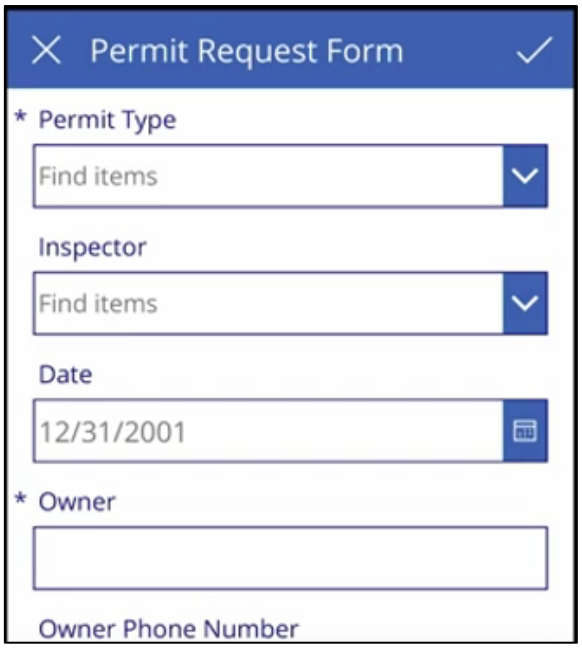
Permit and Lane Closure Application



Description and Benefit

This innovation is a Power App that has all of the information needed in it to submit a Lane Closure request or a permit request to traffic. It auto notifies our employees, and they can finalize them with these two apps. This helps save time and money by no longer needing to fill out hand written forms for permit requests. Work is simplified with the now automatic notifications for the people who will aid in the lane closure or permit requests.
