

Standard Drawing Guidance (do not show on plans):

To display the strand details open the reference files dialog box and activate the display option of the file with the description that best matches what is required by the design.

See EPG for actual length of B1 bars which vary by size.

The details of the coil ties are for closed diaphragms. Include additional detail at right for open diaphragms.

- ① This detail only needs to be used if the structure is over water. For all other crossings remove this detail.
- ② Remove if #5-B1 bars are used.
- ③ Use with integral end bents when the 2'-6" long tie rod is too long to maintain clearance to the outside face of the diaphragm. Remove if not required.
- ④ By design. Typically 30.98 kips per 1/2" strand & 43.94 kips per 0.6" strand, rounded to nearest whole kip.

General Notes:

Concrete for prestressed girders shall be Class A-1 with $f'c =$ psi and $f'ci =$ psi.

Use 1/2"Ø Grade 270 strands with an initial prestress force of kips. ④

Pretensioned members shall be in accordance with Sec 1029.

Fabricator shall be responsible for location and design of lifting devices.

Exterior and interior girders are the same except: coil ties, coil inserts for slab drains, holes for steel intermediate diaphragms.

For Girder Camber Diagram, see Sheet No. .

The 1 1/2"Ø holes shall be cast in the web for steel intermediate diaphragms. Drilling is not allowed. For location of holes and details of steel intermediate diaphragms, see Sheet No. .
