Portable Spreader Light

Description and Benefit

The Portable Spreader Light is a magnetic, preassembled plow light that plugs directly into a truck's trailer light connection, providing an instant solution when plow lights fail. Designed for quick installation, it can be mounted in seconds without wiring or troubleshooting, saving valuable time during snowstorms. This innovation enhances safety by ensuring continuous visibility of spreading material and assisting with backing, while eliminating the need to crawl around a snow-covered truck to locate issues. Affordable and easy to use, the Portable Spreader Light simplifies work for any operator, reduces downtime, and guarantees reliable lighting when it matters most.
