3354	ALLEN ROBERT CONSTRUCTION INC	\$3,000.00	30432106	4/16/1992	No	No

Description and Benefit

The Performance Bond Database is a secure, web-based system that modernizes MoDOT's management of performance bonds. Previously, bond data was stored in a Microsoft Access database accessible only to two individuals, with statewide staff relying on static monthly reports that often contain outdated information. This innovation provides real-time access to current bond data for all authorized users, eliminating manual report generation and improving transparency. Key benefits include immediate access to accurate information, reduced administrative workload, enhanced collaboration through a single source of truth, and simplified document viewing without paper files. By streamlining workflows and improving efficiency, the Performance Bond Database supports faster decision-making and strengthens accountability across the organization.
