**Maintenance SharePoint**

![Maintenance SharePoint screenshot]

**Description**

The objective of this project was to share information through SharePoint in a consistent, organized and simple browser structure. The result was outstanding. All information throughout maintenance statewide is located in a consistent SharePoint format accessed by no more than three mouse clicks.

**Benefit**

Prior to the implementation of this SharePoint structure, each district had a different format for their maintenance SharePoint sites. When searching for information from more than one district, these varied formats lead to a loss of productivity. Now with the consistency among all districts and divisions maintenance, information from various districts can easily be found.
