I-70 at Prospect Ave.

I-70 at Benton Blvd

I-70 at 18th St.

I-70 at 23rd St.

Description and Benefit

The Traffic Cam Webpage Integration innovation embeds MoDOT's live-streaming traffic cameras directly into construction project web pages, eliminating the need for costly standalone cameras that only provide still images updated every 10–12 minutes. This approach offers real-time views of traffic impacts and construction progress in one convenient location, improving transparency and user experience. Since launching on the I-70 KC project page, this feature has become the most visited subpage, demonstrating strong public interest. The model can be replicated statewide for any project near existing traffic cameras, saving thousands in installation and service fees while enhancing communication with travelers.
