Standard Drawing Guidance (do not show on plans):
- Replace "Skew" with actual skew angle.
- If the approach width is less than 18 ft, use a smooth edge (no sharp corners) and a taper.
- Specify typical 1/8" to 1/4" uniform thickness of the approach, ensuring it is not less than 10 in from the edge of the approach.
- For concrete approaches, use a minimum of 8" wide, and for asphalt, consider 12" wide, noting the required asphalt thickness.
- Ensure a minimum grade for the approach of 0.25%.
- Use standard approach slabs for the backslope, noting the height.
- For precast slabs, consider a minimum of 8" wide.
- For cast-in-place slabs, use a minimum of 8" wide and consider a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
- Use standard approach slabs for the backslope, with a minimum height of 12".
- For precast slabs, consider a minimum of 8" wide, with minimum grade of 0.25%.
- For cast-in-place slabs, use a minimum of 8" wide, ensuring a minimum grade of 0.25%.
