Description and Benefit

The Web Content Authoring Board audited Public Meeting information on MoDOT.org to improve customer satisfaction and service, leading to the creation of a custom content type and search view that delivers consistent, accessible information statewide. This solution links meeting details to specific projects, including location, date/time, and impacted routes, and offers robust search filters for convenience. By providing 24/7 self-service access and enabling comment submission, it reduces customer inquiries, saves time for staff, and fosters transparency and engagement. Since launch, the feature has generated 4,500 page views with an average engagement time three times the site average, reinforcing MoDOT's commitment to efficiency, trust, and exceptional customer service.
