

INNOVATION EXCHANGE

Conversations Launching Change

Discussions targeted to Local Agencies, Tribes
and Federal Land Management Agencies Programs

Is slipping and sliding a problem on your roadway during a winter weather event?

Each year, many of our roadway transportation users are impacted by icy roads. Methods to help ensure safe travel on the roadway system before and after winter storm events include anti-icing with spraying brine and de-icing with plowing, use of sand to improve traction, and use of salt and chemical compounds.

Pickling the Roadways could be a strategy...

The use of salt and salt brines can help keep roads free of snow and ice, improving safety and mobility. To learn strategies that you can benefit from Roadway Brine usage to combat icy conditions before a winter weather event, sign up to participate in the upcoming webinar and learn weather-responsive strategies to manage the roadways.

EDC-5: Weather-Responsive Management Strategies: Roadway Brine Usage

Thursday, April 18, 2019
1:00 PM -2:30 PM [EST]

To join the webinar, participants **must register** to participate in the meeting room. Wherever possible, we encourage you to attend from a conference room where everyone can gather as a group.
