

PROJECT MANAGER:
Paul Imhoff, Special Projects Coordinator

PURPOSE OF THE PROJECT:
Employee turnover not only has a direct impact on MoDOT’s ability to preserve and operate a reliable transportation system, but also is a reflection of the level of employee engagement within MoDOT. Increasing employee engagement and reducing turnover and its subsequent costs are prudent goals toward organizational stability and a wise use of taxpayer dollars.

For fiscal year 2019, MoDOT turned over 679 employees. Applying a Society for Human Resources Management turnover cost calculator to these estimates finds the hard cost of backfilling positions to be $2.1 million for FY 2019. For the same period, the soft cost of turnover is estimated to be $32.58 million. The FY 2019 total turnover cost of $34.68 million is a 12.9 percent increase over FY 2018.

Efforts to improve the stability of MoDOT by increasing employee engagement are underway.

- **Pay Plan:** For fiscal year 2020, the Legislature has approved a pay plan that would effectively complete the first three years of the MoDOT pay strategy by providing a 1.1 percent cost of living increase, plus a two-step increase for salaried employees on steps 1-8 of their salary range, and a one-step increase for employees on step 9-17 of their range. Every salaried employee will receive at least a 3 percent increase.

- **Training and Certifications:**
  - **Performance Development:** Performance development is about helping each individual person at MoDOT perform their best each day by having more regular conversations with their supervisor. The approach is a combination of performance management and employee development and focuses on three core principles: establishing expectations, regularly coaching and creating accountability.
  
  - Two principle trainings are being offered to fully implement Performance Development: *Performance Development for Supervisors* and *Situational Leadership*.

- **Performance Development for Supervisors** is a mandatory training that all current and new supervisors are required to attend. The training was first made available to all current supervisors in June 2018. All new supervisors will attend the training as part of MoDOT’s Core Workforce Values Training for Supervisors.
• **Situational Leadership** is an e-learning training in MoDOT U and is offered to those in a supervisory role. It was first made available in August 2018. It is an optional training for individuals in a supervisory role prior to Sept. 1, 2018. All supervisors hired or promoted into a supervisory role for the first time after Sept. 1, 2018 are required to go through the training as a part of MoDOT’s Core Workforce Values Training for Supervisors. The benchmark for this training is provided by the Center for Leadership Studies and represents the usage rate organizations typically see in the first year the training is offered.

  o **Registered Apprenticeship Program**: The registered apprenticeship program is officially open for enrollment. The current emphasis is on helping people get enrolled in both the Department of Labor and Veteran’s Affairs programs. Also, a focused effort is underway to partner with the Department of Economic Development’s Workforce Development Division to enhance MoDOT’s recruitment efforts and develop partnerships with Missouri colleges and universities to grant college credit for employees who complete registered apprenticeships with MoDOT.

• **Leadership Coins**: The *Leadership in Action* recognition coin passing program has been in effect since September 2017. The purpose of the program is for coin holders to look for leaders within MoDOT who are actively demonstrating MoDOT’s Values and/or moving MoDOT forward in the areas of Safety, Service or Stability. Each coin will be passed ten times and will be subsequently retired. There are currently 168 coins in circulation that have been presented 509 times. Three coins have been retired.

• **Succession Planning**: Substantive changes have been made to the executive level organizational structure with the addition of the Chief Administrative Officer and Chief Safety and Operations Officer roles. Additionally, position have been added to staff an Assistant to the Chief Administrative Officer – Employee Health and Wellness, and an Assistant to the Chief Safety and Operations Officer – Safety and Emergency Management.

• **Evaluate Job Descriptions**: This is the next phase of the Succession Planning process.

2019 TARGET: 1,000 Presented

In Circulation: 1,000
Started: 1,000
Presented: 1,000
Cross-Cabinet Collaboration

STABILITY CHAMPION:
Lester Woods, Chief Administrative Officer

PROJECT MANAGER:
Liz Prestwood, Policy/Innovation Program Manager

PURPOSE OF THE PROJECT:
The current Missouri vehicle registration fee is based on taxable horsepower, an archaic measure which bears no correlation with vehicle power, vehicle weight, or impact caused on infrastructure. Missouri is the only state using taxable horsepower to assess vehicle registration fees.

Missouri has been the recipient of three consecutive Surface Transportation System Funding Alternative (STSFA) federal grants totaling $4,805,000. The first award was to perform pre-deployment activities for concept feasibility in the amount of $250,000. Phase two award provided $2,772,500 and is being used to determine existing system capabilities for implementation and further investigates the impacts to Missouri residents through a Highway Cost Allocation and Revenue Attribution Study (HCARAS) and Rural Urban Transportation Funding Analysis. In 2019 MoDOT received a third STSFA award in the amount of $1,782,500 for the design and implementation of an MPG based registration fee.

The initial work and deliverables from the Department's STSFA activities modeled how an MPG-based fee could be used to supplement and or replace the current registration fee schedule. The project team began work with Missouri Department of Revenue (DOR) in 2018 to explore existing system capabilities to collect this type of fee and identify gaps. This DOR-led study concluded in January 2019. The consultant presented five options of varying cost to implement an MPG-based fee structure. This cross-cabinet effort is ongoing and the preferred implementation option has not been selected. Legislation has been filed in the 2019 Missouri General Assembly to support this MPG-based registration fee.

Two additional studies are underway to fully understand impacts of an MPG based registration fee. A revenue study will determine the typical impacts (per year, per mile, per driver etc.) of highway use and will provide a quantitative basis for the fees attributed to non-gasoline and non-diesel vehicles. The second study currently underway will analyze fees paid by rural and urban drivers under the proposed MPG-based registration fee system, considering the commuting behaviors and vehicle characteristics of highway users statewide.

The principal project goals are to generate revenue consistent with technological trends in the motor vehicle market and to ensure privacy and security for Missouri drivers while utilizing current adaptable technologies to collect and administer the fee.
Leverage Innovations to Reduce Costs and Improve Service Quality

Innovations Challenge Submissions and Best Practices

STABILITY CHAMPION:
Lester Woods, Chief Administrative Officer

PROJECT MANAGER:
Kelly Backues, Transportation Planning Specialist

PURPOSE OF THE PROJECT:
Preserving and operating a reliable transportation system takes an engaged workforce. MoDOT’s Innovations Challenge program provides employees opportunity and recognition for their efforts to leverage innovations so the department may reduce costs and improve service quality.

There were 147 submissions for this year’s Innovations Challenge, which is 84 percent of the annual target of 176. The annual submission total represents an 11 percent decrease from last year. Submissions were lower in four of the eight competing areas. The St. Louis District had the largest increase (142 percent) and the Kansas City District had the largest decrease (52 percent). The 2018 target for approved best practices has been set at 57. Ninety-four percent of the 52 showcase participants were chosen as a best practice in 2018 which is only one percent below the 95 percent target.

Transportation Planning staff is working with location coordinators and regional managers to implement strategies to increase participation. The pre-showcase evaluation process continues to be expanded to ensure all affected areas of the department have input, which should result in higher quality innovations at the showcase. A new online virtual showcase is being promoted to employees to generate more interest in the program.

Local Entity Cash Leveraged for Cost Share Program

STABILITY CHAMPION:
Lester Woods, Chief Administrative Officer

PROJECT MANAGER:
Todd Grosvenor, Assistant Financial Services Director

PURPOSE OF THE PROJECT:
The Cost Share Program builds partnerships with local entities to pool efforts and resources to deliver state highway and bridge projects. When local entities are willing to partner with MoDOT, MoDOT matches their investment up to 50 percent of the project cost. MoDOT works in cooperation with the Department of Economic Development with local entities to determine when targeted investments can be made to create jobs and may provide up to 100 percent of the project cost.

On Jan. 8, 2014, the Missouri Highways and Transportation Commission suspended the Cost Share Program due to declining transportation funding.

On Jan. 4, 2017, the Missouri Highways and Transportation Commission reactivated the Cost Share Program for FY 2018. As of the first quarter of FY 2019, Cost Share Program funds totaling $9.1 million were approved for six projects. For every $1 of Cost Share Program funds, local entities provided $1.59 of cash, which is $0.59 above the target.
