

TR202702 Anchorage Zone in Prestressed NU Girders – Questions and Answers

Q1: Can the DOT provide the range of concrete compressive strengths (release and design), concrete density, the reinforcement ratios, and distribution of NU girder sizes used in Missouri bridge projects to date?

A1: MoDOT has this information, but it is not readily available and will take time to query. It will be available in time for the project kickoff meeting (or shortly thereafter).

Q2: The RFP states “the Researcher must be on MoDOT’s Approved Consultant Pre-Qualification list and registered with MissouriBUYS (powered by MoVERS).” Does this pre-qualification list apply to the lead organization that MoDOT signs the contract with (say, university A or company A) or all team members including the lead organization and any sub-contracted team partners to the lead contracting organization?

A2: This applies just to the lead organization.
