

Trauma Kit

Description and Benefit

This medical kit is designed to be accompanied with a brush/tree cutting crew, where the risks of life-threatening injuries due to chain saws are elevated. The kit provides tools available to reduce traumatic bleeding and injury. Our Trauma Kit provides essential first-aid tools to reduce and stop bleeding associated with traumatic injuries to control arterial bleeding, hemorrhaging or drawing chest wounds. Arterial bleeding is the highest risk associated with operation of a chain saw and chippers which can lead to unconsciousness in 20 seconds if not stopped. This trauma kit has lifesaving possibilities and is packaged in a durable, waterproof pelican hard case for job site durability.
