General Notes:

All concrete surfaces of the existing steel piles shall be cleaned with a Type of Surface Preparation, coatings, excavation, and dewatering and any other incidental material or labor to complete pile encasement, as well as the contract unit price for Pile Encasement.

The reinforcing steel shall be epoxy coated Grade 60 with \( f_y = 60,000 \text{ psi} \). The reinforcing steel shall be Class B (\( f'c = 3000 \text{ psi} \)).

All concrete for pile encasement shall be Class B (\( f'c = 3000 \text{ psi} \)).

The reinforcing steel shall be epoxy coated Grade 60 with \( f_y = 60,000 \text{ psi} \). The reinforcing steel shall be Class B (\( f'c = 3000 \text{ psi} \)).

The reinforcing steel shall be epoxy coated Grade 60 with \( f_y = 60,000 \text{ psi} \). The reinforcing steel shall be Class B (\( f'c = 3000 \text{ psi} \)).

All exposed surfaces of the existing structural steel piles and plate girder sections, and sway bracing not being repaired. Use this note for coating any remaining piles or pile encasement, as well as the contract unit price for Pile Encasement.

If a seal is present on this sheet it has been electronically sealed and dated. (do not show on plans):

See EPG 751.40.1.2.1 for guidance on when coating, encasement or jacketing, and plating or partial replacement should be considered.

Detailed Notes: See this drawing is not to scale. Follow dimensions. Sheet No. 1 or 2.
