Project Management Microsoft Teams

Description and Benefit

This innovation streamlines project management by leveraging Microsoft Teams instead of email, eliminating inefficiencies like lost messages, missed deadlines, and inconsistent follow-up. Using Teams' Work Plan feature, tasks can be created, prioritized, assigned, and tracked with automated notifications and reminders, reducing assignment time from 25 minutes to just 5 and saving over 36 hours of project manager time. The approach simplifies coordination, improves compliance, and enhances statewide collaboration through real-time visibility and self-service updates. By transforming complex workflows into predictable, efficient processes, this model sets a new standard for future initiatives and demonstrates how technology can drive consistency and productivity.
