

Never Flat Mower Tires

Description and Benefit

The Schulte mower upgrade uses heavy-duty skid steer wheel centers (½-inch thick) paired with hard rubber Never Flat tires, delivering significant cost savings and safety benefits. Compared to the original Schulte dealer tire and wheel costing \$1,200, the SMS option is \$585.17, and unlike foam-filled tires—which add \$307.50 per tire—the Never Flat tires require no foam fill. They are lighter and safer to handle at about 225 lbs. versus 400 lbs. for foam-filled tires, reducing strain on employees. Additionally, Never Flat tires eliminate downtime from flats, allowing continuous mowing and improving operational efficiency.
