

Additional Information on RFP TR202007 Geotech Asset Management (GAM) Collection and Rating Program

Further details on App:

It would be preferential for the app to have the ability to have user controls such that some users would have full control and some users would have limited control.

It may be possible to have district staff assist with some data collection using a prototype app to provide feedback on the app development process.

Information from the Midwest Geotechnical Conference that could be helpful:

Athar Khan, Indiana DOT
