SPECIAL HARDENED MAINTAINER BLADES MGS-03-03A

1.0 Description. This specification covers maintainer blades fabricated from plate steel meeting the requirements and dimensions specified herein.

2.0 Materials.

2.1 Chemical Composition. Material shall be steel of AISI 1074 quality. When sampled and tested in accordance with the designated methods set forth in ASTM E 30 and/or TM 57, the following chemical requirements shall apply.

<table>
<thead>
<tr>
<th>Material</th>
<th>Min.</th>
<th>Max.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Carbon, Percent (Direct Combustion Method)</td>
<td>0.70</td>
<td>0.80</td>
</tr>
<tr>
<td>Manganese, Percent (Bismuthate Method)</td>
<td>0.50</td>
<td>0.80</td>
</tr>
<tr>
<td>Phosphorus, Percent (Alkalimetric Method)</td>
<td>----</td>
<td>0.04</td>
</tr>
<tr>
<td>Sulfur, Percent (Evolution Method)</td>
<td>----</td>
<td>0.05</td>
</tr>
</tbody>
</table>

2.2 Physical Requirements.

2.2.1 Hardness, AASHTO T80 (ASTM E18). The 7/8 inch wearing edge shall be selectively hardened front and back with a primary and secondary hardness. The primary hardness area shall have a Rockwell C hardness of 62 (± 5) for a depth of 1/8 inch at the high point of the hardness pattern. The secondary hardness area shall have a Rockwell C Hardness of 45 to 56 with a minimum depth of 1/32 inch at the high point of the hardness pattern.

2.2.2 Punching. The blades are to be punched in accordance with the detailed drawings which are attached and made a part of these specifications.

2.2.2.1 Moldboards are punched with holes 1/8 inch larger than the blade bolts. Accordingly, blade punching will be of such accuracy, both for the spacing between the holes and for the spacing between the end hole and the end of the blade, that the blades will fit the moldboards, thus making the blade sections interchangeable.

2.2.3 Dimensions. Maintainer blades are to be curved, top edge beveled to fit the moldboard with a thickened wearing edge, lower and both ends square. The following dimensions and tolerances shall apply.

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Width</td>
<td>8 inches ± 1/8 inch</td>
</tr>
<tr>
<td>Length</td>
<td>as requisitioned with tolerance of ± 1/8 inch</td>
</tr>
<tr>
<td>Thickness</td>
<td>5/8 inch ± 1/16 inch on the moldboard edge.</td>
</tr>
<tr>
<td></td>
<td>7/8 inch ± 1/16 inch on the wearing edge.*</td>
</tr>
</tbody>
</table>

* Note – The 7/8 inch wearing edge shall start at 5/8 inch ± 1/8 inch above the bottom edge of the blade and shall be a minimum of 3 and 1/2 inches in width over the length of the blade. The upper part of the wearing edge shall terminate below the position of the bottom edge of a standard moldboard.

2.2.3.2 The blades are to have hole spacings and dimensions in accordance with the standard cutting edge punchings as shown on the attached drawings.

2.2.3.1 The finished blades shall not be twisted and shall be free from flaws and injurious defects and shall have good workmanlike finish. Longitudinal warp is allowed but shall not deviate more than 1/8 inch per foot of blade length and shall be uniformly
distributed over the length of the blade. For a 6 foot long blade a 3/4 inch warp would be allowed. The cutting edge that rests upon the pavement shall be straight and true. The longitudinal warp and the alignment of the cutting edge shall be measured by extending a straight edge from one end of the blade to the other measuring from the straight edge to the blade at the mid-point of length.

2.2.4 **Weight.** Maintainer blades shall have a weight per linear foot of 19.9 pounds with a 5 percent minus tolerance. To determine the weight per linear foot not less than ten or more than twenty blades of identical sizes may be selected at random from a shipment and weighed on accurate scales.

2.2.5 Any paint used to coat the blades shall be dry prior to shipment and shall not smear or track during handling. Each blade shall have a legibly identifying mark indicating it as a special flame hardened type blade.

3.0 **Certification and Acceptance.**

3.1 Prior to approval and use of any material delivered, the manufacturer shall submit to the State Materials Engineer, P. O. Box 270, Jefferson City, Missouri 65102, a certification in triplicate certifying the blades supplied conform to all requirements of these specifications.

3.1.1 The "Certification Statement" form shown in Section 4.0 is to be used when certifying. The certification shall include or have attached specific results of tests performed on the blades for chemical composition, hardness and weight per linear foot. The certification shall show the purchase order number, destination, quantity of material represented at each destination and shipping date.

3.2 Acceptance of the blades shall be based on the manufacturer's certification and upon results of such tests as may be performed on samples of the material. When samples are taken, one complete blade of each length shall be taken to represent the shipment. A shipment will be considered as all blades represented on one certification and shipped on one date, regardless of various destinations. If a blade fails to meet any of the specified requirements, two additional blades will be selected for retest from the same quantity represented by that certification. Both of these retest samples must meet all requirements or the entire quantity will be rejected.

3.3 If the blades are rejected, no payment will be made and the cost of blades destroyed during sampling and testing shall be borne by the supplier.

4.0 **Certification Statement.** The following form is to be completed, signed, and submitted in triplicate for each shipment, at the same time as blades are shipped. A shipment is defined as all blades represented on one certification and shipped on one date, regardless of various destinations.
CERTIFICATION STATEMENT
SPECIAL HARDENED MAINTAINER AND LOADER BLADES

State Materials Engineer
P. O. Box 270
Jefferson City, Missouri 65102

Dear Sir:

We hereby certify that the maintainer and loader blades described below comply with all requirements of Specification MGS-03-03A and in accordance with Bid Request No. ________.

The following blades manufactured by ____________________are covered by this certification.

<table>
<thead>
<tr>
<th>Purchase Order No.</th>
<th>Destination</th>
<th>Quantity &amp; Size</th>
<th>Shipping Date</th>
</tr>

Title: ___________________________________
Date:_____________________________________

Results of tests may be shown on attachments rather than on this form, if preferred.

This form is to be completed, signed, and submitted in triplicate for each shipment, at the same time as blades are shipped. A shipment is defined as all blades represented on one certification and shipped on one date, regardless of various destinations.
MISSOURI DEPARTMENT OF TRANSPORTATION
STANDARD CUTTING EDGE PUNCHINGS FOR MAINTAINER BLADES

S.H.5
3" 3" 4 Spaces – 1’0” c’s = 4’0”
5"0’’ ± 1/8’’

1 3/8” to 1 ¼” for ½” thickness

S.H.6
3" 3" 5 Spaces – 1’0” c’s = 5’0”
6’ 0’’ ± 1/8’’

Same as shown for 5’0” above

S.H.7
3" 3" 6 Spaces – 1’0” c’s = 6’0”
7’0’’ ± 1/8’’

Same as shown For 5’0” above

S.H.8
3" 3" 7 Spaces – 1’0” c’s = 7’0”
8’0’’ ± 1/8’’

Same as shown For 5’0” above

S.H.10
3" 3" 9 spaces – 1’0” c’s = 9’0”
10’0’’ ± 1/8’’

Same as shown for 5’0” above

Blades of odd 66”lengths to be punched similar to above except that the 12” spaces nearest the ends of blade becomes 9” spaces.
i.e., 5’6” blade hole spacing is 3”-3”9”-12”-12”-9”-3”-3”.
For blades over 10’0” length use two shorter lengths.
