

Trash Vac

Description and Benefit

The Trash Vac is a mobile, gas-powered vacuum designed to quickly collect debris such as plastic bags, bottles, paper, and other trash. It saves time by vacuuming instead of manually picking up litter and can be used as a backpack or mounted on wheels to pull behind you. Easily transported in a UTV, it improves efficiency and safety by being self-contained, preventing contact with fluids or spillage. This innovation makes cleanup faster, cleaner, and more convenient.
