FY 2021
Missouri Department of Transportation
Highway Safety Plan
Highway Safety Plan

As a component of this Highway Safety Plan, the State of Missouri is also applying for the following National priority safety program incentive grants:

405(b) Occupant Protection
405(c) State Traffic Safety Information System Improvements
405(f) Motorcyclist Safety Grants
405(d) Impaired Driving Countermeasures

Introduction & Background

In 2003, Missouri participated with the American Association of State Highway Transportation Officials (AASHTO) in a national effort to reduce the preventable tragedies associated with traffic crashes. Utilizing a partnership approach, the state’s first Strategic Highway Safety Plan (SHSP), Missouri’s Blueprint for Safer Roadways, was developed to help reduce fatal and serious injuries on Missouri’s roads. The main idea of the SHSP approach is that a comprehensive effort across multiple disciplines will be required in order to significantly reduce the number of fatal crashes experienced in the state. The goal established in the Blueprint was to achieve 1,000 or fewer fatalities by 2008. That goal was reached one year early, with a year-end fatality total for 2007 of 992.

Since then, the state has continued using the SHSP approach to keep moving Missouri toward zero deaths. The second SHSP, Missouri’s Blueprint to ARRIVE ALIVE, was unveiled at the semi-annual Blueprint Conference in October 2008, and the third and fourth iterations of the plan were released in 2012 and 2016, respectively. The current plan, Missouri’s Blueprint – A Partnership Toward Zero Deaths, is set to expire at the end of 2020. In preparation of this, the state is currently developing the 5th SHSP titled Show-Me Zero – Driving Missouri Toward Safer Roads. The new plan will serve as the state’s strategic approach to eliminating fatalities for the years 2021-2025. The new plan will be released in September 2020 with the goal of seeing Missouri make significant progress in cutting fatalities in half over the next 5 years. This is part of an overall vision to see Missouri achieve zero fatalities by 2030. The emphasis areas identified in the SHSP help determine which areas to focus on when developing the annual Highway Safety Plan.

Highway safety planning process

Data Sources and Processes

Data is the cornerstone of this plan and is essential for diagnosing crash problems and monitoring efforts to solve traffic safety problems. We must identify the demographics of the roadway users involved in crashes, what behaviors or actions led to their crashes, and the conditions under which the crashes occurred. Data collection and analysis is dynamic throughout the year.

When data is effectively used to identify repeating patterns in the dynamic interaction of people, vehicles, traffic, and other conditions, there is increased potential for successful mitigation. From this
comes a reduction in the number and severity of crashes, ultimately resulting in fewer fatalities and serious injuries.

Problem identification, performance goals and strategies are derived by utilization of the Fatality Analysis Reporting System (FARS), the Missouri Statewide Traffic Accident Records System (STARS), Vehicle Miles Traveled (VMT) and observational occupant protection surveys, among others listed below.

**Fatality Analysis Reporting System (FARS)**

The State of Missouri utilizes the core performance measures outlined in “Traffic Safety Performance Measures for State and Federal Agencies” (DOT HS 811 025) as developed by NHTSA and GHSA. The FARS database provides ten of the twelve performance measures. These performance measures are not only used to address problem areas, but to gauge recent success or need for improvement at the statewide level.

**Statewide Traffic Accident Records System (STARS)**

The source of statewide analytical data is the Missouri Statewide Traffic Accident Records System (STARS) managed by the Missouri State Highway Patrol. All Missouri law enforcement agencies are required by law (RSMO 43.250) to submit a Missouri Uniform Traffic Crash Report (MUCR) to STARS if a traffic crash involves a death, a personal injury, total property damage to an apparent extent of five hundred dollars or more to one person, or other written MUCR's as a result of an investigation. It should be noted that although reports that did not occur on public roadways are maintained in STARS, these crashes are not included in statistical analyses provided. Crashes involving less than five hundred dollars to one person may be included if they were reported to STARS. Please note: Crash data referenced in this plan was current as of April 2020.

**Vehicle Miles Traveled (VMT)**

MoDOT maintains vehicle miles traveled charts, graphs and counts for all state-maintained roadways in the state. This information serves the Highway Safety Office (HSO) in developing problem identification, identifying resources and allocating funding.

**Engineering Data**

MoDOT connects the crash statistics from STARS to their Transportation Management System (TMS). Information relating to roadway features, such as speed limit, lane widths, presence of rumble strips, etc.; are stored in TMS. By joining these two data sources, MoDOT is able to perform a comprehensive safety review of the transportation system and strategically implement safety countermeasures.

**Observational Occupant Protection Surveys**

The State of Missouri, with the assistance of the Missouri Safety Center, conducts an annual Statewide Seat Belt Observational Survey. The survey sites were re-selected in 2018 per rule 1340.12(a) Re-selection of Observation Sites. The 2020 survey will follow the same guidelines of the 2018 survey, and is scheduled for June 1-14, 2020.
The HSO also conducts a statewide Teen Observational Survey every other year in areas where teen drivers are present such as school parking lots. The teen survey is conducted at 150 locations throughout Missouri. *This survey was originally scheduled for FY20, however, due to the COVID-19 pandemic and the closure of schools during the survey time period, the survey has been rescheduled for early FY21.

**Court Data**

Court data, gathered from the Office of State Courts Administrator includes DWI filings, diversions, dismissals and convictions. This information is available to the municipal and circuit courts and is used in support of the impaired driving problem identification regarding DWI convictions.

**Department of Revenue**

Information gathered from the Department of Revenue (DOR) includes data elements important to the HSO Young Driver Program and Older Driver Program such as driver’s license by age and gender. This information helps the HSO to identify target age groups when evaluating program objectives.

**Biennial Survey of State Automated Traffic Enforcement Systems**

Beginning in federal fiscal year 2018, the HSO conducted the first biennial survey of all automated traffic enforcement systems used on any public road in the State. The FY 2018 survey was submitted to the Regional NHTSA office on February 26, 2018. The survey follows the guidelines set forth in 23 CFR Part 1300.13. The HSO conducted the second survey in federal fiscal year 2020 and a report was provided to the Regional NHTSA office.

**Partnerships**

No Highway Safety Office can successfully function without communication, cooperation and coordination with our safety partners. This partnership approach allows us to expand our resources, generate diverse ideas, and incorporate new concepts and projects into our Highway Safety Plan. The myriad of our safety partners includes, but is not limited to:

- American Association of Retired Persons
- Cape Girardeau Safe Communities Program
- City/County Engineers
- County Health Departments
- Council for Drug Free Youth
- Emergency Nurses Association
- Federal Highway Administration
- Federal Motor Carrier Safety Administration
- Institutions of Higher Education
- Law Enf. Traffic Safety Advisory Council
- Law Enforcement Training Academies
- Local Law Enforcement Agencies
- Local Technical Assistance Program
- Manuf. Alliance for Child Passenger Safety
- Mercy Hospital
- NHTSA - Region 7
- Metropolitan Planning Organizations
- Missouri Partners in Prevention
- MO Association of Insurance Agents
- MO Automobile Dealers Association
- MO Coalitions for Roadway Safety
- MO Dept. of Health & Senior Services
- MO Dept. of Ele. And Secondary Ed.
- MO Department of Mental Health
- MO Department of Public Safety
- MO Department of Revenue
- MO Division of Behavioral Health
- MO Dept. of Labor and Industrial Relations
- MO Division of Alcohol and Tobacco
- MO Head Injury Advisory Council
Description of Highway Safety Problems

Problem Identification

Most motor vehicle crashes have multiple causes. Experts and studies have identified three categories of factors that contribute to crashes – human, roadway environment, and vehicle factors. Human factors involve the driver's actions (speeding and violating traffic laws, etc.) or condition (effects of alcohol or drugs, inattention, decision errors, age, etc.). Roadway environment factors include the design of the roadway and roadway conditions. Vehicle factors include any failures in the vehicle or its design. Human factors are generally seen as the most critical reason for crashes at 94 percent, followed by roadway environment at 2 percent, and finally the vehicle at 2 percent (Traffic Safety Facts, DOT HS 812 115, Critical Reasons for Crashes Investigated in the National Motor Vehicle Crash Causation Survey, February 2015).

Research has shown that the number of crashes at a particular site can vary widely from year to year, even if there are no changes in traffic or in the layout of the road. Since a single year's data is subject to considerable statistical variation; five years is generally regarded as a practical minimum period for which a reliable annual average crash rate can be calculated. The FY 2021 Highway Safety Plan references crash statistics for 2014 through 2018.

In the 5-year period 2014-2018, a total of 4,436 people died on Missouri’s roadways while another 23,576 suffered serious injuries. A fatality is recorded when a victim dies within 30 days of the crash date from injuries sustained in the crash. A serious injury is recorded when any injury other than a fatality which results in one or more of the following:

- Severe laceration resulting in exposure of underlying tissues/muscle/organs or resulting in significant loss of blood
- Broken or distorted extremity (arm or leg)
- Crush injuries
- Suspected skull, chest or abdominal injury other than bruises or minor lacerations
- Significant burns (second and third degree burns over 10% or more of the body)
- Unconsciousness when taken from the crash scene
- Paralysis
While we recognize that many crashes result simply in property damage, only fatal and serious injury crashes have been targeted because they are more costly in human suffering, social and economic terms.

Preliminary state data shows there were 880 fatalities for 2019 and 4,449 serious injuries.

The 2021 overall fatality goal was calculated using a 5.2% annual reduction in Missouri’s fatalities resulting in a five-year average target of 871.6 fatalities by December 31, 2021. The 5.2% reduction in fatalities corresponds with a long-term goal to achieve 0 fatalities by the end of 2030. Note - The 0 by 2030 goal is not based on a linear reduction (i.e., it’s not a 5.2% reduction every year). Instead, it assumes smaller reductions in the early years followed by larger reductions toward the end of the decade when more vehicle technologies are expected to be present among the state’s vehicle fleet. This could be technologies that are widely available today (adapted cruise control, lane assist keeping, emergency braking, etc.) or newer technologies that are rare or unavailable in 2020.

The 2021 serious injury goal was calculated using a 4.8% annual reduction in Missouri’s serious injuries resulting in a five-year average target of 4,463.9 serious injuries by December 31, 2021. The 4.8% reduction in serious injuries corresponds with a long-term goal to achieve 0 serious injuries by the end of 2040.

A trend line based on the 2014-2018 five-year average was also applied to show the data trends for each category.

Fatality reduction goals were also calculated for the following crash types:

- Aggressive driving-related fatalities
- Speed-related fatalities
- Fatalities involving drivers with a .08 BAC or greater
- Unrestrained passenger vehicle occupant fatalities
- Drivers 15-20 Involved in Fatal Crashes
- Fatalities involving drivers age 65 and older
- Motorcyclist fatalities
- Un-helmeted motorcyclist fatalities
- Fatalities involving motorcycle operators who are not licensed or improperly licensed
- Fatalities resulting from crashes involving school buses or school bus signals
- Pedestrian fatalities
- Bicyclist fatalities

**Urban versus Rural Crash Experience**

Traffic crashes are not evenly distributed on Missouri roadways. As expected, crashes occur in large numbers in the densely populated urban areas (population of 5,000 or more) of the state. Of the 23,194 fatal and serious injury crashes in 2014-2018, 54% occurred in an urban community while 46% occurred in a rural area. The rural areas of the state take on greater significance when examining only fatal traffic crashes. In 2014-2018 fatal traffic crashes, 44.4% occurred in an urban area of the state while 55.6% occurred in a rural area.

The following two maps depict the high fatality and serious injury locations and the urban (population of 5,000-49,999) and Urbanized (population of 50,000 or greater) for comparison to where crashes are occurring.
The Highway Safety Office hosts grant application workshops each year for potential applicants. These workshops are held in five strategic regional locations (Cape Girardeau, Chesterfield, Jefferson City, Springfield, and Lee’s Summit) so it is more convenient for potential applicants to attend. They are usually scheduled during January.
Workshop participants are provided a packet explaining the highway safety grant program, the types of projects eligible for award, and an overview of statewide statistical traffic crash data. Potential applicants are given instruction on how to retrieve traffic crash data for analysis through the Missouri State Highway Patrol’s web site.

The purpose of the highway safety program and the statewide goal are discussed to help the potential applicants understand how their efforts are imperative in order to impact the fatality reduction goal. Program areas are identified and the Highway Safety Grant Management System (GMS) and on-line reporting systems are reviewed. These seminars are used as an opportunity to share any new contract conditions, application process changes, or legislative changes that may impact the grant programs. The grant application deadline for the 2021 fiscal year was March 1, 2020.

**Grant Selection Process**

The Highway Safety program staff reviews the applications relative to their specific areas of expertise. During this preliminary review, they assess the applications to determine their relevancy toward meeting the highway safety goals. Applicants are contacted if clarification is needed. In essence, a case is prepared to support whether the application should be funded in full, in part, or denied.

Fatal and serious injury crash rankings are performed for all cities, counties, and the unincorporated areas in the state. These rankings are conducted for the problem areas of alcohol, speed, young drinking drivers, distracted, unbelted, under 21 years of age and older drivers. These rankings are also used in determining the overall severity of the problem for each respective location. Fatal and serious injury county, city, and unincorporated county rank orders are located in the *Crashes by City, County & Unincorporated County* section of this report.

Law enforcement applications are assessed to determine their rankings by the type of project they are choosing to conduct. While agencies with the highest-ranking crash data are given priority because of the potential impact of their project, other considerations are taken into account. For instance, a lower-ranking city may be awarded a project because the county in which they reside ranks high or they may fall within a high-crash corridor. Some communities are awarded a project in order to participate in the national mobilizations while others are given consideration because the Highway Safety Office has determined a need exists to garner traffic safety minded agencies within a particular geographic location. An additional consideration may be their participation in multi-jurisdictional law enforcement task forces.

**Risk Assessment**

An internal team of highway safety program staff review all grant applications which includes conducting a risk assessment. Several days are set aside to review the applications and hear both supporting arguments and issues of concern. The reviewers take many factors into consideration when assessing these applications:

- Does the project fall within the national priority program areas?
- Does the project address the key emphasis areas identified within the strategic highway safety plan and does it have the ability to impact traffic crash fatalities and serious injuries?
- Does the problem identification sufficiently document problem locations, crash statistics, targeted populations, demonstrated need, and the impact this project would have on traffic safety problems in their community?
- Have “best practices” countermeasures been proposed in order to make a positive impact on the identified problem?
• Will this project provide continuity of effort in a particular geographic region or in a particular program area?
• Will the activity serve as a “foundational project” that satisfies criteria for additional federal funding (e.g., safety belt observational survey)?
• Does the project alleviate, eliminate or correct a problem that was identified in a federally conducted assessment of a highway safety priority program area?
• Are innovative countermeasures proposed and, if so, is there an effective evaluation component included?
• Are any local in-kind resources proposed to match the federal grant efforts?
• Does the applicant propose developing partnerships (e.g., working with service organizations, health agencies, and/or insurance companies; conducting multi-jurisdiction enforcement efforts) in order to expand their resources and enhance their outcomes?
• Is the local government or administration supportive of this proposed activity?
• If equipment is requested, will the equipment support a project or enforcement activity; does the agency have the ability to provide a local match for part of the equipment purchase?
• Is there sufficient funding in the budget to support all or part of this application?
• Has the applicant’s risk of noncompliance with Federal statutes, regulations, and the terms and conditions of the sub-award been considered for such factors as:
  o The applicants prior experience with the same or similar sub-awards;
  o The results of previous audits including whether or not the applicant receives a Single Audit in accordance with Subpart F-Audit Requirements of this part, and the extent to which the same or similar sub-award has been audited as a major program;
  o Whether the applicant has new personnel or new or substantially changed systems; and
  o The extent and results of federal awarding agency monitoring

The applications are discussed at length to ensure consistency and to determine whether the agency should be funded, the level of funding, which grant funding source should support the project, and whether the activity is a state or local benefit (40 percent of funds must be expended toward local benefit). Each applicant is reviewed for spending history; the agency’s risk for potential fraud, waste and abuse; and the agency’s willingness to comply with the contract conditions regarding timely vouchering.

When equipment is requested, the applicant is often asked to provide a local match. If the local match is unavailable, those applications are reviewed on a case-by-case basis.

Based on a targeted 5.2% annual reduction in fatalities, Missouri is projecting a five-year average fatality target of 871.6 fatalities by December 31, 2021.
C-2) Serious Traffic Injuries (STARS)

Based on a targeted 4.8% annual reduction in serious injuries, Missouri is projecting a five-year average serious injury target of 4,463.9 by December 31, 2021.

C-3) Fatalities / VMT (FARS/FHWA)

Based on a targeted 5.2% annual reduction in fatalities, Missouri is projecting a five-year average fatality rate target of 1.119 by December 31, 2021.
C-3a) Fatalities/VMT Rural (FARS/FHWA)

Based on an annual average increase of 1.74 percent in rural traffic fatalities from 2014 to 2018, Missouri is projecting a five-year average rural fatality rate of 1.517 by December 31, 2021.

C-3b) Fatalities/VMT Urban (FARS/FHWA)

Based on an annual average increase of 7.73 percent in urban traffic fatalities from 2014 to 2018, Missouri is projecting a five-year average urban fatality rate of 1.051 by December 31, 2021.
Based on an annual average increase of 4.29 percent in unrestrained passenger vehicle occupant fatalities from 2014 to 2018, Missouri is projecting a five-year average of 399.3 unrestrained passenger vehicle occupant fatalities by December 31, 2021.

**C-5) Alcohol-Impaired Driving Fatalities (FARS)**

Based on an annual average increase of 3.41 percent in alcohol-impaired driving involved fatalities from 2014 to 2018, Missouri is projecting a five-year average of 251.5 alcohol-impaired driving involved fatalities of 251.5 by December 31, 2021.

*Note: due to Missouri not collecting BAC on their crash report, preliminary 2019 state data will not be used for alcohol-impaired driver involved fatalities.*
C-6) Speeding Related Fatalities (FARS)

Based on an annual average increase of 7.49 percent in speed related fatalities from 2014 to 2018, Missouri is projecting a five-year average of 343.7 speed related fatalities by December 31, 2021.

C-7) MotorcyclistFatalities (FARS)

Based on an annual average increase of 4.84 percent in motorcyclist fatalities from 2014 to 2018, Missouri is projecting a five-year average of 122.3 motorcyclist fatalities by December 31, 2021.
C-8) Unhelmeted Motorcyclist Fatalities (FARS)

Based on an annual average increase of 14.29 percent in unhelmeted motorcyclist fatalities from 2014 to 2018, Missouri is projecting a five-year average of 15.9 unhelmeted motorcyclist fatalities by December 31, 2021.

C-9) Drivers Aged 20 or Younger Involved in Fatal Crashes (FARS)

Based on an annual average increase of .41 percent of drivers 20 or younger involved in fatal crashes from 2014 to 2018, Missouri is projecting a five year average of 112.1 fatalities by December 31, 2021.
C-10) Pedestrian Fatalities (FARS)

Based on an annual average increase of 9.23 percent in pedestrian fatalities from 2014 to 2018, Missouri is projecting a five-year average of 110.5 pedestrian fatalities by December 31, 2021.

C-11) Bicyclist Fatalities (FARS)

Based on an annual average decrease of 12.00 percent in bicyclist fatalities from 2014 to 2018, Missouri is projecting a five-year average of 3.1 bicyclist fatalities by December 31, 2021.
Missouri’s goal is to increase statewide observed seat belt use of front seat outboard occupants in passenger vehicles 1 percentage point annually from the 2019 calendar base year rate of 88% to 90% by December 31, 2021.

Performance Plan

State HSP performance targets are identical to the State DOT targets for common performance measures (fatality, fatality rate, and serious injuries) reported in the HSIP annual report, as coordinated through the State SHSP.

**Core Behavior Measures**

| B-1 | Observed seat belt use for passenger vehicles, front seat outboard occupants (survey) | Annual | 2021 | 2021 | 90.00 |

**Activity Measures**

| A-1 | Number of seat belt citations issued during FY19 grant-funded enforcement activities | | | 18,140 |
| A-2 | Number of impaired driving arrests made during FY19 grant-funded enforcement activities | | | 5,030 (includes 450 Drug DWI arrests) |
| A-3 | Number of speeding citations issued during FY19 grant-funded enforcement activities | | | 62,123 |

**Program areas**

**Commercial Motor Vehicles**

Commercial motor vehicles make up approximately 20 percent of all traffic on Missouri interstates. Between 2014 and 2018, CMVs were involved in 9.1 percent of all traffic crashes, 14.2 percent of fatal traffic crashes, and 8.0 percent of serious injury crashes in Missouri. It’s a common misconception that the CMV driver is usually responsible for the crash. During the last five years, when analyzing the known CMV drivers involved in fatal and serious injury crashes, 56.8 percent had no contributing circumstance to the crashes.

The Motor Carrier Safety Assistance Program (MCSAP) is a federal grant program that provides financial assistance to states to reduce the number and severity of crashes and hazardous materials incidents involving commercial motor vehicles. The goal of the MCSAP is to reduce CMV involved crashes, fatalities, and injuries through consistent, uniform and effective CMV safety programs. Investing grant monies in appropriate safety programs will increase the likelihood that safety defects, driver deficiencies, and unsafe motor carrier practices will be detected and corrected before they become contributing factors to crashes. The Highway Safety and Traffic Division administers MCSAP, but the MCSAP program operates under a separate federal grant. Goals, benchmarks and strategies are outlined within the Commercial Vehicle Safety Plan (CVSP), which is submitted to the Federal Motor Carrier Safety Administration.

**Associated Performance Measures: N/A**

**Countermeasure Strategy: N/A**
Communications (Media)

From 2005-2019, due to the combined efforts of highway safety advocates in the MCRS, 5,166 lives have been saved on MO roadways, a decrease of 30 percent.

The coalition credits a combination of law enforcement, educational efforts, emergency medical services, engineering enhancements and public policy as the successful formula for saving lives. However, the historic four “E’s” of safety must be expanded to include Evaluation and Everyone. Measuring success by Evaluation of performance measures holds each of us accountable for its success. In turn, addressing the need to change traffic safety culture challenges each person to make personal responsibility for their behavior as a roadway user and includes EVERYONE.

While our roads are safer than they have been in many years, there are still too many crashes and senseless deaths happening every year. We are committed to further reducing the number of traffic crashes in Missouri, so we must work even harder to reach those remaining people who haven’t gotten the message that:

- Seat belts save lives;
- Drinking and driving are a deadly mix;
- Speeding is a leading cause of serious injury and fatality crashes;
- Aggressive driving is dangerous and deadly driving;
- Distracted drivers are dangerous drivers; and
- Parents and caregivers must secure children in size-and age-appropriate car seats that are properly installed.

This is accomplished by developing highly visible, catchy campaigns that are coupled with strong enforcement efforts. We rely on our traffic safety partners to be active participants in these campaigns. Some of the most effective campaigns have been the national law enforcement mobilization efforts such as “Click It or Ticket” and “Drive Sober or Get Pulled Over.” People heard about the mobilizations in the media, and drivers were aware that the risk of apprehension was high. These campaigns have proven their ability to not only heighten awareness, but also to ultimately make positive behavioral changes.

Specific substance-impaired messaging has been incorporated into all impaired driving messages, which includes illegal, prescription and over the counter drugs. These efforts have been beneficial in gaining attention and awareness to the dangers of driving under the influence of drugs and alcohol and have created a buzz of interaction among followers on social media.

Efforts to reach our state’s teens are prevalent throughout the year in structured conferences with TRACTION and educational seminars and assemblies with ThinkFirst and First Impact. These efforts promote safe driving practices for our younger, most vulnerable drivers.

Missouri’s Buckle Up Phone Down campaign has provided a grassroots effort that has impacted over 13,000 individuals and over 500 businesses by accepting the challenge and taking the pledge to buckle up the driver and all passengers in their vehicle and to put the phone down while driving.

In order to continue to raise awareness and change driving attitudes and behaviors, the safe driving messages need to be perpetuated through traditional media vehicles (TV, radio, print, outdoor, digital) as well as through social media throughout the year. Social media has become a key part of the highway safety campaigns, increasing awareness and conversation about safe driving, complementing PSA distributions and helping to spread campaign messages virally. Social media efforts will continue through mainstream platforms such as Facebook and Twitter, Instagram and SnapChat. Dynamic
Message Boards (DMS) statewide help promote campaign awareness by alerting the traveling public to enforcement efforts.

**Associated Performance Measures**

- **C-1)** Number of traffic fatalities (FARS)
- **C-2)** Number of serious injuries in traffic crashes (State crash data files)
- **C-4)** Number of unrestrained passenger vehicle occupant fatalities, all seat positions (FARS)
- **C-5)** Number of fatalities in crashes involving a driver or motorcycle operator with a BAC of .08 and above (FARS)
- **C-10)** Number of pedestrian fatalities (FARS)
- **C-11)** Number of bicyclists fatalities (FARS)

**Countermeasure Strategy: Public Information and Education**

**Project Safety Impacts**

Paid media will be utilized to influence driver behavior in various fields including occupant protection, impaired driving, distracted driving, speed and aggressive driving, work zones, and bicycle and pedestrian awareness. Paid media, in conjunction with high visibility enforcement, is one of the most common Countermeasures That Work identified to influence behavior to reduce fatalities.

**Linkage Between Program Area**

Missouri will use paid media to influence driver and passenger behavior in the fields of speed and aggressive driving, occupant protection, impaired driving, distracted driving, and bicycle/pedestrian awareness. This is in direct relation to core performance measure C1 and C2, overall fatality and serious injury crashes, and funds will be used to pay for both broadcast and social media and other promotions in conjunction with scheduled enforcement mobilizations. This is done to promote Missouri’s traffic safety issues to improve understanding and increase compliance with state traffic laws, thereby reducing fatalities and serious injuries.

**Rationale**

Paid media, in conjunction with high visibility enforcement, is one of the most common countermeasures identified to influence driver and passenger behavior. Missouri will utilize paid media in this scope to further reduce fatal and serious injury crashes.

**Planned activities in countermeasure strategy**

*Alliance Sports Marketing*

Planned activity number: 154AL-2021-AL-A1-00 Sub-recipient: HSO

**Planned Activity Description**

The funding will allow the HSO to contract with Alliance Sports Marketing to coordinate sponsorship elements with 20 sports venues throughout Missouri. This campaign brings the impaired driving message to dirt track venues and minor league sporting events where recreational activity and drinking occur.
Funding sources: 154 Transfer Funds-AL  Match: N/A

### Bike and Pedestrian Paid Media

Planned activity number: PM-2021-02-05-00  Sub-recipient: HSO

**Planned Activity Description**

This funding will be used for professional marketing services to generate effective and compelling messages to reach Missourians regarding safe driving. Creative work produced could include TV and radio scripts, and/or production, posters, billboards, online banners, etc. It could also include any technical services such as dubbing fees for creative products. We are now also incorporating Spanish and ASL into all of our messages.

Impaired Driving (Drug and Alcohol)

Substance-impaired drivers contributed to 22.9 percent of Missouri’s traffic crash fatalities during the past five years. Alcohol remains the primary contributor to substance-impaired driving crashes; however, the number of persons under the influence of prescription medications and/or illicit drugs continues to increase. Male drivers were more likely than females to be involved in substance-impaired driving crashes. During the past five years, males were responsible for 80.4 percent of substance-impaired driving fatalities. Fourteen percent of the children less than 15 years of age, who were killed in motor vehicle crashes over the last five years, were riding with a substance-impaired driver who often was an underage-impaired driver.

State Judicial Outreach Liaison:

Missouri has recently received special project funding from the American Bar Association to start a State Judicial Outreach Liaison (SJOL) program beginning July 2020. The goal is to establish a peer-to-peer relationship with the judiciary of the State of Missouri in order to increase their knowledge and participation of State Highway Safety Office (SHSO) safety initiatives and increase the judiciary knowledge of challenges in adjudicating impaired driving cases. The SJOL will address these challenges through establishing a partnership with the judiciary by providing education and technical assistance.
utilizing resources such as current science, research and data, information on evidence-based sentencing practices, DWI Courts, Ignition Interlocks, case law, and offender assessment and treatment throughout the State. Also, the SJOL will contact as many court districts, as allowed by funding, to establish good working relationships with the courts and will seek input from those court districts the type of trainings needed in those areas for the judiciary. Further, the SJOL will work with the Missouri Department of Revenue to educate court districts and the judiciary regarding the need and use for the Ignition Interlock program in Missouri. Highway safety will measure the success of the SJOL program by monitoring completion of the goals and objectives of the program including: overall number of agencies contacted by the SJOL, overall meetings and/or trainings attended by the SJOL, overall meetings and/or trainings attended by judges and prosecutors conducted by the SJOL, and the dollars spent vs. dollars available for each SJOL.

The SJOL project is funded via a two-year grant from the American Bar Association. If the HSO determines the project is successful and an asset to continue, the HSO will seek to continue the project through NHTSA funding in the FY22 Highway Safety Plan.

Legislation regarding Sobriety Checkpoints:

In 2017, the Missouri legislature drafted and approved an appropriations bill which restricted the HSO to fund one dollar toward sobriety checkpoints. It was the hope of the HSO that this legislation would be reversed in the 2018 and 2019 legislative sessions, however, it was upheld both years. It was also upheld in the 2020 legislative session. As a result, there will be no sobriety checkpoints at least through June 30, 2021, paid for by Highway Safety funding.

Associated Performance Measures

- C-5) Number of fatalities in crashes involving a driver or motorcycle operator with a BAC of .08 and above (FARS)

Countermeasure Strategies:

Court Monitoring

Project Safety Impacts
Court monitoring will be used to ensure that impaired driving offenders will be held accountable for their actions. This is done through active monitoring of court cases to ensure sentencing is carried out correctly.

Linkage Between Program Area
In order to address core measure C-5, fatalities involving impaired drivers, court monitoring is used to ensure that impaired drivers who are arrested are tried in court and held accountable for their actions. Funds will be used to pay for court monitors through Mothers Against Drunk Driving.

Rationale
Mothers Against Drunk Driving utilizes a court monitoring program where monitors are sent throughout the state and observe court sessions involving impaired drivers. These monitors keep track of the various courts and make reports back on the courts that have issues. Action is then taken to address this issue with the individual courts.
High Visibility Saturation Patrols

Project Safety Impacts
High visibility enforcement will take place throughout Missouri via sustained, year-long efforts, which are supplemented by mini-grants during the Drive Sober or Get Pulled Over (DSOPGPO) national campaign in August and the Holiday Impaired Driving campaign in December. In addition, Missouri conducts quarterly DSOGPO enforcement projects in March, May and July. In addition to stopping motorists, enforcement will also include party and bar patrols where under-age drivers have gathered and are consuming alcohol prior to returning to their vehicles.

Linkage Between Program Area
To reduce alcohol-impaired driving involved fatalities, Missouri is projecting a five-year average of 251.5 alcohol-impaired driving involved fatalities by December 31, 2021. High-visibility saturation patrols will be used throughout the year in addition to mini-grants during scheduled national mobilizations and party and bar patrols, supplemented with paid media, to target alcohol and drug-impaired drivers and underage drivers consuming alcohol. Funding will be utilized from 154 and 405d funds.

Rationale
High-visibility enforcement coupled with a strong-media campaign have been the foundation for Missouri's Impaired Driving program for years. Enforcement projects are selected based on crash data and prior performance, while media is selected to reach the young-male target audience through broadcast and social media. These efforts are a major component of Missouri's Impaired Driving Strategic Plan.

Alcohol Vendor Compliance Checks

Project Safety Impacts
Impaired driving, no matter what age, is one of the most common crash causes not only in Missouri but throughout the United States. In Missouri specifically, from 2016-2018, there were 33 fatal crashes and 123 serious injury crashes involving an impaired driver under the age of 21. In addition, there were 46 people killed and 168 seriously injured in these crashes. According to the Countermeasures that Work, 9th Edition, studies document that well-publicized and vigorous compliance checks reduce alcohol sales to youth; for example, a review of eight high quality studies found that compliance checks reduced sales to underage people by an average of 42%.

Linkage Between Program Area
Alcohol vendors are required to verify ages of young customers to ensure they are 21 or older. However, young people can obtain alcohol without much difficulty either without showing identification or providing counterfeit identification obtainable on the internet. The ease at which underage drivers can obtain alcohol either at retail outlets or bars, coupled with driving as they leave these establishments, increases the potential of impaired driving crashes that could have been prevented at the point of sale.

Rationale
Stopping underage drivers from purchasing alcohol will reduce young impaired driver crashes. Under-21 individuals who drive to a retail outlet, party or bar will most likely attempt to leave the same way. Preventing the purchase/consumption of alcohol will minimize the number of these young drivers from getting behind the wheel intoxicated.
Highway Safety Office Program Management

Project Safety Impacts

High-visibility enforcement is one of the foundational efforts of Missouri’s highway safety program. This goes not only for hazardous moving violations but also for impaired drivers, whether alcohol or drug impaired. Efforts identified with this countermeasure strategy will be used to allow the highway safety office to fund enforcement efforts, pay for highway safety office coordination, and also fund other projects directly tied to impaired driving enforcement. 154 funding will only be utilized for alcohol impairment enforcement.

Databases must be built, maintained, or enhanced to ensure data on DWI offenders is readily available, and officers who are specially trained to detect intoxicated and/or impaired drivers are up to date on required training, and sub-recipients are able to perform grant related duties with minimal efforts.

Linkage Between Program Area

Funds will be used to allow for internal projects to address core measure C-5 addressing fatal crashes involving impaired drivers. Crashes involving impaired drivers account for 25 to 30% of Missouri crash fatalities each year.

With impaired driving-related fatalities consistently accounting for 25-30% of Missouri’s fatalities, core measure C-5, Number of Fatalities Involving an Impaired Driver, will be addressed by providing funding for establishing, maintaining and/or enhancing various databases that track driving while intoxicated or drug impaired offenders, or specially trained officers.

Rationale

Funding will be used to pay for internal projects which include impaired driving enforcement, highway safety office coordination directed towards impaired driving enforcement, and training for law enforcement officers. These projects will be directed towards all impaired drivers including youth impaired drivers.

The DWI Tracking System provides a small amount of assistance to ensure offenders are tracked and DWI history is accurate. The DRE Sustainment project will keep Missouri’s current DRE database functioning and provide funding to link Missouri’s database into NHTSA’s when the national database is ready to be interfaced. The BA Instrument & SFST Program will continue to be developed to track breath instrument maintenance and DWI officer training similar to the DRE Database.

Ignition Interlocks

Project Safety Impacts

According to the Countermeasures That Work Ninth Edition, an ignition interlock prevents a vehicle from starting unless the driver provides a breath sample with a BAC lower than a pre-set level, usually .02. Interlocks typically are used as a condition of probation for DWI offenders, to prevent them from driving while impaired by alcohol after their driver’s licenses have been reinstated.

Linkage Between Program Area

Ignition Interlock system directly relates with performance measure C-5 – Number of fatalities with a driver with .08 or above in that it is a system designed to keep repeat offenders off of the roadways, which in turn will keep the number of fatalities at a minimum in this performance measure.
Rationale
The rationale for selecting the countermeasure strategy is that ignition interlocks have demonstrated effectiveness in controlling impaired driving while they are installed. Having a database to help the agency partners troubleshoot areas of concerns with these interlock systems will be beneficial to the users of the systems and the community. The funding allocation is 154 funds.

Impaired Driving Law Enforcement Liaison

Project Safety Impacts
Three law enforcement liaisons are deployed throughout the State with the sole purpose of recruiting and/or encouraging law enforcement agencies to participate in Click It or Ticket and Drive Sober or Get Pulled Over national mobilizations, and quarterly efforts that Missouri sponsors to support these national mobilizations as well.

Linkage Between Program Area
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national mobilizations which also reflect two of Missouri's major problem areas: seat belt use and impaired driving. The high visibility enforcement that results from these efforts directly affects driver behavior in these areas. Funding for Missouri's LEL program is allocated from both Section 402 and 405d funds.

Rationale
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national mobilizations which also reflect two of Missouri's major problem areas: seat belt use and impaired driving. Missouri has been encouraged for years by the NHTSA to implement an LEL program to encourage law enforcement participation and this program is now in its fourth year.

Law Enforcement Training

Project Safety Impacts
This countermeasure will be used to provide the training necessary for law-enforcement to both conduct active impaired driving enforcement as well as impaired driving investigations and crash investigations involving impaired drivers.

Linkage Between Program Area
Substance-impaired driving is a major problem in Missouri accounting for as much as 25% of Missouri’s traffic crash fatalities during the past five years. In order to address impaired drivers, impaired driving crashes, and the investigations and quarterly activity associated with impaired driving violations, Missouri will use various sub recipients to provide the training necessary so that law enforcement has all the tools available to them in order to combat impaired driving.

Rationale
The Missouri Safety Center will provide training in both standardized field sobriety testing and drug recognition expert training. In addition, the Missouri Department of Revenue will receive funding to provide training to prosecutors and law enforcement on current Missouri impaired driving statutes and case law.
Prosecutor Training
Project Safety Impacts
In order to keep Missouri’s prosecutors trained on the most current impaired driving court cases and state laws, Missouri will fund two projects to provide this training to ensure impaired drivers get either the punishment or treatment necessary to reduce repeat cases of impaired driving.

Linkage Between Program Area
With impaired driving-related fatalities consistently accounting for 25-30% of Missouri’s fatalities, core measure C-5, Number of Fatalities Involving an Impaired Driver, will be addressed by providing funding for training to prosecutors to keep up to date in Missouri State and case laws affecting impaired driving.

Rationale
Prosecutor training will be conducted by Missouri’s Office of Prosecution Services (MOPS) and the Missouri Department of Revenue (DOR). MOPS houses Missouri’s Traffic Safety Resource Prosecutor while DOR will use funding to cover salary and costs for a dedicated impaired driving attorney and assistant, who provide court case and training assistance throughout Missouri.

School programs
Project Safety Impacts
Young drivers will be educated on the dangers of impaired driving via a number of school-based projects.

Linkage Between Program Area
With impaired driving-related fatalities consistently accounting for 25-30% of Missouri’s fatalities, core measure C-5, Number of Fatalities Involving an Impaired Driver, will be addressed by providing funding to various sub-recipients to provide education regarding the dangers and consequences of driving impaired, or fund the impaired driving portion of a larger traffic safety program.

Rationale
Each of the planned activities named below provide education and training to young drivers on the dangers of impaired driving. The MADD Power of Parents and Power of Youth project also includes education for parents, while SMART, CHEERS, DRIVE SAFE, DRIVE SMART project also trains servers at alcohol vending establishments. The ThinkFirst-Youth Alcohol and Safe Communities/TRACTION Youth Impaired are the impaired driving components of larger traffic safety programs funded under the Young Driver program area.

Planned activities in countermeasure strategies
Court Monitoring Program
Planned activity number: M5CS-2021-03-01-00 Sub-recipient: Mothers Against Drunk Driving

Planned Activity Description
Mothers Against Drunk Driving continues to partner with the Office of Highway Safety to track and monitor DWI offenses (misdemeanor and felony) in specific, targeted counties in Missouri. Through data collected, any trends and/or breakdowns that occur throughout the judicial proceedings will be identified, analyzed and offered solutions. Court monitoring in the state is conducted by both paid and volunteer staff with MADD. Funding for this project covers salaries for coordination of the program, travel expenses, office supplies and indirect costs.

**BA Instrument & SFST-Build, Deploy, Support**

Planned activity number:  154AL-2021-AL-E1-00  Sub-recipient: REJIS

**Planned Activity Description**
Breath Instruments are placed through the Missouri Safety Center with agencies throughout the state and need to be tracked. In addition, a database that houses information regarding qualified SFST Instructors is needed to support the impaired driving program and the arrest and prosecution of DWI arrests. This project will develop a program to track both breath instruments and SFST Instructors in the state and will include hosting fees for the system.
Many impaired driving court cases are dismissed due to questions regarding breath instruments or the SFSTs given by officers, which not only puts potentially deadly drivers back on the streets but also demoralizes law enforcement, often deterring officers from being involved in impaired-driving projects simply because they do not want to be embarrassed in court.

Ensuring that Missouri’s breath instruments are maintained properly and according to a mandatory fixed schedule will minimize challenges to the instruments’ results defense counsels in court proceedings. Similarly, by being able to track SFST instructors and their training, Missouri’s SFST instructors (and those they instruct) will be as professionally trained as possible which will also minimize challenges to their credentials in court.

**DWI Tracking System (DWITS)**

Planned activity number: 154AL-2021-AL-40-00  
Sub-recipient: MO State Hwy. Patrol

**Planned Activity Description**

The DWITS provides a means of tracking driving while intoxicated (DWI) offenses through their full life cycle -- from arrest to final court disposition. The Missouri State Highway Patrol offers regional training seminars on the DWI Tracking System with training curriculum geared toward law enforcement agencies, prosecuting attorney offices and courts. Budget items include postage, supplies for DWITS tutorials and travel expenses.

### Impaired Driving Countermeasures

Planned activity number: 154AL-2021-AL-E0-00  
Sub-recipient: Missouri Safety Center

#### Planned Activity Description

The Missouri Safety Center provides professional staff for coordination of the breath alcohol, SFST, and ignition interlock programs. The Safety Center provides oversight of breath instrument placement, maintenance and service, inventory, and technical assistance across the State. In addition, MSC provides technical assistance in the area of ignition interlocks by monitoring the ignition interlock service centers and field-testing ignition interlock devices to determine compliance with the administrative rules governing the program. The MSC provides a call center for those who have questions about each of the programs and DWI clients who have questions regarding ignition interlocks. The funding covers costs such as salaries and fringe, equipment, operational expenses, training, travel, and indirect costs.

**Alcohol Safety Awareness and Prevention**
Planned activity number: 154AL-2021-AL-77-00   Sub-recipient: MO Div. of Alcohol & Tobacco Control

**Planned Activity Description**
Server Training is designed to address the problem of underage drinking and over-service of patrons. Simply put, bar patrons may not be driving at the time of service, but they will be soon after leaving the bar. Stopping the problem at the source will help prevent underage drunken drivers and over-served individuals from getting behind the wheel and potentially being involved in a serious injury or fatal crash. The program teaches responsible retail practices and gives the retailer the knowledge and tools to prevent service of alcohol to minors and over-intoxicated patrons. This program is a one stop shop for retailers to get all the information needed to legally operate and assist in preventing underage drinking and driving crashes.

ATC Agents will provide training to servers which includes distributing ID Checking Guides and liquor law books provided through this project. Through this training liquor establishments will gain an understanding of Missouri’s liquor laws and the liabilities they may encounter with underage or over-served patrons. With this, the liquor establishments will better understand their role in reducing the problem of intoxicated driver-related crashes.

**DOR and Law Enforcement Training**

Planned activity number: M5OT-2021-03-05-00  
Sub-recipient: MO Dept. of Revenue

Planned Activity Description
The Office of Highway Safety provides grant funding to the Missouri Department of Revenue for staff attorney training and regional workshops for law enforcement. It is imperative to keep both law enforcement and the department attorneys updated in current impaired-driving related training and apprised of new case law in the state. The funding covers printing and any travel expenses that are incurred.

**DWI Enforcement Training**

Planned activity number: M5TR-2021-03-06-00 Sub-recipient: Missouri Southern State University

Planned Activity Description
Missouri Southern State University provides training to law enforcement in the area of impaired driving. The courses offered are DWI Crash Investigation, DWI Enforcement Strategies for Small Departments, SFST Update, ARIDE, and Effective Report Writing and Courtroom Testimony for the Patrol Officer: A Survival Guide for the DWI Investigator. Highway Safety Funding covers instructor fees, educational materials, monitor fees (if required), meeting room fees, cleaning/maintenance for meeting rooms, certificate of completion creation and distribution (if needs to be mailed) and advertising fee (if needed).

**BAC/DRE/SFST/ARIDE Training**

Planned activity number: M5TR-2021-03-05-00  
Sub-recipient: MO State Hwy. Patrol
Planned Activity Description
This project covers impaired driving training for both the Missouri State Highway Patrol and local law enforcement agencies. Some of the training is for continuing education for Highway Patrol staff, while other training is hosted at the Highway Patrol Training Academy. The grant covers expenses associated with attendance at national impaired driving conferences/training and courses offered at the Highway Patrol Training Academy such as Breath Alcohol training, SFST Instructor, ARIDE and DRE training/recertification. Some equipment will also be purchased under this grant for and the DREs.

Attorney and Management Analyst
Planned activity number: M5OT-2021-03-04-00 Sub-recipient: MO Dept. of Revenue

Planned Activity Description
This project provides for Appellate Counsel for the Department of Revenue for cases involving impaired driving. The Appellate Counsel works with the Missouri State Highway Patrol, the Missouri Safety Center and other law enforcement agencies to train officers in impaired driving laws and historical case law and provides dedicated legal representation to DOR for appeals to the Missouri appellate courts. Also provided for is a Management Analyst under the direct supervision of the Appellate Counsel. The Management Analyst would compile statistical data on all chemical refusal cases and promote strict prosecution standards for repeat offenders and ignition interlock requirements. The Management Analyst would further conduct extensive background checks for all applicants for reinstatement on five and ten-year license denials, and for limited driving privileges, with special emphasis on those subject to five- and ten-year license denials, and offenders enrolled in certified DWI Court programs statewide. This employee would also serve as Ignition Interlock Device (IID) Coordinator for the Department to monitor those offenders required to maintain proof of installation of an IID for either limited privileges or license reinstatement. The Management Analyst would give training to law enforcement, prosecutors and judges on ignition interlock devices and help to shape rules, processes and laws regarding ignition interlock devices, criminal history checks and ignition interlock devices.

Traffic Safety Resource Prosecutor
Planned activity number: M5CS-2021-03-02-00 Sub-recipient: MO Office of Prosecution Services
Planned Activity Description

This project provides for two traffic safety resource prosecutors (TSRP) that focus on traffic safety issues, particularly impaired driving, and serve as a resource to other prosecutors and law enforcement officers. The Deputy Director of the Missouri Office of Prosecution Services serves half-time as a TSRP and a special prosecutor in the office serves fulltime. The TSRP Program will provide training to law enforcement, prosecutors and other traffic safety advocates in the state. Traffic Safety Newsletters will be sent out as necessary to inform the criminal justice community of any new issues and provide an update on case law. In addition, the TSRP program will provide technical assistance and serve as special prosecutor on some cases. The funding for this project covers salaries, coordination costs for training programs, operational & educational expenses and travel expenses.

Safe and Sober
Planned activity number: M5TR-2021-03-02-00 Sub-recipient: Safe and Sober, Inc.

Planned Activity Description
The Safe and Sober Program is an effective program that educates students for free on the dangers of drugs and alcohol while reinforcing positive decision making and responsibility. The program is designed to give high school and middle school students, along with their parents and teachers, the information they need to prevent underage drinking. By properly educating students and their parents on the criminal, civil, personal and emotional consequences of underage drinking, the hope is to encourage safe choices both now and as the students’ transition toward adulthood. The funding will provide program development, travel, educational materials and operational expenses of the program.

MADD Power of Parents and Power of Youth
Planned activity number: 154AL-2021-AL-79-00 Sub-recipient: Mothers Against Drunk Driving

Planned Activity Description
MADD Power of Parents and Power of Youth programs are part of a community mobilization to educate entire communities about the dangers and impact of underage alcohol use and drunken driving. Power of Parents seeks to equip parents to have intentional, ongoing and potentially lifesaving conversations about alcohol with their kids. Power of Youth empowers teens to resist peer pressure to make smart, healthy decisions about not drinking alcohol before they turn 21 and to never get in a car after drinking nor with someone who has been drinking. Missouri’s hopes for a safer future are riding on tomorrow’s drivers and we want to get our youth off to a
good start. MADD is focused on tackling underage drinking (and underage drinking & driving), a problem that threatens the safety of our kids and endangers entire communities, now and down the road. Funding will be used to support travel, training, educational materials and operational expenses of the program.

Motorcycle Safety

A motorcycle is inherently more difficult to operate than a passenger vehicle, requiring more physical skill and offering riders almost no protection in a crash. Between 2014 and 2018 in Missouri, motorcycle operators were involved in 529 fatalities. Of those 529 fatalities, 524 were the motorcycle drivers and/or riders. Motorcycles currently represent 2 percent of the registered vehicles in Missouri but were involved in 12.5 percent of all fatal traffic crashes during the last five years (2014-2018).

An area of concern is the number of unlicensed and improperly licensed motorcycle operators involved in crashes. Between 2014 and 2018, 42.5 percent of the motorcycle involved fatalities involved an unlicensed or improperly licensed motorcycle operator.

Repeal of Universal Helmet Law

Unfortunately, Missouri repealed its universal helmet law, which is effective August 28, 2020. The helmet law now only covers those under 26 years of age or anyone only operating on a permit, and is only allowed as a secondary offense. Based on this repeal and results other states experienced after repealing helmet laws, Missouri expects lower helmet usage and performance measures C-7 and C-8 (Number of Motorcycle Fatalities and Number of Unhelmeted Motorcycle Fatalities) to be negatively impacted. Missouri is forecasting an increase of 30-35 motorcyclist fatalities each year. In addition, over the last 3 years Missouri has averaged 11 unhelmeted motorcyclist fatalities per year, which is now expected to increase. This is a measure that will be closely watched over the next few years to determine the effect on fatalities.

Associated Performance Measures

- C-7) Number of motorcyclist fatalities (FARS)
- C-8) Number of unhelmeted motorcyclist fatalities (FARS)

Countermeasure Strategy: Motorcycle Rider Training

Project Safety Impacts
Motorcycle Rider Training will be utilized to educate motorcyclists on safe riding practices.

Linkage Between Program Area
Motorcyclists represent more than ten percent of fatalities on Missouri's roadways, far over-represented when comparing the actual number of motorcyclist versus automobiles. Missouri will utilize
Motorcycle Rider Training to educate motorcyclists on safe riding practices, to reduce the overall number of motorcyclist fatalities (Core Measure C-5) and number of unhelmeted motorcyclist fatalities (Core Measure C-8).

**Rationale**
Motorcycle Rider Training will be utilized to educate motorcyclists on safe riding practices. Training will take place hands-on and in classroom settings by the Springfield Police Department and the Missouri Safety Center, and through coordination via the Missouri Safety Center of the Missouri Motorcycle Safety Program.

**Planned activities in countermeasure strategies:**

*Civilian Motorcycle Safety Course*  
Planned Activity Number: M9MA-2021-12-02-00 Sub-recipient: Springfield PD

**Planned Activity Description**
This project will provide both in-class and hands-on motorcycle safety skills training for up to 30 student participants.

Funding sources: FAST Act 405f Match: N/A

**Non-motorized (Pedestrians and Bicyclist)**

Walking and bicycle riding are essential transportation modes for many Missourians. For transit or motor vehicle users, every trip begins and ends as a pedestrian. Public health, economic, and environmental factors are elevating the importance of these modes. Many Missourians do not have access to a personal vehicle, are not physically capable of driving, simply decide not to drive, or delay licensure. Across Missouri, communities are responding with changes to land-use development practices and complete streets policies.

Many of the urban areas like St. Louis, Kansas City, Springfield and Columbia have robust pedestrian and bicyclist networks.

Motor vehicle crashes involving pedestrians do not occur in extremely large numbers, but when a pedestrian is involved in a traffic crash, the potential for injury or death is much greater. From 2014 through 2018, pedestrian involved crashes comprised less than 1 percent of all crashes, but accounted for 10.5 percent of all fatalities and 5.4 percent of all serious injuries in Missouri.

Pedestrian age and vehicle speed are the two most significant factors determining the outcome of a crash. This is especially true for children and older pedestrians. Research shows that pedestrians hit by a vehicle traveling 20 mph have a 5 percent chance of death, whereas those struck at 40 mph have an 85 percent chance of death.

Pedestrian trips are a larger percentage of all trips in the urbanized areas of the state. Of the 2014-2018 Missouri pedestrian fatalities, 75.5 percent occurred in urban areas and 24.4 percent occurred in rural areas. The Vision Zero approach to traffic safety, which began in Sweden and has now been adopted in Missouri, views traffic deaths and serious injuries as preventable not inevitable.

When evaluating pedestrian crashes in Missouri, it is important to know how a pedestrian is defined. The general perception of a pedestrian is an individual who has chosen walking as their preferred mode of transportation. For the purposes of traffic safety, the definition is broader and includes anyone on foot or using a wheelchair. For example, a person who intentionally exits a vehicle and then is struck by another vehicle is considered a pedestrian.

**Associated Performance Measures**

- C-10) Number of pedestrian fatalities (FARS)
- C-11) Number of bicyclists fatalities (FARS)

**Countermeasure Strategy: Elementary-age Child Bicyclist Training**

**Project Safety Impacts**

These projects will train young bicyclists on proper biking safety protocol, including wearing a safety helmet, fit of the bicycle and basic road traffic safety rules. Having bicyclists trained in these important areas will help to reduce bicyclists related fatalities and serious injuries.
Linkage Between Program Area
By training young bicyclists to follow the basic road traffic safety rules, including wearing a safety helmet will directly relate to core performance measure C1, C2 (overall fatality and serious injury crashes), and C11 (number of bicyclist fatalities).

Rationale
Missouri doesn’t typically have a large number of bicyclist fatalities, however, it is important to continue to educate and train young bicyclists of the traffic safety rules in order to keep our bicyclists fatalities minimized. Missouri Capitol Police and the Osage County Health Dept. will host training events in the Mid Missouri area.

Planned activities in countermeasure strategy

Let's Ride at the Capitol
Planned activity number: PS-2021-02-02-00 Sub-recipient: MO Capitol Police

Planned Activity Description
Missouri Capitol Police plans to host two bicycle safety training sessions in Mid Missouri to train young bicyclists on proper riding safety procedures, equipment, and rules of the road. Missouri Capitol Police will work in conjunction with a local bicycle shop in order to carry out these trainings.

Occupant Protection (Adult and Child Passenger Safety)
During 2014-2018, 63 percent of drivers and occupants killed in crashes in Missouri were unrestrained. The number of unrestrained teens killed in Missouri crashes during the last five years is even higher – 71.8 percent. When analyzing only the pickup truck drivers and occupants, 74 percent of those killed during the last five years were unrestrained. Missouri’s observed safety belt use rate of 87.7 percent in 2019 is below the national average of 90.7 percent. Missouri conducts a statewide observational safety belt survey annually, a teen safety belt survey biennially, and a child passenger and commercial motor vehicle safety belt use survey alternately when funds are available.
The child safety seat and commercial motor vehicle driver safety belt use surveys are conducted periodically. Teen safety belt use is of particular concern. This group’s safety belt use was 13 percent lower than the 2018 overall use rate.

Properly wearing a safety belt or using a child restraint is the single most effective way to prevent death and reduce injuries in a crash. According to the National Highway Traffic Safety Administration, safety restraint systems, when utilized correctly, reduce the risk of fatal injuries to front-seat passenger vehicle occupants by 45 percent and reduce the risk of moderate-to-critical injuries by 50 percent. For occupants of light trucks, using safety belts lower the risk of fatal injuries by 60 percent and moderate-to-critical injuries by 65 percent.

**Associated Performance Measures**

- **C-4** Number of unrestrained passenger vehicle occupant fatalities, all seat positions (FARS)
- **B-1** Observed seat belt use for passenger vehicles, front seat outboard occupants (survey)

**Countermeasure Strategies:**

**Child Restraint System Inspection Station(s)**

**Project Safety Impacts**

Per the Countermeasures that Works, Ninth Edition, parents who receive training, both hands-on as well as instructional, on the correct installation of child safety seats were much more likely to correctly use their child restraints. Proper training and certification of child passenger safety technicians are vital to ensure parents and caregivers have access to the knowledge they need to install child safety seats.

**Linkage Between Program Area**

To address child passenger safety, Core Measure C-4 (Number of Unrestrained Passenger Vehicle Occupant Fatalities), and increasing overall seat belt usage in Missouri, the OHS will work with partners to provide child passenger safety technician training.

**Rationale**

The HSO is working together with the State Child Passenger Safety Instructors to provide training to individuals who wish to become CPS Technicians. Grant funding will be provided to reimburse the instructors for training costs and instructor fees to teach the CPS Technician certification and re-certification courses. This program will help ensure that parents/caregivers properly install safety seats for young children.

**CPS Outreach Programs**

**Project Safety Impacts**

CPS outreach will be utilized by attending public and private outreach events to continue to educate the public regarding the importance of properly restraining their children. The trained CPS Technicians will also be continuing to educate parents/caregivers to properly install child safety at their outreach events. Funding will also be used to provide car seats to CPS technicians at registered inspection stations to distribute to low-income families during CPS events and installations.

**Linkage Between Program Area**

While Missouri’s most recent child passenger safety survey indicated 94% of the observed children were secured in safety seats, it is assumed (based on information from crash reports) that a number of the seats are not properly installed in vehicles. Core Outcome Measure C-4 (Number of Unrestrained
Passenger Vehicle Occupant Fatalities) and Core Behavior Measure B-1 (Observed Seat Belt Use) are addressed by this countermeasure strategy by providing child seats and proper training to ensure children are safely restrained in motor vehicles.

**Rationale**
CPS Outreach will be utilized to ensure child seats are available to low-income families, and that training is provided to CPS Technicians to educate parents/caregivers in the proper installation of child seats.

**Highway Safety Office Program Management**

**Project Safety Impacts**
Highway Safety Office Program Management will be utilized to reduce fatal and serious injuries among young children by training CPS technicians and parents/caregivers to properly install child safety seats, and in properly restraining children in those seats. Funding will also be used to provide car seats to CPS technicians to distribute to low-income families during CPS events and installations, provide coordination efforts from the Office of Highway Safety, and to conduct the annual Statewide Safety Belt Survey.

**Linkage Between Program Area**
Core Outcome Measure C-4 (Number of Unrestrained Passenger Vehicle Occupant Fatalities) and Core Behavior Measure B-1 (Observed Seat Belt Use) are addressed by this countermeasure strategy by providing child seats and proper training to ensure children are safety restrained in motor vehicles, and the staff coordination from the Office of Highway Safety to support these activities. In addition, the Statewide Safety Belt Survey is also funded through this countermeasure. The 2019 statewide safety belt use rate in Missouri was 88%, with a target to increase to 89% by the end of 2020.

**Rationale**
Highway Safety Office Program Management will be utilized to ensure child seats are available to low-income families, and that training is provided to child passenger safety technicians and parents/caregivers in the proper installation of child seats. Most of the Office of Highway Safety child passenger safety projects are managed through internal contracts, with the exception of the Statewide Safety Belt Survey, Teen Seat Belt Survey and CPS survey.

**School programs**

**Project Safety Impacts**
Schools provide well-defined and somewhat controlled audiences for seat belt use programs. Education and other communications strategies can be tailored to a specific audience. These programs are often well received in the community. While Missouri's most recent child passenger safety survey indicated 94% of the observed children were secured in safety seats, it is assumed (based on information from crash reports) that a number of children are not in the proper safety seat or in only a seat belt when they are too small.

**Linkage Between Program Area**
While Missouri's most recent child passenger safety survey indicated 94% of the observed children were secured in safety seats, it is assumed (based on information from crash reports) that a number of the seats are not properly installed in vehicles. Core Outcome Measure C-4 (Number of Unrestrained Passenger Vehicle Occupant Fatalities) and Core Behavior Measure B-1 (Observed Seat Belt Use) are addressed by this countermeasure strategy by providing child seats and proper training to ensure children are safely restrained in motor vehicles.
**Rationale**
The Boosters to Belts program will use high school student mentors to provide an elementary school program to educate children on the proper height and weight to be out of a booster seat and the proper ways to sit in a booster seat.

**Occupant Protection Law Enforcement Liaison**

**Project Safety Impacts**
Three law enforcement liaisons are deployed throughout the State with the sole purpose of recruiting and/or encouraging law enforcement agencies to participate in Click It or Ticket and Drive Sober or Get Pulled Over national mobilizations, and quarterly efforts that Missouri sponsors to support these national mobilizations and Missouri specific speed enforcement campaigns as well.

**Linkage Between Program Area**
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national and local Missouri mobilizations which also reflect three of Missouri's major problem areas: speed, seat belt use and impaired driving. The high visibility enforcement that results from these efforts directly affects driver behavior in these areas. Funding for Missouri's LEL program is allocated from both Section 402 and 405d funds. 405d funds will specifically be utilized only for the impaired driving mobilizations.

**Rationale**
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national and local Missouri mobilizations which also reflect three of Missouri's major problem areas: speed, seat belt use and impaired driving. The high visibility enforcement that results from these efforts directly affects driver behavior in these areas. Missouri has been encouraged for years by the NHTSA to implement an LEL program to encourage law enforcement participation and this program is now in its third year.

**Short-term, High Visibility Seat Belt Law Enforcement**

**Project Safety Impacts**
High visibility enforcement will take place throughout Missouri via sustained, year-long efforts, which are supplemented by mini-grants during the Click It or Ticket national campaign in May. In addition, Missouri conducts youth seat belt enforcement in March, and CPS enforcement in September.

**Linkage Between Program Area**
Based on an annual average increase of 4.29 percent in these fatalities from 2014-2018, Missouri has set a goal of 399.3 or fewer unrestrained passenger vehicle occupant fatalities by December 31, 2021. Approximately 63% of Missouri's yearly passenger vehicle occupant fatalities are unrestrained drivers and passengers. Using both enforcement and media, Missouri plans on targeting all drivers, with a focus on young male drivers, to encourage safety belt use in the state. Funding will be utilized from Section 402 and 405b funds.

**Rationale**
High-visibility enforcement coupled with a strong-media campaign have been the foundation for Missouri's Occupant Protection program for years. Enforcement projects are selected based on crash data and prior performance, while media is selected to reach all drivers but especially the young-male target audience through broadcast and social media. These efforts are a major component of Missouri's Occupant Protection Strategic Plan.
Planned activities in countermeasure strategies

**CPS Program Training**  
Planned activity number: CR-2021-05-06-00  
Sub-recipient: HSO

**Planned Activity Description**  
This program will help ensure that parents/caregivers properly install safety seats for young children. This will be accomplished by providing funding for travel/training expenses and fees for CPS instructors to teach the CPS technician certification and recertification statewide. In addition, funding will be utilized for expenses related to continuing education training for the CPS instructors in order to ensure they receive current CPS information to help maintain a successful CPS program in Missouri. The HSO will also provide funding for the certification fees for those individuals across the state of Missouri in need of financial assistance to attend the CPS technician courses offered.

**Boosters to Belts**  
Planned activity number: CP-2021-09-01-00  
Sub-recipient: DCCCA

**Planned Activity Description**  
The program was developed to change the perception of children that believe booster seats are only for babies and to educate how booster seats and seat belts are a necessary component in transporting young children safely. The program creates awareness of proper occupant protection practices for all ages. The program is provided via an interactive 30-minute presentation that highlights booster seat usage and the importance of buckling up to travel safely on every ride.

This project will provide the "Booster to Belts" program to Missouri teens who already participate in programs like TRACTION and SAFE. These teen leaders will take the program to their elementary schools and present to the children and youth in their schools. This interaction of teens and youth will build a stronger message and build an awareness and value for our teens to continue wearing seat belts every day.

Statewide Safety Belt Survey
Planned activity number: M2HVE-2021-05-35-00    Sub-recipient: Missouri Safety Center

Planned Activity Description
The Missouri Safety Center will manage the NHTSA-approved Missouri statewide seat belt survey for 2021. This survey will be conducted in 28 counties statewide that are in the top 85% of vehicle occupant fatalities in the state. This project will cover the expense to train and monitor data collectors (surveyors), scheduling, field protocols and reporting requirements, compile and analyze the survey data, furnish a detailed report of the findings, and provide updated maps of safety belt usage by site.

Occupant Protection Enforcement
Planned activity number: M2HVE-2021-05-00-G0

Planned Activity Description
This funding will be used to pay for officer overtime for year-round occupant protection enforcement projects and for special mobilization campaigns including Teen Seat Belt, Click It or Ticket, and Child Passenger Safety week.

Sub-recipients
**Enforcement- Occupant Protection Campaign**

**Planned activity number:** M2HVE-2021-05-34-00  **Sub-recipient:** Missouri Safety Center

**Planned Activity Description**

The Missouri Safety Center (MSC) will manage this program by encouraging targeted law enforcement agencies to participate in the State's national CIOT occupant protection enforcement and special mobilization efforts. This will be accomplished through sub-award grants to law enforcement agencies, making available overtime funds to increase occupant protection enforcement during the May and June national CIOT campaign, the teen seat belt campaign and the CPS campaign. High Visibility Enforcement is a proven effective strategy used to increase seat belt use.

**Older Drivers**

Continuing to drive safely and enjoying alternative transportation means enhanced mobility and independence for older adults in Missouri. These factors heavily influence the quality of life for older adults and their friends and families.

Statewide data reveals that the number of Missourians age 65 or over is projected to grow exponentially during the next 10 years, bringing the total number of older adults to an estimated 1.4 million (source: Missouri Office of Administration). This represents an 87 percent increase in older adults since the year 2000. This is not surprising given that across the nation 10,000 people will turn 65 every day through 2030. Statewide, adults 65 and over will make up more than 21 percent of the population by 2030. Many Missouri counties can expect 1 in 4 of their residents to be 65 or over at that time.

Additionally, as people age, fitness-to-drive (the ability to drive safely) can be compromised by changes in vision, movement, thinking and memory, or even use of certain medications. These risks increase in advanced older age, as does the risk of injury when a crash does occur. Our society is highly mobile. In some areas of the state, driving may be one of the few means of transportation, and the car remains important to many older Missourians. Although cars today are safer, new technology takes time to be incorporated into the overall vehicle fleet.

**Associated Performance Measures**

- **C-1)** Number of traffic fatalities (FARS)
- **C-2)** Number of serious injuries in traffic crashes (State crash data files)
Countermeasure Strategies:

Highway Safety Office Program Management

**Project Safety Impacts**
The Office of Highway Safety will continue to research, develop and implement driver education seminars for the aging driver, to include how to refresh their driving skills, age-specific traffic safety issues, and effects of medication and physical conditions on driving ability.

**Linkage Between Program Area**
Missourians are living longer and desire to remain active in the community, which means there is a need to maintain independence and mobility; however, medical conditions that may impair driving ability become more prevalent in older age. Whether older adults have the capacity to meet their transportation needs is often measured by how many hold a valid driver license. In 2020, 932,590 people age 65 or older held a Missouri driver license. They accounted for 21 percent of the 4,457,217 persons licensed in the state (*source: Missouri Department of Revenue*). During the years of 2014-2018, 903 drivers age 65 or older were involved in fatal car crashes.

**Rationale**
Funds will be used by the Office of Highway Safety to coordinate the Older Driver Program.

**License Screening and Testing**

**Project Safety Impacts**
As drivers age, often their cognitive skills diminish making it more difficult for them to operate a motor vehicle safely. License screening for drivers to recognize common road signs or the ability to drive after a stroke are two projects Missouri is utilizing to research issues involving older drivers.

**Linkage Between Program Area**
Missourians are living longer and desire to remain active in the community, which means there is a need to maintain independence and mobility; however, medical conditions that may impair driving ability become more likely in older age. Whether older adults have the capacity to meet their transportation needs is often measured by how many hold a valid driver license. In 2020, 932,590 people age 65 or older held a Missouri driver license. They accounted for 21 percent of the 4,457,217 persons licensed in the state (*source: Missouri Department of Revenue*). During the years of 2014-2018, 903 drivers age 65 or older were involved in fatal car crashes. Funds will be used to address older drivers' cognitive abilities.

**Rationale**
Funds will be used for Washington University research regarding older drivers' abilities to recognize common roadway signs and to determine factors to be addressed before drivers that suffer cognitive issues can return to drive. In addition, The University of Missouri – Columbia will be providing training to older drivers and family members or caregivers on the issues of aging and driving.

**Planned activities in countermeasure strategies:**

*In-house Project for Mature Driver Program*

Planned activity number: DE-2021-02-04-00 Sub-recipient: HSO
Planned Activity Description
The HSO will continue to research, develop and implement driver education seminars for the aging driver, to include how to refresh their driving skills, age-specific traffic safety issues, and effects of medication and physical conditions on driving ability.

Funding sources: FAST Act NHTSA 402  
Eligible Use of Funds: Driver Education (FAST)

**Older Driver Program (Keep Your Keys)**
Planned activity number: DE-2021-02-03-00  
Sub-recipient: University of MO Curators

Planned Activity Description
The University of Missouri – Columbia will be providing training to older drivers and family members or caregivers on the issues of aging and driving. The Keep Your Keys Program will provide non-objective information for the older driver to use in making an informative decision about their current driving status. This program will open the discussion to plan for driving retirement. Project costs include printing of educational materials, marketing of training program, operational expenses, part-time staff positions, and indirect costs.

Funding sources: FAST Act NHTSA 402

**Rural Driving Study and Traffic Signs**
Planned activity number: DL-2021-02-02-00  
Sub-recipient: Washington University

Planned Activity Description
The Highway Safety Office continues to work with Washington University to produce and implement countermeasures that reduce crashes involving older drivers. This project will focus on refining the scoring procedures for the Traffic Sign Naming Test and the correlation with the on-road testing. Under this project, standardized materials will be provided to state driver examiners, license renewal staff, driving rehabilitation specialists and driving researchers. The standardized training materials will be provided to the DMVs to assist with standardized administration and scoring procedures. The funding for this research project will cover salaries, consultant services, lab testing fees, operational and travel expenses, and indirect costs.

Funding sources: FAST Act NHTSA 402  
Eligible Use of Funds: Driver Licensing (FAST)

Railroad Safety
While most of the Highway Safety projects fall under obvious program areas, a select few projects are outside the scope of the typical areas. However, these projects are important in keeping people safe on Missouri roadways. Those projects are described in this section.

The Highway Safety Office sponsors training for law enforcement officers, first responders, and other safety advocates on a wide variety of program areas.
One of these projects is safety at railroad crossings; these are often forgotten when thinking of roadway safety. Missouri houses the second and third largest hubs for rail traffic in the nation. While this is a benefit to the state, many drivers feel railroad crossings are a burden to obey. One HSO project focuses on these crossings by assisting law enforcement agencies in enforcing the crossing guard laws of the state. Too many people ignore the crossing guard signs and lose their lives in the process.

Associated Performance Measures

- C-1) Number of traffic fatalities (FARS)

Countermeasure Strategy: Railway Safety Education

Project Safety Impacts
Railway crossing fatalities generally do not represent a significant number of overall fatalities in Missouri, but they are crashes that can be avoided usually through driver attention and actions. This countermeasure allows outreach to the driving public as well as enforcement to reduce these types of crashes.

Linkage Between Program Area
There were 12 fatalities at Missouri railroad crossings in the last three years (2017-2019). Through safety presentations, positive enforcement and grade crossing collision training, Missouri intends to use railway safety education to reduce the overall number of fatalities.

Rationale
As most railway crossing incidents are a result of driver error, the Office of Highway Safety will partner with Missouri Operation Lifesaver to provide rail crossing safety presentations and positive enforcement efforts, in addition to Officer on the Train programs and grade crossing collision investigation training.

Planned Activity in Countermeasure strategy

Missouri Operation Lifesaver
Planned activity number: RH-2021-02-01-00 Sub-recipient: MO Operation Lifesaver

Planned Activity Description
Operation lifesaver will conduct safety presentations, Positive Enforcement Efforts, Officer on the Train programs, and Grade Crossing Collision Investigation courses across Missouri. Funding will provide safety materials and supplies, and expenses to conduct the enforcement. A media campaign will also be developed regarding safety at railroad crossings.

Funding sources: FAST Act NHTSA 402 Match: N/A

Roadway Safety/Traffic Engineering

Engineering is a vital component of a comprehensive approach to improve highway safety. The techniques and strategies engineers use to design and improve roads can have a direct impact on the safety of motorists. Engineering countermeasures to improve safety can be implemented during the design of a roadway or in modifications after a road has already been built. During design, engineers strive to create a roadway environment that mitigates traffic crashes from the start. This can be achieved in various aspects of design: lane widths, the use of shoulders, curve design, signing, striping, rumble strips, etc. However, some roads were designed long before today’s safety countermeasures were
discovered. As a result, many roads will often be retrofitted to include safety enhancements such as rumble strips, brighter signs and pavement marking, and intersection improvements.

One of the most successful examples of this in Missouri is the addition of paved shoulders and rumble stripes on most of Missouri’s most heavily traveled roads. Thousands of miles of rumble strips have been installed along major and minor roads throughout the state. This combination of paved shoulders and rumble strips has proven very beneficial in reducing crashes in which a vehicle leaves its lane or the roadway, one of Missouri’s most common severe crash types. Roundabouts and J-Turn intersections are successful examples of how intersections can be improved to eliminate or greatly reduce right angle crashes, another common severe crash type in Missouri.

**Associated Performance Measures**

- C-1) Number of traffic fatalities (FARS)

**Countermeasure Strategies: HSO Program Management**

**Project Safety Impacts**

This strategy will enable local entities to gather traffic crash information, roadway assessments and other data in their communities to use in developing strategies to reduce crashes.

**Linkage Between Program Area**

The Missouri Department of Transportation focuses on the statewide road infrastructure when considering safety improvements. However, many times the local communities also must address issues on their roadways that otherwise would not be considered by the MoDOT. The Office of Highway Safety will coordinate efforts to assist communities in gathering data and developing plans to address roadways with safety concerns in their area. In addition, the annual Blueprint Conference is also coordinated through the Office of Highway Safety, and brings together a variety of Missouri Coalition for Roadway Safety partners who learn the strategies and countermeasures available to take back to their communities to reduce fatal and serious injury crashes.

**Rationale**

Office of Highway Safety coordination of the Blueprint conference and the local Traffic Engineering Assistance Program allows for local partners to identify problems affecting their area and the countermeasures and strategies to address those issues.

**Planned activities in countermeasure strategies:**

*Highway Emergency Response Training*

**Planned activity number:** EM-2021-02-01-00 Sub-recipient: University of Missouri Curators

**Planned Activity Description**

Individuals injured in highway incidents need quick, on-scene access to emergency care by trained fire and emergency service first responders to institute life saving measures. The University of Missouri Fire and Rescue Training Institute will provide training to first responders in an effort to reduce the number of deaths and seriousness of injuries related to traffic crashes by decreasing the transport time to hospitals and reducing the amount of time to open the roadway. Emergency Medical Services is an essential component of a comprehensive traffic safety system. When injuries occur as a result of motor vehicle crashes, EMS provides the best “last chance” to reduce death and disability. The training programs meet standards of the National Fire Protection Association.
Traffic Engineering Assistance Program
Planned activity number: RS-2021-11-01-00 Sub-recipient: HSO

Planned Activity Description
Like education, enforcement, and emergency services, engineering places a key role in providing a comprehensive approach for reducing fatalities and serious injuries on Missouri roadways. While MoDOT has a strong safety engineering program through FHWA’s Highway Safety Improvement Program (HSIP), many local agencies lack the expertise and resources to even know where to start when it comes to construction safety improvements on the roadway. For many cities and counties, it is necessary to obtain the services of private consulting engineering firms in order to help them in identifying safety concerns on their streets and highways and any corresponding solutions. Correction of these problems often requires detailed evaluation including traffic crash analysis, traffic counts, speed surveys, origin and destination studies, non-rapid transit studies, parking supply and demand, capacity analysis, lighting analysis and design, traffic control devices (inventory and layout), or traffic signal progression analysis and design. This is not a complete list of what studies a consultant may be called upon to perform but accounts for some of the most common needs related to constructing safety improvements. The Traffic Engineering Assistance Program (TEAP) aids these agencies by providing funding support for hiring necessary consultant services to identify potential safety improvements in the local jurisdiction. TEAP does not provide funding for any actual construction of improvements. Funding only provides assistance in carrying out the necessary analysis or studies. In most cases, safety improvements will never be constructed without an adequate understanding of the need and scale of a potential solution. By supporting TEAP, we are providing necessary assistance to these local agencies in the hope safety improvements are ultimately budgeted and constructed.

2021 Blueprint Conference
Planned activity number: RS-2021-11-02-00 Sub-recipient: University of Missouri Curators

Planned Activity Description
To assist the state engineers and all statewide safety advocates, the Highway Safety office provides funding to coordinate a statewide highway safety conference. This conference provides continuing education credit and education on keeping Missouri roadways safe.
### 2021 Blueprint Coordinator

**Planned activity number:** CP-2021-09-10-00  
**Sub-recipient:** HSO

**Planned Activity Description**
Based on recommendations from the Governor’s Highway Safety Association, the Highway Safety Office seeks to create a new position responsible for developing and implementing Missouri’s Strategic Highway Safety Plan, also known as the “Blueprint”. This position will coordinate those functions throughout Missouri with the Highway Safety Office staff and NHTSA-funded projects. This project will cover salary, fringe benefits and travel. The HSO will not have appropriation authority from the Missouri Legislature to fill this position until July 2021. Therefore, the FY21 project will only include costs beginning July 2021.

**Funding sources:** FAST Act NHTSA 402  
**Match:** N/A  
**Eligible Use of Funds:** Highway Safety Program Management  
**Local Benefit:** N/A

### Speed Management

Aggressive driving can be any one of us, when we make the choice to drive over the speed limit; change lanes several times in a short distance and/or follow too closely. Aggressive driving is a costly decision, often made in an instant, but can have lifelong consequences. According to the National Highway Traffic Safety Administration, aggressive driving is when an individual commits a combination of moving traffic offenses so as to endanger other persons or property. During the last five years, the combination of aggressive driving behaviors contributed to 51 percent of fatalities and 45 percent of serious injuries in Missouri. Speed-related conditions, including exceeding the speed limit and too fast for conditions, accounted for the most fatalities of all aggressive driving behaviors. Thirty-six percent of all Missouri fatalities over the last five years were speed-related.

**Associated Performance Measures**
- C-6) Number of speeding-related fatalities (FARS)

**Countermeasure Strategies:**

**Highway Safety Office Program Management**

**Project Safety Impacts**
The Office of Highway Safety will continue to work with law enforcement agencies to encourage increased high visibility enforcement in order to deter aggressive driving and driving at high rates of speed. Planned activities include Highway Safety staff support of sustained year-round hazardous moving vehicle enforcement to deter speeding and aggressive driving, and providing the necessary training for staff and safety partners to continue to educate on aggressive driving issues.

**Linkage Between Program Area**
To address Missouri's problem of speeding and aggressive driving, the State will continue to employ Highway Safety staff to support law enforcement agencies that use high visibility enforcement to reduce speed-related fatalities. Approximately 50% of Missouri's Section 402 award is applied towards this effort.
Based on an annual average increase of 7.49 percent in aggressive driving related fatalities from 2014 to 2018, Missouri is projecting 343.7 five-year average aggressive driving related fatalities by December 31, 2021.

During the last five years, the combination of aggressive driving behaviors contributed to 51 percent of fatalities and 45 percent of serious injuries in Missouri. Speed-related conditions, including exceeding the speed limit and too fast for conditions, accounted for the most fatalities of all aggressive driving behaviors. Nearly 36 percent of all Missouri fatalities over the last five years were speed-related.

Rationale
Projects funded by the Highway Safety Office in the aggressive driving program area include Highway Safety staff support of law enforcement activities.

Law Enforcement Training

Project Safety Impacts
Law enforcement officers must receive training, both for new officers or refresher for veteran officers, in order to have the skills and knowledge to better address the issues of speeding and aggressive driving in their jurisdictions.

Linkage Between Program Area
Based on an annual average increase of 7.49 percent in aggressive driving related fatalities from 2014 to 2018, Missouri is projecting 343.7 five-year average aggressive driving related fatalities by December 31, 2021.

During the last five years, the combination of aggressive driving behaviors contributed to 51 percent of fatalities and 45 percent of serious injuries in Missouri. Speed-related conditions, including exceeding the speed limit and too fast for conditions, accounted for the most fatalities of all aggressive driving behaviors. Nearly 36 percent of all Missouri fatalities over the last five years were speed-related.

For law enforcement to remain up-to-date on speed and aggressive driving laws and strategies, a number of training projects will be employed to ensure officers have the skills needed to combat these types of offenses and crashes.

Rationale
Law enforcement will receive training on various traffic enforcement topics during various conferences and classroom settings, including crash investigation, emergency response, radar & EVOC, and others. These trainings will allow officers to have the skills needed to better enforce laws regarding speed and aggressive driving.

Speed Management Law Enforcement Liaison

Project Safety Impacts
Three law enforcement liaisons are deployed throughout the State with the sole purpose of recruiting and/or encouraging law enforcement agencies to participate in Click It or Ticket and Drive Sober or Get Pulled Over national mobilizations, and quarterly efforts that Missouri sponsors to support these national mobilizations and Missouri specific speed enforcement campaigns as well.

Linkage Between Program Area
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national and local Missouri mobilizations which also reflect three of Missouri's major problem areas: speed, seat belt use and impaired driving. The high visibility enforcement that results from these efforts directly affects driver behavior in these areas. Funding for Missouri's LEL program is
allocated from both Section 402 and 405d funds. 405d funds will specifically be utilized only for the impaired driving mobilizations.

Rationale
Funding is allocated to deploy law enforcement liaisons throughout the State to encourage agencies to participate in the national and local Missouri mobilizations which also reflect three of Missouri's major problem areas: speed, seat belt use and impaired driving. The high visibility enforcement that results from these efforts directly affects driver behavior in these areas. Missouri has been encouraged for years by the NHTSA to implement an LEL program to encourage law enforcement participation and this program is now in its third year.

Sustained Enforcement

Project Safety Impacts
The Office of Highway Safety will continue to work with law enforcement agencies to encourage increased high visibility enforcement in order to deter aggressive driving and driving at high rates of speed. Planned activities include sustained year-round hazardous moving vehicle enforcement to deter speeding and aggressive driving.

Linkage Between Program Area
Based on an annual average increase of 7.49 percent in aggressive driving related fatalities from 2014 to 2018, Missouri is projecting 343.7 five-year average aggressive driving related fatalities by December 31, 2021.

During the last five years, the combination of aggressive driving behaviors contributed to 51 percent of fatalities and 45 percent of serious injuries in Missouri. Speed-related conditions, including exceeding the speed limit and too fast for conditions, accounted for the most fatalities of all aggressive driving behaviors. Nearly 36 percent of all Missouri fatalities over the last five years were speed-related. Aggressive driving can be any one of us, when we make the choice to drive over the speed limit; change lanes several times in a short distance and/or follow too closely. Aggressive driving is a costly decision, often made in an instant, but can have lifelong consequences. According to the National Highway Traffic Safety Administration, aggressive driving is when an individual commits a combination of moving traffic offenses so as to endanger other persons or property.

Speeding remains one of the leading crash causation factors in Missouri, and speed-related fatalities are on the rise. Due to this, Missouri employs the sustained, high visibility enforcement model throughout the state through most of the calendar year. Many law enforcement agencies in Missouri would not have a traffic program without highway safety grant experience, so this activity is essential to Missouri's speed/aggressive driving program.

Rationale
As speeding remains one of the top crash factors in fatal crashes in Missouri, planned activities include sustained year-round hazardous moving vehicle enforcement to deter speeding and aggressive driving.

Planned activities in countermeasure strategies:

HSTD-Statewide PTS
Planned activity number: PT-2021-02-00-00 Sub-recipient: HSO

Planned Activity Description
This project is for a statewide effort to improve police traffic services programs. When needed, this account will be reduced to fund specific sub-recipient agreements.
2021 402 Operations
Planned activity number: RS-2021-11-03-00  Sub-recipient: HSO

Planned Activity Description
 Provide training expenses for Highway Safety Staff, law enforcement and other external partners; fund the public opinion survey; Dedicated Impaired Driving Enforcement/Dedicated HMV Enforcement workshop; hOUR program lunch and learns, and the TOPS training program.

Funding sources: FAST Act NHTSA 402 Match: N/A

Accident Invest/Training/Reconstruction
Planned activity number: AI-2021-04-01-00  Sub-recipient: MO State Hwy. Patrol

Planned Activity Description
 The Missouri State Highway Patrol Training Academy will offer Basic Crash Investigation and the Crash Investigation series of courses, Advanced Crash Investigation and Crash Reconstruction. The NHTSA funding for this contract is a negotiated 62% of the total flat rate, with the Patrol paying the remaining 38%. The Patrol has calculated each course to include $18 per day for meals at the Patrol Academy, $25 per day classroom fee (lights, maintenance for the room), $37 per day lodging at the Patrol Academy; which totals $80 per day per student, per training session.

Funding sources: FAST Act NHTSA 402 Match: N/A
Instructor Development Course
Planned activity number: DE-2021-02-02-00 Sub-recipient: Missouri Safety Center

Planned Activity Description
The program will work with law enforcement agencies, as well as other agencies related to highway safety, to develop quality instructors throughout the state, who will be able to teach a wide variety of curricula related to traffic safety. The program will utilize NHTSA’s core curriculum to cultivate instructors who will then be better prepared to consult with law enforcement agencies, provide expert testimony and teach select training sessions throughout the state.

**Driver Instructor Course**
Planned activity number:  DE-2021-02-01-00  Sub-recipient: Missouri Safety Center

**Planned Activity Description**
The program will work with law enforcement agencies, as well as other agencies related to
highway safety, to educate instructors to enable them to train law enforcement officers on safe
driving practices. The program will develop instructors with the proper way to teach driver
training curricula that can be utilized at law enforcement agencies throughout the state regarding
driver safety.

**Law Enforcement Training**
Planned activity number:  PT-2021-02-E6-00  Sub-recipient: MO Southern State University

**Planned Activity Description**
Missouri Southern State University will provide comprehensive traffic enforcement related
training to law enforcement officers in the state. The training will include Vehicle Search and
Seizure, High Risk Vehicle Stops, Beyond the Ticket, Marijuana Minute, Emergency Vehicle
Operations Course, and Missouri Motor Vehicle Law. Highway Safety Funding covers instructor
fees, educational materials, monitor fees (if required), meeting room fees, cleaning/maintenance
for meeting rooms, certificate of completion creation and distribution (if needs to be mailed) and
advertising fee (if needed).

Skill Development
Planned activity number: PT-2021-02-E5-00   Sub-recipient: MO State Hwy. Patrol

Planned Activity Description
Under this project, the Missouri State Highway Patrol will send officers to skill enhancement
training courses, seminars and conferences. Some of those include: Combined Accident
Reduction Effort (CARE) Conference, Law Enforcement Traffic Safety Advisory Council
Conference, IACP Highway Safety Program Annual Conference, Lifesavers Conference,
Uniform Safety Education Officers Workshop, Major Crash Investigative Unit, Midwest
Association of Technical Accident Investigators Annual Conference, Kidz in Motion
Conference, Operation Lifesaver, and the annual MADD Conference.

Radar/EVOC/Instructor Development and Equipment Purchase
Planned activity number: PT-2021-02-E4-00   Sub-recipient: MO State Hwy. Patrol

Planned Activity Description
The Missouri State Highway Patrol Training Academy will offer Radar/Laser Operator and
Instructor, Emergency Vehicle Operations Course (EVOC) Basic, Instructor and Refresher, and
educational equipment and materials necessary for each of the courses. Additional equipment
requirements will be covered under the grant for items such as safety vests, tires for cars used in
EVOC, safety cones, etc. The funding for this contract is a negotiated 62% of the total flat rate,
with the Patrol paying the remaining 38%. The Patrol has calculated each course to include $18
per day for meals at the Patrol Academy, $25 per day classroom fee (lights, maintenance for the
room), $37 per day lodging at the Patrol Academy; which totals $80 per day per student, per
training session.

**Traffic Records**

The TRCC plays a role in the creation, approval and evaluation of the data improvement projects. The TRCC consists in developing initial project proposals as well as discusses the proposals openly in the TRCC bi-monthly meetings. The TRCC, through the discussion of proposed projects, prioritize the projects and determine the funding sources, and also works with the custodial agencies to develop and maintain the data quality reporting function.

The Missouri Traffic Records System works towards a formal data quality program with performance indicators for each of the six core system areas. Projects are selected based on recommendations from the most current assessments and their ability to meet six characteristics: timeliness, accuracy, integration, uniformity, accessibility and completeness.

These projects are evaluated on an annual basis to ensure they are in compliance with project milestones and their ability to improve the state’s traffic records data systems.

**Associated Performance Measures**
• C-1) Number of traffic fatalities (FARS)
• C-2) Number of serious injuries in traffic crashes (State crash data files)
• C-3) Fatalities/VMT (FARS, FHWA)
• C-4) Number of unrestrained passenger vehicle occupant fatalities, all seat positions (FARS)
• C-5) Number of fatalities in crashes involving a driver or motorcycle operator with a BAC of .08 and above (FARS)
• C-6) Number of speeding-related fatalities (FARS)
• C-7) Number of motorcyclist fatalities (FARS)
• C-8) Number of unhelmeted motorcyclist fatalities (FARS)
• C-9) Number of drivers age 20 or younger involved in fatal crashes (FARS)
• C-10) Number of pedestrian fatalities (FARS)
• C-11) Number of bicyclists fatalities (FARS)

**Countermeasure Strategies:**

**Highway Safety Office Program Management**

**Project Safety Impacts**
The Office of Highway Safety will coordinate support for the Traffic Records Forum and support integration and equipment to improve crash record data.

**Linkage Between Program Area**
Maintaining accurate crash data is essential to manage the data-driven programs that the Office of Highway Safety depends on. These projects will affect data in all core performance measures by assisting agencies in moving to more accurate electronic reporting and maintaining that data once it is reported:

1) To assure there is a robust traffic data system available to assist all data users in development of appropriate traffic safety countermeasures.
2) To move forward in upgrading and integrating the data systems used to collect crash data in the State.
3) To provide adequate training on an annual basis that will support and enhance the ability of state and local agencies in developing accident countermeasures.

**Rationale**
These projects will support conference registrations, meals, hotels and travel to the National Traffic Records Forum. Funding is also utilized to support e-crash and e-citation integration and equipment.

**Improves integration between one or more core highway safety databases**

**Project Safety Impacts**
Funding the projects in this countermeasure will be utilized to improve overall accuracy and completeness of crash data.

**Linkage Between Program Area**
Maintaining accurate crash data is essential to manage the data-driven programs that the Office of Highway Safety depends on. These projects will affect data in all core performance measures by assisting agencies in moving to more accurate electronic reporting and maintaining that data once it is reported:
1) To assure there is a robust traffic data system available to assist all data users in development of appropriate traffic safety countermeasures.
2) To move forward in upgrading and integrating the data systems used to collect crash data in the State.
3) To provide adequate training on an annual basis that will support and enhance the ability of state and local agencies in developing accident countermeasures.

Rationale
Funding will be utilized to support e-crash and e-citation integration and equipment among various local and state level agencies to improve overall accuracy and completeness of crash data.

Funding will also be utilized to add three contracted staff to assist in completing the accounting module for Show Me Courts.

**Planned activities in countermeasure strategies:**

*HSTD-Statewide 405c Data Program*

Planned activity number: M3DA-2021-04-00-00 Sub-recipient: HSO

**Planned Activity Description**

This project is for a statewide effort to improve Traffic Records Data programs. When needed, this account will be reduced to fund specific sub-recipient agreements.

Predictive Analytical Crash Project

Planned activity number: M3DA-2021-04-05-00 Sub-recipient: MO State Hwy. Patrol

Planned Activity Description

The Missouri State Highway Patrol Statistical Analysis Center (SAC) has developed a predictive model to provide law enforcement officers with a crash forecast. This project analyzes traffic crash data to predict locations and times in which traffic crashes are likely to occur. This forecast will assist officers in making smarter patrol decisions to deter bad driver behavior and prevent traffic crashes. The SAC will provide other agencies with the forecasting using a secure online portal, the Missouri Analytical Traffic Reporting Information Exchange (MATRIX). The MATRIX will facilitate collaboration among all law enforcement agencies in Missouri and encourage them to submit their crash reports electronically. Collecting these accurate and timely crash reports electronically will allow the SAC to quickly produce a more accurate crash forecast to distribute to law enforcement leading to safer roads across Missouri.

STARS and FARS Support

Planned activity number: M3DA-2021-04-04-00 Sub-recipient: MO State Hwy. Patrol
Planned Activity Description
Secure federal funding in order for MSHP develop a means to compile various timeliness, completeness, and accuracy measures to share with traffic records systems. MSHP will also develop the availability for personnel to track changes to crash report data electronically that is resubmitted to STARS. This project also updates coding to begin to support the STARS.net to view reports.

In addition, there were four milestones not completed from the FY20 planned activity. Those milestones will be completed early in FY21 and include creating a “batch job” to correct data and errors, training of MSHP IT personnel, ability to verify vehicle identification numbers within STARS, and to identify duplicate electronic crash report entries.

Statewide Traffic Accident Records System
Planned activity number: M3DA-2021-04-03-00 Sub-recipient: MO State Hwy. Patrol

Planned Activity Description
The purpose of this grant proposal is to continue the activities of the Statewide Traffic Accident Records System (STARS) Information Maintenance Project. This project will entail personnel from the Highway Patrol, Patrol Records Division, processing and encoding information from approximately 130,000 - 160,000 motor vehicle crash reports into the STARS. The funding will cover personnel, supplies, and travel to conferences.

In addition, the MSHP is currently re-writing the Missouri Model Uniform Crash Report. This requires consultant services to be utilized to update the crash report fields, forms, and user manuals. The consultant will also prepare a PowerPoint presentation for the MSHP to use in training law enforcement on the changes to the crash report.

Show Me Court Implementation
Planned activity number: M3DA-2021-04-07-00
Sub-recipient: Office of State Courts Administrator

Planned Activity Description
The Office of State Courts Administrator (OSCA) is requesting funding to improve the collection and management of traffic records, as well as increase the accuracy and timeliness of reporting disposition information. This will be accomplished by implementing the new case management system, Show-Me Courts, into municipal divisions that currently have no
automation, the Judicial Information System (JIS) or some other court software. Show-Me Courts contains the edit checks built into the application, so users will be prompted to fix or enter the required information at the time the case is initiated. A second part of the Show-Me Court system that should improve the record of conviction reporting is the Prosecutor Portal. This functionality will allow a ticket to be sent electronically from the police department's records management system to the prosecutor portal. The prosecutor will review the tickets and electronically send the information to the court on the cases they wish to file. With this process most of the data will be either entered by a person at the police department or received electronically through an e-ticketing system. Since fewer people will be doing data entry throughout the process it should reduce the potential for data entry errors and improve accuracy. Budget items include salary and fringe for an Education Management Analyst, Court Services Management Analyst and an Accountant for the implementation of Show-Me Courts.

**JIS Monitoring and Reporting**

Planned activity number: M3DA-2021-04-06-00 Sub-recipient: Office of State Courts Administrator

**Planned Activity Description**

The Office of State Courts Administrator (OSCA) is requesting funding to improve the collection and management of traffic records, as well as increase the accuracy and timeliness of reporting disposition information by monitoring the electronic transmission of traffic-related conviction data from the courts to DOR and MSHP to determine if on-site assistance or training/instruction in required to increase to accuracy and timeliness of reporting Office of State Courts Administrator tracks what percentage of cases reported to the Department of Revenue successfully within the 7-day requirement. It was found that 90%-100% of the cases reported successfully 90% of the time from April 1, 2018 to March 30, 2019. When measuring from April 1, 2019 to May 30, 2020, 90% - 100% of the cases reported successfully 92% of the time.

**Please note:** Supporting Documentation for this project is uploaded in the 405c section of this plan. The FY21 full IPR is also included in the 405c section on this plan.

**LETS Sustainment and Enhancement**

Planned activity number: M3DA-2021-04-08-00 Sub-recipient: REJIS

**Planned Activity Description**

REJIS will continue to provide operational support for LETS using their data center, operations and help desk staff. REJIS will continue to support LETS with training and "how to" question
resolution as well as support agencies to adopt LETS. Any improvements approved by Highway Safety will be identified before initiated. REJIS will administer the third party integrated diagramming software licensing as funded to assure support and version upgrades. REJIS staff will also work closely with Highway Safety and LETS customers to coordinate, plan and execute service management activities. The funding will cover the operational expenses and supplies of the project.

**Young Drivers**

Traffic crashes are the leading cause of death among youth in Missouri, accounting for 11 percent of traffic fatalities during the last five years. Although only comprising approximately 8 percent of Missouri licensed drivers, young drivers were involved in 17.7 percent of fatal and serious injury crashes during the last five years. These early driving years are of particular concern because of driver inexperience and the high frequency of risky behaviors such as speeding, distracted and drowsy driving, alcohol/drug use and failing to use safety belts.

The top 5 contributing circumstances attributable to young drivers of motor vehicles involved in 2014-2018 Missouri fatal and serious injury crashes were:

- Driving Too Fast for Conditions
- Failure to Yield
- Improper Lane Usage/Change
- Distracted/Inattentive Driving
- Speed Exceeded Limit

**Associated Performance Measures**

- C-9) Number of drivers age 20 or younger involved in fatal crashes (FARS)
Countermeasure Strategies:

**Driver Improvement Program**

Project Safety Impacts
The Driver Improvement Program allows traffic offenders to have reduced penalties in return for specialized education on proper driving behavior and the dangers of speeding/aggressive driving and driving without a properly fastened safety belt.

**Linkage Between Program Area**
The top 5 contributing circumstances attributable to young drivers of motor vehicles involved in 2014-2018 Missouri fatal and serious injury crashes were Driving Too Fast for Conditions, Failed to Yield, Improper Lane Usage / Change, Distracted / Inattentive, and Speed Exceeded Limit. The Driver Improvement Program, which coordinates the various driving schools throughout Missouri, is intended to give young drivers a second chance, while also providing education and awareness on these behaviors that they may have never been exposed to. This is Missouri's version of the "Traffic Violator School", which the Countermeasures That Work indicates can reduce subsequent crashes by 5% and violations by 8%.

**Rationale**
The Driver Improvement Program certifies and monitors the various driving schools throughout Missouri. This project, through the Missouri Safety Center, allows for the coordination of the Driver Improvement Program.

**Highway Safety Office Program Management**

Project Safety Impacts
Internal projects will be used to address distracted driving in younger drivers.

**Linkage Between Program Area**
The top 5 contributing circumstances attributable to young drivers of motor vehicles involved in 2014-2018 Missouri fatal and serious injury crashes were Driving Too Fast for Conditions, Failed to Yield, Improper Lane Usage / Change, Distracted / Inattentive, and Speed Exceeded Limit.

This project will specifically target younger driver programs involving distracted driving to reduce fatal and serious injury crashes among that age group. The Office of Highway Safety will also continue to encourage law enforcement to conduct high visibility enforcement looking for distracted drivers through the HMV grants. Teen and adult education will also continue in the area using school presentations and media campaigns.

**Rationale**
Funds will be used to provide support for the It Only Takes One project and the TRACTION program, both of which are programs that are used to directly influence younger drivers in the decisions they make, especially distracted driving.

**School Programs**

Project Safety Impacts
These activities will give young drivers the knowledge they need to be better drivers and influence their peers to do so as well.
Linkage Between Program Area

The top 5 contributing circumstances attributable to young drivers of motor vehicles involved in 2014-2018 Missouri fatal and serious injury crashes were Driving Too Fast for Conditions, Failed to Yield, Improper Lane Usage / Change, Distracted / Inattentive, and Speed Exceeded Limit.

Through utilizing school resources, the Office of Highway Safety will partner with the University of Missouri and Safe Communities organizations to bring education to young drivers. This will be in the form of school leadership conferences, school public service announcement contests, and in-class presentations on driving behavior.

Rationale

School programs offer a convenient avenue to reach young, high-risk drivers while they are early in their driving career. Through teen leadership conferences and in-class presentations, this strategy allows students to have firsthand knowledge of good/bad driving behaviors and gives them the tools they need to be a leader for this cause among their peers.

Planned Activities in countermeasure strategies:

Teen Driving Programs
Planned activity number: CP-2021-09-09-00 Sub-recipient: HSO

Planned Activity Description

The funding from the program will be used to update and reprint the Roadwise Guide and other brochures for distribution, initiate new and support existing young driver safety programs in Missouri.

Funding sources: FAST act NHTSA 402 Match: N/A
Eligible Use of Funds: Community Traffic Safety Project (FAST) Local Benefit: N/A

B.R.A.K.E.S-Put on the Brakes, Inc.
Planned activity number: CP-2021-09-03-00 Sub-recipient: B.R.A.K.E.S.- Put on the Brakes, Inc.

Planned Activity Description

B.R.A.K.E.S. workshops are geared towards teenagers 15-19 (16-20) who have a driver's license or learner's permit, and at least 30 hours of driving experience. B.R.A.K.E.S. teaches teens crash avoidance techniques on a closed course, in a controlled environment. Our professional instructors educate teens and parents through both classroom and hands-on experience. Our goal is to train and educate teen drivers and their parents nationwide. Included in this goal is a commitment to garner support from donors who are equally committed to helping save lives.

Teen Driving Workshops- these workshops will train and educate teenage drivers and their parents about the importance of safe and responsible driving. Workshops will be conducted on a Saturday and Sunday, (2-4 hr.) classes per day, training 180 students and their parents per weekend.

Eligible Use of Funds: Highway Safety Management Program Local Benefit: N/A
### Safe Communities / TRACTION

Planned activity number: CP-2021-09-04-00  Sub-recipient: Cape Girardeau Safe Comm.

**Planned Activity Description**

TRACTION - Teens Taking Action to Prevent Traffic Crashes is a peer-to-peer youth traffic safety leadership training program. High school students and advisors are invited to attend one of three training programs as a school team. The training promotes safe driving habits for youth including seat belt use, distracted driving and underage drinking and driving and provides students and their adult advisors with the motivation, information, skills, and support necessary to develop a plan of action that addresses unsafe driving habits through events and activities to be implemented within their school and communities the following year. The funding will provide staff, supplies, conference development and travel costs to conduct four conferences.

### Safe Kids Driver’s Education

Planned activity number: CP-2021-09-07-00  Sub-recipient: The Alliance of SW Missouri

**Planned Activity Description**

The Alliance of Southwest Missouri provides multifaceted safety education to children and youth in a four-county area: McDonald, Newton, Jasper, and Barton counties. Specifically, the Alliance does this through its Safe Kids program. The Alliance provides National Security Council-certified defensive driving courses, which compliment Missouri's driving requirements. This course is designed to teach drivers the rules of the road, safety precautions, and defensive strategies to help them drive as safely as possible.

The Alliance also provides driver's education to help students practice driving with a National Security Council-certified driving instructor. The goal of driver's education is to help students with driving permits acquire the necessary driving skills to prepare for and obtain a driver's
license. Funding will be used to partially fund a replacement driver’s education vehicle and brake installation and salary.

**ThinkFirst Missouri**

Planned activity number:   CP-2021-09-08-00  Sub-recipient: University of MO Curators

**Planned Activity Description**

ThinkFirst Missouri is an evidence-based trauma prevention program of the University of Missouri School of Medicine, Department of Physical Medicine & Rehabilitation. The mission of the program is to prevent traumatic injuries from unbuckled car crashes, especially traffic-related traumatic injuries, through education, research and advocacy. Missouri teens have the lowest safety belt usage rate. This program works to increase safety belt usage among teens. Funding will provide program development fees, educational materials and supplies, salary, speaker fees and travel expenses. This project also funds the First Impact program. First Impact is an evidence-based, traffic safety parent program targeted to parents and/or guardians of teen drivers in the pre-permit, permit or intermediate stage of licensure. The goal of First Impact is to reduce the number of motor vehicle fatalities, injuries and crashes among teen drivers by increasing parental awareness and enforcement of Missouri’s graduated driver license law. First Impact will provide the tools parents need to be involved in monitoring, coaching and supporting their new teen driver. Funding will be used to support travel, staff salary and program expenses.

**Traffic Safety Task Force Projects**

Planned activity number:   SA-2021-09-01-00  Sub-recipient: St. Joseph Safety & Health Council

**Planned Activity Description**

This safe community’s program in Missouri focuses efforts on seat belt education for all ages. This program meets the goals set by the HSO and helps to reduce unrestrained fatalities by focusing on low belt use areas and groups. Funding for this program will support travel expenses, salary and administration costs.
### Missouri SADD
Planned activity number: CP-2021-09-05-00   Sub-recipient: MO’s Youth Adult Alliance

**Planned Activity Description:**
Establishing more SADD chapters in schools and building capacity in existing chapters will enhance Missouri's potential to promote and improve traffic safety culture. However, much more could be done in teen empowerment, parental engagement, and community mobilization. Chapters can educate and assist with increasing safety belt use and decreasing distractions and impairments.

SADD chapters have existed in Missouri for years, however with improvements in technology, communications, and new leadership at the national level, the momentum and timing are perfect to grow this brand across Missouri. Having a state coordinator on the ground to provide programming and evaluation to support to the chapters is imperative. Missouri currently has 25 registered chapters and several nonregistered. SADD would employ a State Coordinator to oversee the creation, development, and support of new SADD chapters. Year one of this grant (FFY21) will be a building and pilot year. SADD would consider our baseline 25 in year one and work to have a total number of chapters greater than 30 by the end of FY21 or September 2021. SADD’s State Coordinator will work to grow the capacity of chapters, encouraging them to complete activities as described in the other goals. The three main goals of the SADD chapter are to change the traffic safety culture, advocate for Highway Safety legislation, and increase enforcement efforts.

### Docudrama Program
Planned activity number: TSP-2021-14-01-00   Sub-recipient: Regional ER Medical Services

**Planned Activity Description:**
One goal of the docudrama program led by the Regional Emergency Medical Services Department is to decrease fatalities on the roadways. They plan to educate the young drivers about the realistic consequences of driving impaired and/or distracted and to empower them to make safe decisions on the roadways. Another of their goals is to make safe driving education easier for schools to bring to their students.

Our plan to achieve our goals is education by facilitating docudramas, including mock car crashes. They will continue to educate the public about the dangers of distracted and impaired driving is until people are being killed on the roadways. They plan to reach the vulnerable roadway users before they start driving in hopes that they will continue to be safe in vehicles.
throughout their entire lives. They plan on making safe driving education easier for schools by doing the planning and organizing work for them.

Funding sources: FAST Act NHTSA 402
Eligible Use of Funds: Safe Communities (FAST)

**Distracted and Drowsy Driving**

Distracted and drowsy driving are diversions of the driver’s attention from activities critical to safe driving. There is a growing body of evidence which suggests driver distractions, both inside and outside of the vehicle, are becoming increasingly large contributors to traffic crashes. While many drivers drive distracted and drowsy, it is difficult for law enforcement to determine after a crash. Without specifically checking cell phone records (which requires a warrant), a crash is often attributed to other circumstances.

In 2015, the National Safety Council found that cell phones are involved in an estimated 27 percent of all car crashes. According to a recent Naturalistic Driving study by Virginia Tech Transportation Institute, a risk for being involved in a critical incident is 23 times greater if the driver texts while driving. During the last five years (2014-2018), 9 percent of Missouri fatal crashes involved a distracted driver. Twenty-three percent of the distracted drivers involved in fatal crashes in the last five years were between 15 and 24 years of age.

AAA published a report in 2014 which attributed 6% of all crashes and 21% of all fatal crashes were due to driver sleepiness and an even more recent report published by AAA just fourteen months ago estimated that a driver who obtained fewer than 4 hours of sleep the prior night was 11 times more likely to be involved in an automobile crash. Furthermore, AAA's 2015 poll reported 31.5% of adults surveyed admitting to driving drowsy within the past 30 days.

In Missouri, drowsy driving deaths have increased from 8 to 16 from 2012-2017 totaling 83 deaths with serious injuries increasing from 144 in 2012 to 160 in 2017 for a total of 870. Drowsy driving does have peak times throughout the 24 hour period with the main peak between 4 and 6 am and a secondary peak between 2 and 4 pm, crashes due to sleepiness occur at all times, day and night. Driving population most at risk for drowsy driving are teens, shift workers, people with untreated sleep disorders and police officers.

**Associated Performance Measures**

- C-1) Number of traffic fatalities (FARS)
- C-2) Number of serious injuries in traffic crashes (State crash data files)
- C-4) Number of unrestrained passenger vehicle occupant fatalities, all seat positions (FARS)
- C-6) Number of speeding-related fatalities (FARS)
- C-9) Number of drivers age 20 or younger involved in fatal crashes (FARS)

**Countermeasure Strategies:**

**Driving simulations**
Project Safety Impacts
Missouri crashes involving young drivers typically involve inexperience, distraction, and impairment. By utilizing hands-on and simulation-based training, young drivers will be given the opportunity to hone their driving skills while they are still in a controlled environment.

Linkage Between Program Area
Performance measures C-1 (Number of fatalities), C-2 (Number of serious injuries), C-4 (Number of unrestrained occupants), C-6 (Number of speeding-related fatalities), and C-9 (Number of drivers ages 20 or younger involved in fatal crashes) are directly impacted by this important skills training.

Rationale
Hands-on simulation and real-world scenarios provided by these skills trainings are vitally important in reducing fatal and serious injury crashes among teen drivers. An overall minimal amount of funding will have a lasting impact on numerous young Missouri drivers.

Communications and Outreach on Drowsy Driving
Project Safety Impacts
Education and presentations on factors that cause drowsy driving and what to do to prevent it will be conducted in school and businesses. This will help young drivers and employees who travel to understand the dangers behind this rapidly increasing issue so they can make better life and health choices to reduce instances of driving drowsy.

Linkage Between Program Area
Drowsy driving is rapidly becoming a bigger contributing circumstance in Missouri crashes, especially among younger drivers. Often, teens are not getting enough sleep due to extracurricular activities. However, gaming and social media are increasingly causing more and more teens to stay up late and then spend their awake time mentally exhausted. Due to this, crashes that result from drowsy driving are on the rise. In Missouri, drowsy driving related deaths increased from 19 (2014) to 21 (2018) totaling 92 deaths from 2014-2018. Serious injuries increased from 156 (2014) to 165 (2018), for a total of 777 from 2014-2018.

Rationale
TyREDD is currently the only organization in Missouri providing education and awareness for the prevention of drowsy driving to high schools and businesses.

Planned Activities in countermeasure strategies:

Teen Distracted Driving Prevention
Planned activity number: CP-2021-09-06-00 Sub-recipient: PEERS Foundation

Planned Activity Description
PEERS Augmented Reality Distracted Driving Education Simulator (ARDDES) training program provides educational programming to accompany the simulation and reinforce the training. Students ages 14-19 participate in one of six 1-hour training which includes a 10-minute informational session about distracted driving and seat belt use and video testimonies. During the presentation, students hear the details of one particular fatal crash caused by distracted driving and how it affected those whose loved ones were killed or disabled. Finally, they participate in a hands-on distracted driving experience in the ARDDES simulator. Because cell phones are not the only driving distraction, students experience numerous other distractions, including the radio, backseat passengers, and even things happening outside the car, while in the simulator.
Arrive Alive – Unite Corporation
Planned activity number: CP-2021-09-011-00 Sub-recipient: Arrive Alive – Unite Corporation

Planned Activity Description
Arrive Alive workshops are geared towards teenagers 15-19 (16-20) and will be held at high schools throughout the state. During each Arrive Alive event, 2 highly-trained facilitators guide students through a state-of-the-art virtual reality simulator. The simulator will allow participants to experience, in a controlled environment, the potential consequences of driving while distracted or impaired.

Each event will be approximately 6 hours in length and will average 25-30 students/hour in the driver's seat of the high-tech virtual reality simulator. For students not in the vehicle, high-definition monitors will be used to display the "passenger eye view" of the current simulation, as well as a high-impact awareness video featuring facts, statistics, and figures related to distracted and impaired driving.

TyREDD
Planned activity number: SA-2021-09-02-00 Sub-recipient: TyREDD

Planned Activity Description
The TyREDD program (Tyler Raising Education for Drowsy Driving) brings awareness of drowsy driving to teens, a topic that is very prevalent in teen lives, however, not discussed in many educational programs. The TyREDD mission is to raise awareness and provide education for the prevention of drowsy driving and the tragedies that can follow. Funding will be used to support travel expenses, speaker fees, and resource materials.
Evidence-based traffic safety enforcement program (TSEP)

Planned activities that collectively constitute an evidence-based traffic safety enforcement program (TSEP):

- 154 Impaired Driving Enforcement
- 402 HMV Enforcement
- 405d Impaired Driving Enforcement
- Enforcement-Drive Sober Campaign
- Enforcement-Occupant Protection Campaign
- Impaired Driving Law Enforcement Liaison
- OP and Speed Law Enforcement Liaison
- Occupant Protection Enforcement

Analysis of crashes, crash fatalities, and injuries in areas of highest risk:

**Crash Analysis**

Fatal and serious injury crash rankings are performed for all cities, counties, and the unincorporated areas in the state. These ranking are conducted for the problem areas of alcohol, speed, young drinking drivers, distracted, unbelted, under 21 years of age and older drivers. These rankings are also used in determining the overall severity of the problem for each respective location. Fatal and serious injury by county, city, and unincorporated county rank orders are located in the Crashes by City, County & Unincorporated County section of this report. Ranking by problem area can be found on the Missouri State Highway Patrol’s on-line State Traffic Accident System located at [https://www.mshp.dps.missouri.gov/MSHPWeb/SAC/stars_index.html](https://www.mshp.dps.missouri.gov/MSHPWeb/SAC/stars_index.html).

**Deployment of Resources**

Grant application workshops are held for potential applicants in five locations around the state. The purpose of the highway safety program and statewide goal are discussed at each workshop to help grantees understand how their efforts are imperative in order to impact the fatality and serious injury problem on Missouri highways. Law Enforcement (LE) program management staff participates in each workshop and offer assistance to agencies interested in submitting a grant.

Once applicants submit their applications into the Highway Safety Office Grant Management System, law enforcement program management staff reviews each application for their fatality / serious injury rankings. During this review, LE program managers assess the applications to determine their relevancy toward meeting the highway safety goals.

The LE program management team reviews their respective applications where the LE staff share supporting arguments and issues of concern recommending either to fully fund, partially fund or deny the LE applications. The reviewers take the same factors into consideration as where described in the Project Selection section of this document.

Once LE grant award decisions are made that best support the mission and work toward Missouri’s ultimate goal of zero traffic fatalities, grant award meetings are held in the fall at five locations around
the State. LE program managers provide a copy of the award, review subrecipient compliance requirements, address any questions and concerns, and network with any new and continuing grantees.

**Monitoring of Effectiveness of Enforcement Activities**

Program management staff reviews the results of various law enforcement initiatives/mobilizations. State, local and county LE agencies are encouraged to review their results and area crash data on a regular basis. Based upon these reviews, adjustments are made to operational plans to improve the activity’s effectiveness.

To monitor law enforcement participation in the NHTSA and LETSAC mobilizations, the Highway Safety and Traffic Division has three performance measures in their division tracker.

There are a number of measures listed throughout the HSP designed to track the progress of our law enforcement activities. The most important outcome involves a reduction in the number of fatalities and serious injuries occurring by crash type. These measures identify the number of participating agencies, number of hours worked, and the type and number of citation and warning tickets.

The Law Enforcement Traffic Safety Advisory Council (LETSAC) identifies quarterly impaired driving and occupant protection mobilization dates for each fiscal year. The LE program management staff and the Law Enforcement Liaisons aggressively seek participation in these mobilizations, as well as, the NHTSA required Drive Sober or Get Pulled Over and the Click It or Ticket mobilizations. Agencies are also encouraged to participate in the Distracted Driving Month enforcement activities.

DWI/Traffic Units are a key enforcement technique used to team with a city or county law enforcement agency to financially support DWI/Traffic Units. The HSO currently funds law enforcement activities for 11 units (some agencies fund their own units). The mission of these units is to focus on impaired drivers/high risk drivers and to aggressively enforce DWI and hazardous moving violations. Below is a list of the sub-recipients receiving funding for dedicated DWI and Traffic Enforcement:

- Joplin Police Department
- Greene County Sheriff’s Office
- Boone County Sheriff’s Office
- Columbia Police Department
- Jackson County Sheriff’s Office
- Jefferson County Sheriff’s Office
- Kansas City Board of Police Commissioners
- Franklin County Sheriff’s Office
- St. Louis County Police Department
- Platte County Sheriff’s Office
- Creve Coeur Police Department

Law Enforcement Task Forces/Councils have also been formed in many multiple city/county LE agencies and meet on a regular basis to plan and coordinate key enforcement activities. Several agencies have a shortage of personnel to conduct sobriety checkpoints and other enforcement initiatives. The task force concept provides the opportunity to pool resources to conduct more manpower intensive activities such as sobriety checkpoints or corridor projects. It also provides a forum for the LE officers to network and share traffic issues or concerns. Below is a list of the multi-jurisdictional task forces operating in Missouri:

- Southwest DWI Task Force (11 Agencies)
- Northwest Youth Alcohol Task Force (14 Agencies)
• Jackson County Traffic Safety Task Force (11 Agencies)
• Cass County STEP DWI Task Force (11 Agencies)
• Clay/Platte County DWI Task Force (14 Agencies)
• St. Louis Regional Traffic Safety Council Subcommittee of MCRS (50 Agencies)
• St. Charles County DWI Task Force (7 Agencies)
• Central Ozarks Regional DWI Task Force (19 Agencies)
• Law Enforcement Traffic Safety Advisory Council

High-visibility enforcement (HVE) strategies
Missouri continues to support and participate in the August DSOGPO campaign, Holiday impaired driving campaign, and Click-It-Or-Ticket campaign. In addition to these campaigns, Missouri has developed a youth seat belt enforcement campaign, Child Passenger Safety week enforcement campaign, and quarterly occupant protection, speed, and impaired driving campaigns to supplement the National HVE mobilizations.

Planned HVE strategies to support national mobilizations:

• Public Information and Education
• High Visibility Saturation Patrols
• Impaired Driving Law Enforcement Liaison
• OP and Speed Law Enforcement Liaison
• Short-term, High Visibility Seat Belt Law Enforcement

HVE planned activities:

• Enforcement-Drive Sober Campaign
• Enforcement-Occupant Protection Campaign
• Holiday Impaired Driving Campaign

COVID-19 exceptions and temporary changes
Missouri, like all other states, has experienced drastic changes to business plans due to the ongoing COVID-19 pandemic. As a result of the pandemic, the following changes have been implemented:

• Subrecipients will be urged to purchase refundable travel tickets, even if they are more expensive
• For travel booked but then cancelled, every effort will be made to use travel vouchers (issued in lieu of refunds) for similar highway-safety related functions. If this cannot be done, and a subrecipient uses the voucher for other travel purposes, then costs must be repaid to the Highway Safety Office
• Subrecipients that conduct training with costs covered by the Highway Safety Office will be permitted to lower class size in order to accommodate social distancing
• The Missouri Department of Transportation is requiring all staff to work remotely and refrain from in-person meetings or conferences until further notice. Due to this, all meetings, conferences, training, inventory inspection, projects requiring on-site monitoring, and any other office function that normally requires in-person contact will be done so in a virtual manner until travel restrictions are lifted. Subrecipients are allowed to make their own policy regarding in-person contact
