### STANDARD DRAWING GUIDANCE

To display the strand details when the design requires the strand to be bent in or out of alignment, the strand must be shown as bent to the design.

- Use the gap between the strands to indicate the bent position or orientation.
- This detail is only needed if the strand is bent to a different position or orientation.
- Remove if the strand is not bent.
- Use the gap between the strands. (see note on top of detail.)

### BEARING PLATE DETAILS

**Details Not Shown for Clarity.**

- **B1 Bar** (Typ.)
- **B2**
- **A1**

### END OF GIRDER

- **SHAPE 11**
- **END OF GIRDER**

### GIRDER DIMENSIONS

- **SHAPE 20**
- **SHAPE 9**

### END OF GIRDER

- **SHAPE 20**
- **SHAPE 9**

### STRAND ARRANGEMENTS

- **2-#6-C1**
- **2-#4-C1**
- **2-#4-D1** (Spaced as shown)
- **#X-A1**
- **#6-B2**

### LOCATION OF LIFTING LOOPS

- **Lifting Hole**
- **3" Vent Hole**
- **3/4" Chamfer**
- **2~6" long ***

### DETAILS OF COIL TIES

- **Coil Tie Rods**
  - **AT ALL BENTS**
  - **AT END BENTS**

- **Section A-A**
  - **Strands are not shown for clarity.**

### HALF ELEVATION OF GIRDER SPAN

- **Beams are not shown for clarity.**
- **End of Girder**

### DETAILS OF COIL TIES

- **Coil ties** are required to be 3/4" long and 1 1/2" minimum when used to reinforce or strengthen girder sections.

### DETAILS OF VENT HOLE

- **Please note location of all vents at end of girder.**
- **Vent hole** is located at the end of the girder to provide ventilation for slab drains and holes for steel intermediate diaphragms.

### DETAILS OF VENT HOLE

- **Vent hole** is located at the end of the girder to provide ventilation for slab drains and holes for steel intermediate diaphragms.

### GIRDER DIMENSIONS

- **SHAPE 20**
- **SHAPE 9**

### END OF GIRDER

- **SHAPE 11**
- **END OF GIRDER**

### STRAND DETAILS AT GIRDER ENDS

- **2-#6-C1**
- **2-#4-C1**
- **2-#4-D1** (Spaced as shown)
- **#X-A1**
- **#6-B2**

### LOCATION OF LIFTING LOOPS

- **Lifting Hole**
- **3" Vent Hole**
