

Work Zone Sign Holder

Description and Benefit

The Work Zone Sign Holder installs on the back of the truck bed. It utilizes square tubing, a couple bolts and locknuts along with the top half of the sign easel. It slides easily over the tailgate and is snug enough it won't slide but utilizes a bolt knob to screw thru the sign holder and secure against the tailgate. It saves time and is easy to install placing the sign on the truck. The sign itself is more secure instead of using bungees to attach the sign. This saves money by less of a chance of the sign coming off and going down the road which is also safer for the traveling public.
